FOREWORD

Almost everything they teach us about ancient history is wrong: the origin of man, civilizations and pyramids. Homo sapiens are not the result of evolution and biologists will never find a “missing link”, because intelligent man is a product of genetic engineering. Sumerians were not the beginning of civilized man, but rather the beginning of the most recent cycle of humanity. And finally, the original pyramids, the most superior and the oldest, were made by advanced builders who knew far more about energy, astronomy, sacred geometry and construction than we do.

In order to understand the ancient monuments, we need to view them through three realms: physical, energetic and spiritual. Our scientific instruments are simply not adequate to explain the purpose of the oldest pyramids. Mainstream scientists, archaeologists, historians and anthropologists with their rigid approach, are often the main obstacles to scientific progress.

The gap between physical and spiritual science needs to be bridged if we want to get a full understanding of the past.

The twelve-hundred-ton stone block in Baalbeck (Lebanon) needs an explanation. Who was able to shape, move and install four times bigger blocks than our, 21st century, capabilities? The Yonaguni megalithic monuments (Japan) belong to the previous cycle of humanity. They are undeniable proof, on the bottom of the Pacific floor, 80 meters below the ocean level, that advanced culture lived in the area more than 12.000 years ago and before huge quantities of ice melted and caused Pacific level to rise by 80 meters. Machu Picchu (Peru) tells the story of four distinctive civilizations and different construction styles, the first civilization being the most advanced. At the same time, all the history books make up stories of Incas being the builders of their “royal retreat” in the recent times. New dating of the oldest and superior Peruvian, Mexican, Chinese and Egyptian pyramids will take us back far before recognized history and known rulers. The same goes for the “unrecognized” and/or uncovered pyramids in Mauritius, Canary Islands, Tahiti, Australia, Amazon, Crete, South Africa, Cambodia, Italy or Indonesia.

The oldest Chinese and Egyptian pyramids are much superior to those made later as unsuccessful replicas. The older structures are built from granite, limestone and sandstone blocks, more recent ones are much smaller and built from mud-bricks. Traces of more advanced beings are everywhere around us. In the meantime, mainstream scientists try to fit those monuments into their time coordinates, falsifying the truth.

Two hundred Cahokia pyramids in the USA show astronomical knowledge of the builders who moved several million tons of construction materials and who knew the difference between cosmic and magnetic north. The Mayan world (Central America) is an example of the knowledge of the Universe. Our Solar system circles the Milky Way and the 26-thousand-year cycle (“long count calendar”) affects all living life on our planet. The Anasazi’s, ancestors of the Pueblo Indians (Southern USA), didn’t need an alphabet or physical means of communication means to recognize danger in different dimensions coming from the depth of Universe.

As long as they stay within the box, mainstream archaeologists will never be able to explain the tooling and logistics needed to build the stone heads on Easter Islands, the machined granite blocks of the Akapana pyramid complex in Bolivia or the function of the chambers in the Giza pyramids.

The stone spheres of western Mexico, southern Costa Rica, Easter Island or twenty locations in remote Bosnia-Herzegovina, are obvious proof of understanding and manipulating shapes and energy fields in the distant past.

On top of all that, the discovery of the Bosnian Valley of the Pyramids is telling us that we don’t know our planet. We might go to the Moon, but we still need to explore our Mother Earth. More secrets wait to be uncovered and the ancient knowledge will help us restore our balance.

———— 2005 – 2013 ————

Mystery of the Bosnian Valley of Pyramids

CHAPTER 1.

EIGHT ELEMENTS TO CHANGE HISTORY

I wrote in earlier books how I discovered the Bosnian Pyramids in April 2005. Very often others ask me how people who live in Visoko have never noticed such proper geometry, particularly of the Bosnian Pyramid of the Sun. The answer is they have noticed, but none of them dared to claim that this was an artificial structure covered by deposits of soil and vegetation. There are more reasons for this: first, nobody in this region has dealt with pyramids or has any experience in this field; second, these are unusually large structures, and third, because of the extreme age of the pyramids, the geological and archaeological layers are mixed.

My hypothesis in 2005 and the Geo-archaeological research that followed confirmed the global importance of the discovery of Bosnian pyramids. By scientific investigation that involved numerous experts and researchers, we proved a few key things that change the picture of the past of mankind:

1. Discovery of the first European pyramids.
2. These pyramids are the largest in the world (Bosnian Pyramid of the Sun with a height of 220 meters is higher than Cheops, which is 147 meters high).
3. They are potentially the oldest pyramids in the world.
4. We prove the existence of the oldest and the highest quality concrete in the world.
5. We find the largest ever network of underground tunnels and rooms beneath a pyramid complex.
6. We show the existence of the largest ceramic sculptures.
7. We discover signs of a very ancient literacy.
8. We record, with precise measurement instruments, the presence of focused electromagnetic radiation.

1. It may take twenty years for the world to understand the significance of this discovery in Bosnia-Herzegovina. How did Bosnia-Herzegovina and the scientific community worldwide respond to this? Several local archaeologists, historians and geologists immediately rejected the hypothesis, claiming that it is impossible to find pyramids in Bosnia since they are only built in Egypt and Mexico. Of course, the scientific approach requires the examination of evidence and experimentation. This has been our approach from the beginning of the project. Our opponents, at the same time, feverishly wrote petitions seeking to stop the research. When you combine their lack of knowledge, lack of cultural manners and jealousy, you get an explosive mixture. And that is what we have here, on the part of the part of cultural establishment in Bosnia-Herzegovina. Of course, there are also scientists who have joined the project voluntarily with goodwill, demonstrating scientific dignity and civil courage.

On a broader scale, the elite circles worldwide saw that this scientific research, allows arguments which prove the continuity of civilizations in the territory of Bosnia-Herzegovina, and that is beyond their control. Anthropological genetics proved that advanced human communities had been present on this territory from 35,000 years ago, and that makes Bosnia the second oldest cultural oasis in Europe.

The discovery of ceramic megaliths belongs to that period. The discovery of pyramids belongs to the pre-glacial period from 12,000 years ago, and this leads us directly to a connection with the previous human civilization's cycle of development. This is a milestone in the vision of world history. With the example of the Bosnian Pyramids, we prove that developed civilizations existed considerably earlier than we were told. And we also prove research can be conducted, not only by institutions from London, Paris or New York, but also by independent foundations headed by volunteers, those who love research and love Bosnia-Herzegovina. For many, it was too much, and they did everything to stop us.

2. Egypt, Mexico, Peru and China are cradles of human civilization. Now to this list we must add Bosnia-Herzegovina and Spain (Basques). From the small, restless, war-ravaged country, we get a territory that is a superpower on the world archaeological map. When the state financially backs this project, when the Bosnian Pyramid of the Sun and the Moon are excavated, as well as the tumulus in

Vratnica, when the network of underground tunnels is secured and supported, we will have millions of tourists every year. They will bring a billion dollars to Bosnia-Herzegovina which will launch archaeological tourism, trade, infrastructure development, hotel management, food production, furniture production, and so forth. The economy will rely on this project. From changed schoolbooks, new generations will learn the true history, the one of which we can be proud. It is not true that the Balkans were settled by “primitive barbarian Slavs in the 7th Century” as we were constantly taught by the West, but the indigenous civilization spread from the Balkans towards Europe. Two-thirds of Bosnians and Herzegovinians are descendants of the first European people who came into the territory of today’s Bosnia, Herzegovina, Dalmatia and the Croatian islands. Descendants of Slavs make up only ten percent.

3. On my travels and in my research of thousands of pyramids around the world, from Peru and Bolivia to Mexico, Guatemala, Honduras, El Salvador, through the Canary Islands to Egypt and Mauritius and China, I noticed that there are common elements for most pyramids: The geometry, the orientation of the sides toward the cardinal points of the world or the Sun movement, a local construction material, inner passageways and chambers, an astronomical connection, and an underground network of tunnels. In the case of the Bosnian Valley of the Pyramids, all these elements exist.

The geometry of the Bosnian Pyramid of the Sun and its proper orientation toward the cardinal points is proven by the research of engineer surveyor Buza Enver and his team from the Geodetic Institute of Bosnia and Herzegovina and by satellite records made by geophysicist Dr. Amer Smalbegovic. The existence of an equilateral triangle formed by the Pyramids of the Sun, Moon and Dragon is also confirmed by the Cadastral Department of the Municipality of Visoko on topographic maps.

Aerial footage of the Bosnian Pyramid of the Sun; triangular sides and edges between sides are visible. Sides match the cardinal points.

4. The presence of building material, artificial concrete, on the Pyramid of the Sun and shaped sandstone slabs at Bosnian Pyramid of the Moon is confirmed by experts of six institutions for Material Science. Even the world's leading expert in Materials Science, the founder of the Institute for Polymers, Dr. Joseph Davidovits, after microscopic analysis, concluded that it was artificial cemented concrete.

5. The world's leading Egyptologist, discoverer of four pyramids in Egypt, Dr. Nabil Swelim, after two years of research in Visoko, made an archaeological report which claimed that "The Bosnian Pyramid of the Sun is the largest pyramid in the world." During their visit to Visoko, the same was confirmed by professors from the Faculty of Archaeology in Cairo, Dr. Mona Ali and Dr. Sol Iman Hamed. Egyptian geologist Dr. Ali Barakat, after a 42-day research visit in Visoko, concluded that the Bosnian Pyramid of the Sun was a man-made pyramid which is shaped by man and formed by blocks.

Russian academician and geophysicist Dr. Oleg Khavroshkin, after two years of research with his team, concluded that the “Bosnian Pyramids, by their form and content, correspond to the Egyptian pyramids.” Geo-radar imaging of the Bosnian Pyramid of the Sun and tumulus in Vratnica by the German team of geophysicists from the company LGA Bautechnik with Dr. Andreas Hasenstab as a leader, and, after them, geophysicists from the Serbian Institute of Physics of University in Belgrade with Dr. Dejan Vuckovic as a leader, concluded that under layers of earth there are tens of anomalies that cannot be explained by the action of nature. They established the existence of continuous walls of the pyramid, shaped disposed blocks, and inner passageways.

The Radiocarbon Laboratory of the University of Uppsala, Sweden, the German University of Kiel and the Polish University of Technology in Gliwice, analyzed a series of samples of organic material, and confirmed that human activities in an underground labyrinth in Visoko are older than all advanced cultures in the territory of Bosnia and Herzegovina. Dr. Husnija Resulović from the Federal Institute for Agro-pedology led the team of experts who analyzed the soil that covers the pyramids and concluded that they have been covered for more than 12,000 years. Dr. Ivan Šimatovio from Croatia, by analyzing the edges of the pyramids, indisputably proved their artificial character. Geological maps of Bosnia-Herzegovina show that tectonic movements in Visoko valley took place in a different direction from the pyramid sides, therefore it could not occur naturally.

Vast quantities of building materials used in the construction of these buildings were available in the nearby area: A conglomerate that was thrown out of the tunnel was used for concrete blocks, and clay and lime were used as binders, which were heated at moderate temperatures. Biologist and academician Sulejman Redžić proved that the temperature of the Bosnian Pyramid of the Sun is higher by five degrees than natural hills, due to the existence of internal passages, and Mediterranean crops are growing on its surface. It also emphasizes that pine roots, which can easily go through natural stone, do not go through the cemented concrete on exterior walls of the Bosnian Pyramid of the Sun.

In addition, satellite radar images have shown the presence of underground inner passageways on the northern side of the Pyramid of the Sun.

I could go on and on, but the essence is that never, in the history of this part of Europe, has one archaeological project had such a multidisciplinary approach with the participation of tens of scientific and educational institutions and individuals.

To this impressive list we should add the first International Scientific Conference on the Bosnian Valley of Pyramids, which was organized in the summer of 2008, when 55 of the world's leading scientists backed up the project of the Foundation with a statement that these are archaeological, and not natural, phenomenon in Visoko.

The construction complex of the Bosnian Valley of the Pyramids includes Bosnian Pyramids of the Sun, Moon, Dragon, Earth, and Love. Below the pyramid complex there is an underground network of tunnels and chambers. In the wider area environment, there are stepped structures, a tumulus, and other constructions. Three main pyramids (Sun, Moon, Dragon) form an equilateral triangle with mutual distance between their peaks of 2180 meters.

Illustration of an equilateral triangle between the Pyramid of the Sun, Moon and Dragon

Artifact made from two types of stone found in the Bosnian Pyramid of the Dragon

Stone panel found on the access plateau of the Bosnian Pyramid of the Sun with engraved signs

Fine ceramic pyramid found by German archaeologists in 2008, in the 6-7,000-year-old cultural layer, near the Bosnian Pyramid of the Sun.

Sacred Geometry of the Bosnian Valley of the Pyramids: The Sun, Moon and Dragon form an equilateral triangle in which there is a second triangle formed by pyramids of Earth and Love and River Fojnica.

Three-dimensional topographic map from the Geodetic Institute of Bosnia and Herzegovina shows The Bosnian Pyramid of the Sun with the access plateau which leads to the top of the pyramid.

Distinct edges of the pyramid with the access plateau which was paved with sandstone; at the junction of the pyramid and the plateau, material changes and sandstone give way to the concrete cover of the pyramid.

Start of uncovering of northeastern edge of the Bosnian Pyramid of the Sun in July 2006

Bosnian Pyramid of the Moon is taller than 190 meters. Its three sides are properly oriented (north-west-south) and on the east side there is a paved plateau longer than 150 meters. This pyramid does not have a role model in the world and can be called the first “terraced” pyramid. It is formed by a combination of cut rectangular slabs of sand- stone and clay.

Volunteers uncover concrete blocks of the Bosnian Pyramid of the Sun in June 2006.

Bosnian Pyramid of the Moon is covered with deposits of soil and vegetation.

Rectangular stone structure at the foot of the western side of the Bosnian Pyramid of the Moon

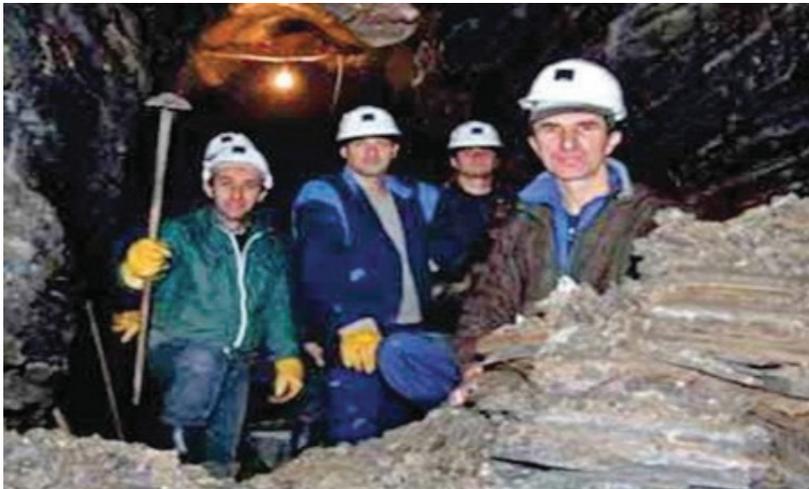

Properly cut and installed sandstone slabs on the western side of the Bosnian Pyramid of the Moon. Profile of the wall of Bosnian Pyramid of the Moon at its peak, the alternation of rows of blocks with rows of clay that was used as a binder, insulation and waterproof materials is evident

Only one kilometer south of the Bosnian Pyramid of the Sun, between two rivers (Bosnia and Fojnica) there is the entrance to the KTKII underground tunnel. The height of the tunnel is 3 meters, and the width is 2.5 meters. The tunnel extends to the northern side of the Pyramid, but due to water penetration, work in it is temporarily stopped.

Section of the wall at the top of the Bosnian Pyramid of the Moon. There is a layer of the clay between the rows of the shaped blocks. Clay is excellent natural construction material and was used as insulation, waterproof material, binder and gives flexibility to the construction.

The process of cleaning and securing of passageways in KTK tunnel

Fragments of a stone circle found in underground tunnels KIK

Four kilometers away from the Bosnian Pyramids, there is a U-like elevation, similar to a tumulus. Underground geo-radar footage revealed the existence of a series of stone terraces and underground passages. Archaeological excavations revealed the existence of the largest stone blocks in this part of Europe. These are double layer artificial blocks

Section of underground tunnels KTK

of very high strength. In the foundations of this structure, there is a concrete slab beneath which, according to probe drilling, are rooms.

Tumulus in Vratnica with a height of 32 meters

Excavation of one megalith terrace at Tumulus

Tumulus Megalith terrace is made of two-layer megalith blocks

Stone foot with replicas of five toes found in megalith terrace under one meter of soil in Vratnica

Stone tool from the sandstone found in one meter of depth of Tumulus in Vratnica

Mold discovered in underground labyrinth “Ravne”

CHAPTER 2.

SIX RADIOCARBON ANALYSIS DETERMINED THE AGE OF UNDERGROUND LABYRINTH “RAVNE”

In my book *The Bosnian Pyramid of the Sun*—the discovery of the first European pyramid (Sarajevo, 2005), I wrote that under the pyramids in Visoko, we will discover an underground tunnel network of passages and chambers. My hypothesis was met by rejection by parts of cultural establishment.

But that’s exactly what happened. Several hundred meters of tunnel route that leads to the Bosnian Pyramid of the Sun was cleared and secured for visits of tens of thousands of researchers and tourists in the period 2005 to 2010. The distance from the tunnel’s entrance to the Bosnian Pyramid of the Sun is almost three kilometers, so the processes of wall supporting, and research will continue over the next few years.

At the foot of the tunnels we discovered organic materials, and inside passages we found stalactites and stalagmites whose age can be determined by radiocarbon methods. Six samples were sent to three leading European laboratories in Sweden, Germany, and Poland.

The network of underground tunnels was built in conglomerate layers that were deposited over the course of tens of thousands of years. In the wall of the conglomerate, we discovered a piece of wood, dimensions 35 x 18 x 12 centimeters. From one sample, the age was determined at the Department for Radioisotopes in the Institute of Physics of Silesian University in Gliwice (Poland). Head of department Dr. Anna Pazdur signed a report in which the estimated age is 34,000 years (+/-1,500 years). Dr. Pazdur announced this news at a press conference during the First International Scientific Conference on Bosnian Valley of the Pyramids in August 2008. Another sample of the same wood was analyzed by a Leibnitz laboratory for radiometric dating and study of stable isotopes at Christian-Albrecht University in German Kiel, and the estimated age is 30,600 years (+540/-510 years).

So, in this way, the beginning of the process of creating a conglomerate is estimated at more than 30,000 years.

The megalithic blocks were discovered under the layers of conglomerate, so it was logical to conclude that they were older than the beginning of the conglomerate-making process. These blocks were sitting on very hard clay, which is natural bedding. So, somebody brought or made these blocks here over 30,000 years ago! It seems that the first megalithic culture in this area dates from the Paleolithic period. This fully coincides with the new results of anthropological genetics that place the first immigration wave of Homo sapiens towards the Balkan area in the period of 35,000 years in the past.

The next series of the analyzed material was found in the side passages. These are stalagmites and stalactites. They were created in already existing tunnels. After the disappearance of builders, some sections of the underground tunnel passages collapsed. In these areas stalactites and stalagmites were formed.

A sample of stalagmites from the first side passage, at a distance of 25 meters from the entrance, produced an estimated age of 5080 years (+/-75 years) at the Institute of Physics, Silesian University in Gliwice, while the sample of stalactite showed an age of 3560 years (+/-65 years). So, the minimum age of the tunnel is estimated at more than 5,000 years! Stalagmites could have been formed only in existing cavities or passageways. In this way, the tunnel complex in Visoko far exceeds the age of other cultures on the territory of Bosnia and Herzegovina from the past: The medieval Bosnian kingdom (900 years), Ancient Rome (2000 years), Ancient Greece (2500 years), the Illyrian tribes (2800 years) and Butmir Culture (4,600 years). Therefore, it is a completely new and sensational discovery on a global scale.

Evidence of the existence of a third culture was also found. Their members closed all tunnel passageways and filled them using river gravel material. At each junction, they made walls that were composed from river pebbles. Prior to that, they systematically cleaned up all tunnel passages and premises of the tools, bones and other archaeological artifacts that belonged to the tunnel builders.

At the foot of tunnel walls, the Foundation team found the remains of a fireplace. Samples of organic materials were sent for radiocarbon analysis to Sweden and Poland. The laboratory for analysis of age at University of Uppsala (The Angstrom Laboratory) found that the organic sample found in August 2009 at 180 meters from the entrance is 3091 years old (+/-111 years).

Testing of other samples, found in the summer of 2008, was carried out by AMS (Accelerator Mass Spectrometry) method at the Institute of Physics of Silesian University in Gliwice. During AMS dating, researchers use the spectrometer to count all the C14 atoms, unlike traditional methods of numbering which count only C14 atoms which are about to disintegrate. Therefore, the AMS method is more precise but also more expensive. The research performed in this prestigious Polish laboratory showed that this organic material was 4610 years old (+/-35 years).

That way, we concluded that the underground tunnels in Visoko were occasionally visited by members of the Neolithic culture in the period between 3000 to 4600 years ago.

Accordingly, six radiocarbon dating's confirm that, at the territory of central Bosnia and Herzegovina, at least four cultures left their trace:

1. The oldest, Paleolithic culture that transferred megalith blocks and placed them over underground water flows, older than 30,000 years.
2. The builders of pyramids and tunnel complexes, also the most advanced culture, older than 5000 years, and younger than 30,000 years.
3. The culture that closed tunnel passes, capable of transferring large quantities of material, less than 5000 years old.
4. Occasional Neolithic users of entrance part of the tunnel complex, during the period from 3000-4600 ago.

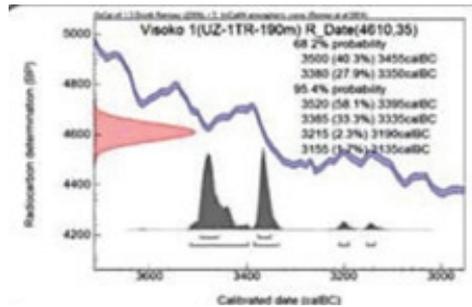

The Professional Team of the Foundation ‘Archaeological Park: Bosnian Pyramid of the Sun’ carefully nurtured a multidisciplinary and scientific approach to the research project of the Bosnian Pyramid Valley. During five archaeological seasons (2005 to 2010), the study included the most eminent scientific institutes, educational institutions, and individual researchers. With such practice, the Foundation will continue in the future.

The first piece of organic material found in the conglomerate that covers stone blocks and whose age is estimated at more than 30,000 years

Samples of organic material from the underground maze ‘Ravne: duly marked and sent to radiocarbon analysis at leading European laboratories

Testing of samples of organic material from the underground complex Ravne' in Visoko were carried out by AMS (Accelerator Mass Spectrometry) method and showed that the estimated age is 4610 years (+ 1-35 years).

The sample of organic material from the underground complex 'Ravne' was sent to the leading Swedish laboratory for age determination (The Angstrom Laboratory) at the University Uppsala. After proceeding with the carbon method test to determine the age, the results showed that the sample was 3091 years old (+ 1-111 years).

Discovery of megalith K-2 below conglomerate deposits. The first culture is more than 30,000 years old and they placed megalith blocks in these locations.

A second culture constructed the tunnel complex and pyramids. This culture is more than 5080 years old, and less than 30,000 years.

The third culture closed all tunnel passages and systematically cleaned them less than 5000 years ago.

Neolithic man used available tunnel passages 3091 to 4600 BCE

One of the tunnel sections dug up in conglomerate

CHAPTER 3.

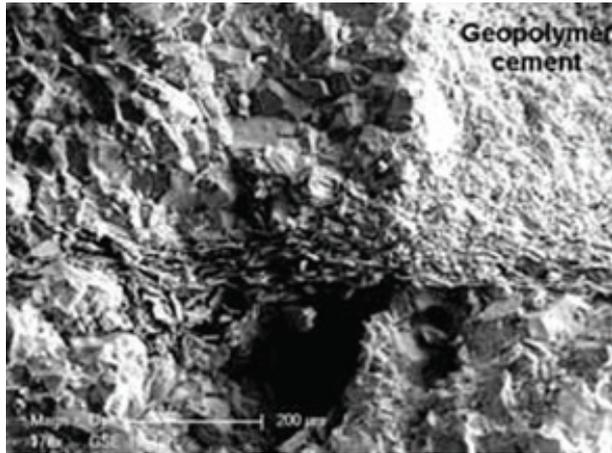

DEFINITIVE CONFIRMATION:

CONCRETE IN THE BOSNIAN VALLEY OF PYRAMIDS

The founder of the French Institute for Polymers, Joseph Davidovits, Ph.D. sent the results of electronic microscopic analysis to the Foundation ‘Archaeological Park: Bosnian Pyramid of the Sun.’ In a letter, Dr. Davidovits emphasizes: “After the analysis of the sample I have found the chemical composition of this ancient concrete. The basis is calcium / potassium geopolymer cement.”

Professor Davidovits is an expert in the science of materials and is the author of more than 50 patents in this field. He has published ten books on the construction of the pyramids in Egypt and he is the holder of the French Medal of merit.’ I met with Davidovits at the International Conference in Edinburgh in October 2008, when I gave him the sample of material from the Bosnian Valley of Pyramids.

Particularly interesting is the location of the sample which was analyzed by Professor Davidovits. At the request of the Foundation during 2008, a company from Tuzla “Geoprojekt” performed a geological probe, drilling on a stone Tumulus in Vratnica (Municipality of Visoko). At this location, blocks with a textured surface had previously been discovered and they are identical to plates on the Bosnian Pyramid of the Moon. During probe drilling, it was discovered that, at a depth of 54 meters, there was a block two meters thick, below which there is an empty space or, possibly, a room four meters high. Geologist on the project, Professor Dr. Let Kubat, in his report called a sample of this block a “fine grain concrete” and Professor Davidovits named it “geopolymer cemented concrete.”

An electron microscope at the French Institute for geopolymer shows that the pattern from the Bosnian Valley of Pyramids is ancient cement concrete.

The scientific analysis at the University of Zenica of the structure and properties of materials by Professor Dr. Muhamed Pasic, a researcher in the field of chemistry, is especially important. He analyzed nearly one hundred samples of materials from pyramids and published an article “A Contribution to the characterization of solid building material from gravel conglomerate from the Bosnian Pyramid of the Sun, Visoko.”

He emphasizes results of tests of the Bosnian Pyramid of the Sun:

“From a representative sample of covering layer that covers all four sides of the Bosnian pyramid Sun, and that part of the surface layer with gravel granulation, cubes with 5cm edge were prepared by method of mechanical cuffing. Their compressive strength was measured (f p) and individual results were obtained:

$$f p = 116.0, 1318 \text{ and } 94.0 \text{ Mpa.}$$

Obtained results are considerably higher than the results of the same type of construction material from the bore at the archaeological site Toprakalija, Upper Vratnica (34.6 MPa) which were done by the Metallurgy Institute Zenica. The results of tests that were independently conducted by Institute for Materials and constructions of Engineering Faculty were higher than these (67.18 MPa).

Concrete blocks on the north side of the Bosnian Pyramid of the Sun

The builders of a culture's ancient dwellings, with multi-millennia experience about the characteristics of natural materials, as well as the builders of today's civilization, have produced artificial construction materials and installed them into buildings of various architectural forms. For this material, they used different granulations of gravel that was, at the time, abundantly available. As binders, they knew the characteristics of natural materials, especially clay, its plasticity, and

hygroscopy, as well as the fact that crushed clay, when mixed with water, has binding ability. The second type of binding material which was used by builders in order to connect grains of gravel was hydrated lime. They knew the production of calcite and dolomite lime. The evidence is the fact that in the structure of gravel conglomerate at the Bosnian Pyramid of the Sun, separate crystals of CaCO_3 and MgCo_3 were discovered.

These two binders were used to produce one of two basic building materials. One of these materials is thin grain stone sandstone - a natural sedimentary aggregation, which is easily cleaved in moist conditions, easily processed, formed, and used. The other material is gravel artificial material. This gravel composition reminds one, because of its appearance, of today's cement concrete made from gravel aggregate. By its structure, the massive texture and different compressive strength, it is the same as today's industrial concrete, with a wide range of compressive strengths, brands of concrete, and in some examples (Bosnian Pyramid of the Sun) exceeds by far the strength of today's cement concrete.

Layout of crushed test cubes of building material of covering layer at Bosnian Pyramid of the Sun, after the compressive strength test

Separation of binding mass from gravel in this gravel conglomerate from the Bosnian Pyramid of Sun is very difficult and must be done in boiling water.

The adhesive force of the binder with grains of gravel is much stronger compared to the same type of building material from remaining archaeological sites. The force is so strong that it is stronger than the forces that govern the grains of solid material of calcite gravel, and which is best shown on the parts of fragmentation after the action of compression force. The boulders (beads) of gravel break down. This is best seen on the spot, at excavation sites at the bottom of the Bosnian Pyramid of the Sun.

Tectonic forces on megalith blocks of this building material replaced the compression force at excavations. This phenomenon reinforces the claim that this material is an artificial, not natural, phenomenon. The volume mass (V_m) and density (p) of this hard and solid, compact artificial material and obtained values are:

$$V_m = 2.68 \text{ kg / dm}^3 \quad p = 2.71 \text{ g / cm}^3$$

These slight differences between the density and volume density (0.03) are in favor of a massive texture of building materials with negligible porosity.

The attempt to separate binder from the gravel was carried out in diluted acetic acid but without success. Finally, the physical separation of binder from the sample with crushed negligible content of gravel as aggregate was done. The resulting concentrate of binder is ground and subjected to chemical analysis.

Content in %										
g.ž.	SiO ₂	CaO	MgO	Fe ₂ O ₃	MnO	Al ₂ O ₃	TiO ₂	Na ₂ O	K ₂ O	Suma

Chemical analysis of the separated binder of artificial building material of thin grain gravel conglomerate from Bosnian Pyramid of the Sun—Visoko

This hardened mineral formation has in its composition, except for CaCO₃ and MgCO₃, also individual minerals of the system: CaO-SiO₂, CaO-Al₂O₃ - SiO₂ and CaO-Al₂O₃-Fe₂O₃-SiO₂ which exceed 100 Mpa by the compressive strength. It is an extremely high compressive rigidity of concrete. Such concrete is not produced in our country, but only in a few highly developed countries, at special request. Masters of ancient cultures produced it, by pouring into molds, and after hardening, hard tool blades for chopping of wet megalith sandstones from these binders (adobe clay and calcite or dolomite lime). For the production of tools, builders from this ancient culture used hardwood, like today's pit oak and walnut then formed it into the blade. The proof is a broken tip of a wooden blade that was found in a stone panel of paved area at the foot of the Bosnian Pyramid of the Moon [1]. Over time, the three carbonized. Mass building materials used by the ancient cultures' constructors was gravel conglomerate. It was prepared on the spot in the state of a near-liquid. It consists of the gravel slurry, a binder and water, and after the preparation of mash (fresh concrete or mortar) it was cast in sandstone slabs on the Bosnian Pyramid of the Sun"

Concrete blocks on northern side of the Bosnian Pyramid of the Sun are located below 80 cm of soil layer.

CHAPTER 4.

CONCLUSIONS OF THE FIRST INTERNATIONAL SCIENTIFIC CONFERENCE ON BOSNIAN VALLEY OF THE PYRAMIDS

In Sarajevo and Visoko, the First International Scientific Conference on Bosnian Valley of Pyramids was held from August 24-31, 2008. The conference was attended by 55 experts from Egypt, Saudi Arabia, China, Russia, Poland, Great Britain, Hungary, Austria, Italy, Croatia, Montenegro and Bosnia and Herzegovina. A number of prominent archaeologists, geologists, physicists, Egyptologists, geophysicists, chemists, planners, architects, surveyors, and other experts presented their works. The Committee on the recommendation included:

- Dr. Nabil Swelim, Egyptologist and archaeologist, President of ICBP Conference
- Dr. Oleg Khavroshkin, geophysicist, Chairman of the Scientific Committee of the Conference
- Dr. Alaa Shaheen, archaeologist, Dean of the Faculty of Archaeology in Cairo
- Dr. Hassan El-Saady, historian, Dean of the Faculty of Arts, University of Alexandria
- Dr. Anna Pazdur, physician, chief of the Laboratory for Radiocarbon Testing, Silesian University, Gliwice, Poland
- Dr. Mona Haggag, archaeologist, Secretary General of the Association of Archaeologists, Alexandria, Egypt
- Dr. Ivan Simatovic, Chairman of the Organizing Committee of the ICBP Conference, Croatia
- Dr. Mostafa El-Abadi, historian and archaeologist, consultant director of the Alexandria Library, Egypt
- Chris Norman, planner from Edinburgh, United Kingdom
- Dr. Sam Osmanagich, founder of the Foundation “Archaeological Park: Bosnian Pyramid of the Sun” and Vice President of the ICBP Conference.

The Committee formulated a proposal on August 28, 2008, which was adopted by all participants of ICBP conference on August 29, 2008, during the plenary session.

CONCLUSIONS / RECOMMENDATIONS

We, participants of the First International Scientific Conference on the Bosnian Valley of the Pyramids (ICBP2008), conclude the following:

1. The work on the archaeological location “Bosnian Valley of Pyramids” in Visoko, Bosnia and Herzegovina is important geo-archaeological and epigraphic research that requires continuation of a multidisciplinary scientific approach that will answer the question of the origin of the Bosnian pyramids and a network of underground tunnels and other archaeological locations in the vicinity.
2. ICBP Conference recommends that the Second International Scientific Conference on Bosnian Valley of Pyramids be held in Sarajevo in two years (2010) in the presence of experts for exploration of pyramids from around the world.
3. ICBP Conference recommends the establishment of the Center for the research of pyramids with its headquarters in Sarajevo.
4. ICBP Conference recommends to universities in Bosnia and Herzegovina the introduction of postgraduate studies in the field of archeology as a support to the research project “Bosnian Valley of the Pyramids.”

CHAPTER 5.

ITALIAN INSTITUTE CONFIRMED EXISTENCE OF ARTIFICIAL CONCRETE

A leading Italian institution in the field of chemical engineering, civil engineering, and architectural research, “Politecnico di Torino”, analyzed samples of stone blocks from the Bosnian pyramid of Sun in Visoko. In September 2009, during the visit to archaeological sites with representatives of the Foundation “Archaeological Park: Bosnian Pyramid of the Sun”, a team from Italy, took samples from the blocks at the foot of the north side of the Bosnian Pyramid of the Sun and tested them in the prestigious Turin institution.

Two kinds of samples were taken: coating layer and stone conglomerate blocks. Samples of the same material were previously analyzed by the Institute for Materials ‘Kemal Kapetanovic from Zenica (in 2007 and 2008) by Dr. Muhamed Pasic and by the Construction Institute of Tuzla (2006) by Dr. Ahmet Imamovic. They then concluded that it was a concrete material. Concrete characteristics were also confirmed at the Institute for Structures and Materials at the University of Sarajevo in 2008 (Dr. Azra Kurtovic), and all reports were published in the Proceedings from the First International Scientific Conference on the Bosnian Valley of Pyramids.

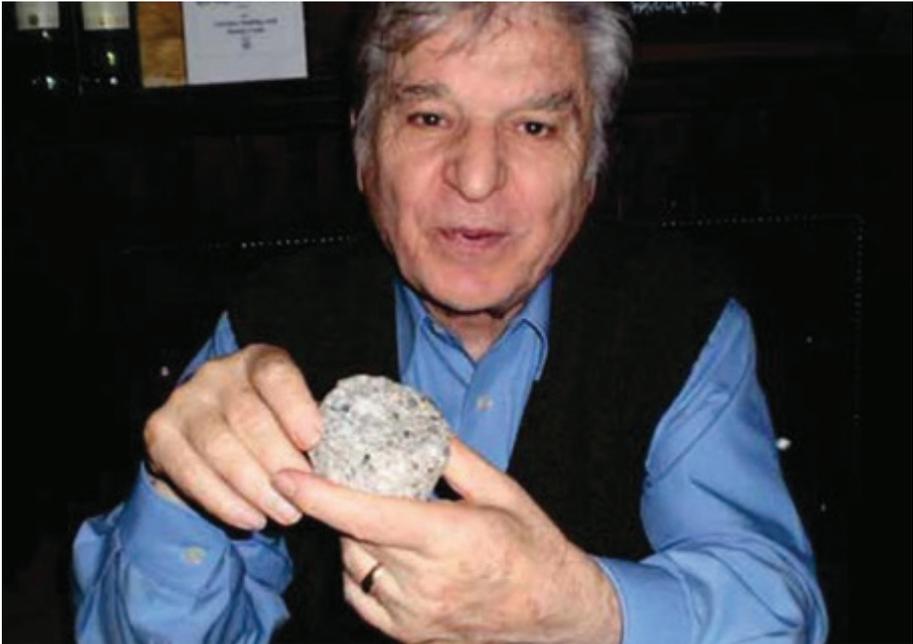

New analyses were performed at the Department of Chemistry of Polytechnic Institute of Turin, which specializes in materials, science, and chemical engineering. At the conclusion of chemical and diffractometry analysis, it was emphasized that the samples of sandstone blocks and concrete conglomerate are artificial construction material that had been made by human hands.’

Politecnico di Torino, 28,000 students, 300 million Euro budget, the leading scientific and educational institution in the field of chemical engineering in Italy and one of the leading in Europe

Concrete, according to test results, consists of “materials that are connected with the binding material that resembles a binder, which ancient Romans used to produce their construction material that resembles a modern concrete”. According to geologists, the coating layer of “sandstone” over concrete blocks, has the same composition as the concrete itself, except that the integral materials have smaller granulation. In the report it is also written that “binding of the concrete was obtained through clay heating at high temperatures (kaolinite, muscovite) and limestone (dolomite and calcite)” and that it is “this technological processing that transformed it into a binder for concrete materials.”

Commenting on the findings of the Italian institutions, a leading chemical engineer and founder of the Institute for Geopolymer from France, Professor Joseph Davidovits stated: ‘This analysis confirms my conclusions from April 2009 when I studied samples by electronic microscope and proved the artificial character of concrete in Visoko.’

Professor Joseph Davidovits with samples of concrete from the
Bosnian Valley of Pyramids

Thus, if a hill has the regular geometry of a pyramid, with four triangular sides, that are correctly oriented towards the points of the compass and is fully coated with concrete blocks, the only conclusion is to confirm that the Bosnian Pyramid of the Sun has an artificial origin. Behind this conclusion are now tens of national and international scientific and educational institutions.

Commenting on the conclusion of the existence of concrete on the Bosnian Pyramid of the Sun, the world's leading Egyptologist, triple doctor of archaeological science and president of the First International Scientific Conference on the Bosnian Valley of Pyramids, Dr. Nabil Swelim from Cairo said, "Having established the existence of concrete materials, we now need to determine the origin of the input materials, their transport, where the process of their production took place, by whom and when!"

Archaeological excavations of the Bosnian pyramids attract tens of thousands of tourists, volunteers, and experts to Bosnia-Herzegovina every year.

CHAPTER 6.

ENERGY RADIATION FROM BOSNIAN PYRAMIDS

A team of researchers from Croatia, led by physicists Slobodan Mizdrak from Zagreb, stayed in the Bosnian Pyramid Valley from April 10 to April 11, 2010. Their hosts were representatives of the Foundation “Archaeological Park: Bosnian Pyramid of the Sun,” including the founder of the Foundation, and Project Manager for Bosnian Pyramid Research, myself, Dr. Semir Osmanagich and a leading archaeologist of the Foundation MSc. Mislav Hollos.

During the visits to archaeological sites, non-destructive methods for the measurement of radiation energy were implemented. The following instruments were used: Gaussmetar EMF 823 with an internal probe and EMF 828 with an external 3-D probe. The devices are industrially calibrated and have high sensitivity and accuracy. Two additional tools were used: an oscilloscope and a spectrometer.

On three locations, anomalies were determined. There is a continuous presence of an electromagnetic beam, of the same frequency (28 kHz) and of the same sinusoid form that appears in the center of the plateau at the top of the Bosnian Pyramid of the Sun, the center of the plateau at the top of the Tumulus in Vratnica and at side passages in the prehistoric underground complex “Ravne.”

Upon arrival to the top of the Bosnian Pyramid of the Sun, at the whole western side, the instruments did not register the existence of an electromagnetic beam. It appeared suddenly at the very top of the pyramid and only in a radius off four meters. When you walk away from the center of radiation, the presence of electromagnetic beam rapidly falls, to be completely lost outside a radius. It is similar in the Tumulus at Vratnica. The electromagnetic beam appears at the top of this structure and disappears very quickly when you move away from the center of the Tumulus.

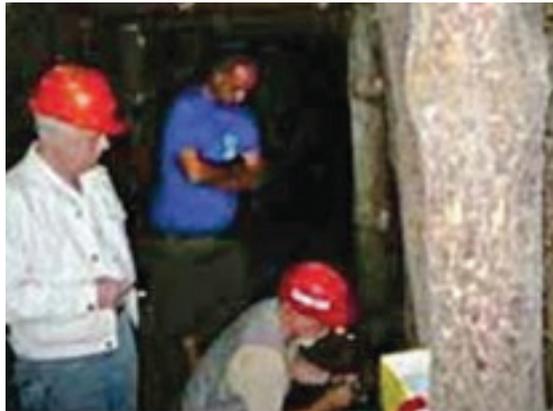

The research of the team from Zagreb reinforces the previous research in Visoko done by the Russian geophysicists Dr. Oleg Khavroshkin and Dr. Vladislav Tsyplakov from Schmidt Institute in Moscow and Britain's researcher Dr. Harry Oldfield.

For now, only one thing is clear: this is not a natural phenomenon. The explanation of this phenomenon will bring us closer to uncovering the secrets of the Bosnian Pyramids. Therefore, this research has a pioneering significance for the Pyramid Science in the 21st century and for the change of the current dogma about the purpose of these structures built on five continents.

Physicist Slobodan Mizdrak from Zagreb during the measurement of electromagnetic radiation in Visoko, April 10-11, 2010. At the top of the Bosnian Pyramid of the Sun an electromagnetic beam, whose origin is not natural, is registered. A team from Croatia and experts from the Foundation at the top of the Tumulus where the continuous electromagnetic beam of 28 kHz intensity of unknown origin is registered.

Russian Academician Dr. Oleg Khavroshkin and Prof. Vladislav Tsyplov during measurements of seismic noise and micro-seismic fields in tunnels beneath the Bosnian Valley of Pyramids. In their report they concluded that within and below the pyramid there are anthropogenic passages.

Dr. Harry Oldfield from the United Kingdom has registered electromagnetic fields over the Bosnian pyramid of the Sun by special PIP camera that shows energy accumulation inside the pyramid and its re-lease from the very peak.

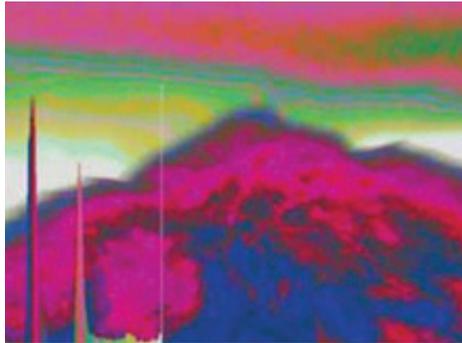

Dr. Harry Oldfield has also patented a computer program and a camera to capture the changing energy patterns emitted by all things, crystals, and even ancient megalithic structures. This method is called electronic scanning (ESM) and it follows the sound, radio and light frequencies that come from the subjects. His equipment can measure changes in energy fields and express them in three-dimensional numerical information.

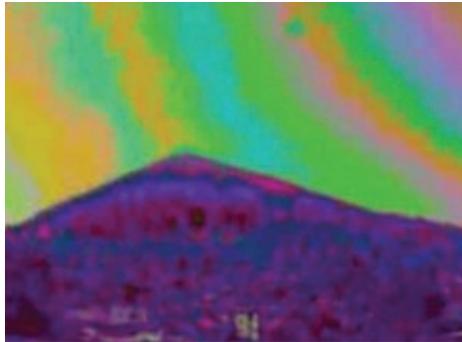

Dr. Oldfield recorded the Bosnian pyramids with several cameras. The results were very surprising and unexpected for him. He registered a number of anomalies that could not possibly be explained by natural activity. When he records natural hills with his equipment, no generation or increase of energy charges in their interiors is registered. Above these hills, energy fields are horizontal, homogeneous, and fixed.

However, when he recorded the Bosnian Pyramid of the Sun, it was a different story. From the KTK Visoko parking lot, a distance of one kilometer from the pyramids, Dr. Oldfield first recorded the north side of the Bosnian Pyramid of the Sun. The result is as follows: within the pyramid, below and above the pine trees planted on the middle of the north side of the pyramid, there is energy, which is not a feature of natural hills. In the past few decades, it is proved that stone pyramids can create a certain type of energy. Furthermore, the video footage clearly shows that the newly created energy accumulates, increases, and then discharges through the top of the Bosnian Pyramid of the Sun.

The following proof that it is not a natural, but a huge artificial construction is located directly above the pyramid. The energy fields are placed vertically instead of horizontally as in the case of natural hills. Unlike natural phenomena, where the fields are fixed, here, these electromagnetic fields pulsate, and they are not homogeneous. In other words, the Bosnian Pyramid of the Sun acts as a tremendous energy generator that continuously discharges its energy above itself. It is a kind of perpetual mobile energy that got an initial momentum in the distant past, and it has worked without pause since then.

A natural hill filmed by the PIP camera shows horizontal electromagnetic

Bosnian Pyramid of the Sun filmed by Harry Oldfield's PIP camera shows vertical pulsating electromagnetic fields above the pyramid.

On top of the Pyramid of the Sun again, we performed another recording of electromagnetic radiation in June of 2010. These methods were non-destructive and present a continuation of recording from April of 2010. Equipment used included a spectrometer and a computer. During the recording, apparatus is reset for the verification and validation of the results.

The results of electromagnetic radiation did match both times. Again, the presence of electromagnetic radiation was registered in the range of

ultra- sound (more than 20 kHz). The difference is that this continuous beam of energy is not moving at the speed of sound, but the speed of light.

Energy radiation at the top of the pyramid has a radius of 4.5 meters. The location is slightly shifted in relation to, topographically speaking, the exact center of the pyramid plateau.

The most intriguing result was obtained by recording the intensity of electromagnetic radiation at different altitudes. Specifically, the recording was done at an altitude difference of 3M meters. At the higher level, there was the result of 40 my, and three meters lower than that, 30 my. In other words, the power increases with altitude!

There are two possible explanations for this kind of energy discharge.

First, the source of electromagnetic radiation is above the Pyramid of the Sun. If you are applying the formula by which the power decreases with the square of the distance, then 90 meters inside the center of the pyramid, radiation ceased. Such a scenario is not coinciding with the laws of physics and opened the possibility of artificial sources of energy just above the pyramid with all the sensational consequences.

Another option is to make this a practical proof of the existence of non-hertzian phenomena about which Nikola Tesla once spoke over 100 years ago. No matter what the nature of electromagnetic radiation is, it seems that first pioneering steps in discovering the purpose of pyramids have been taken. Also, the degree of deviation from the exact center of radiation could be the basis for determining the time of construction of the pyramids.

CHAPTER 7.

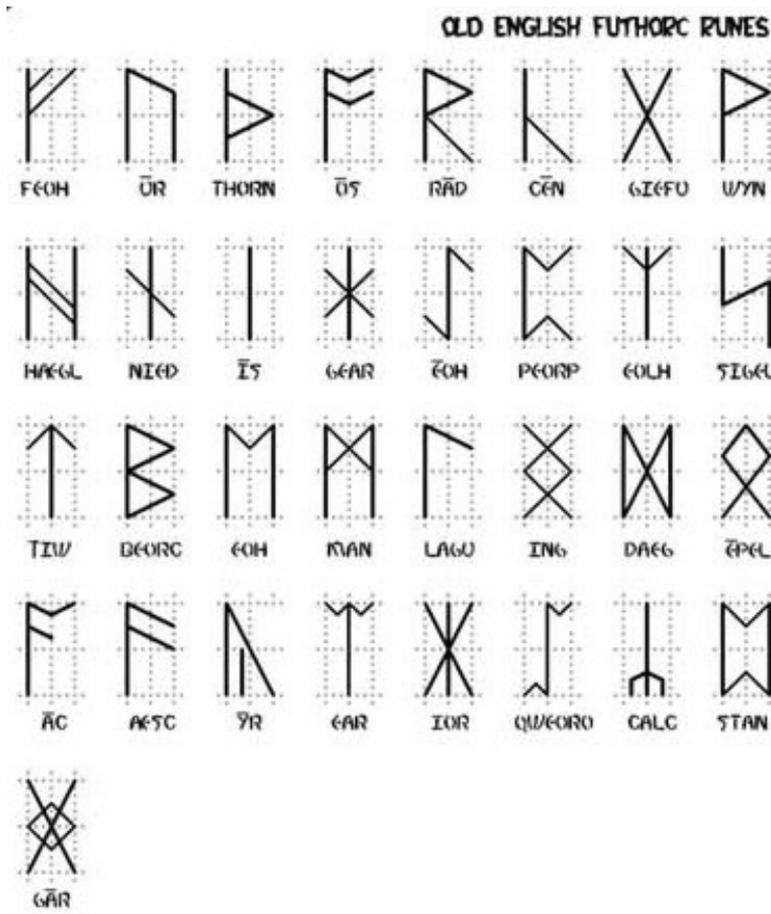

RUNIC WRITINGS

A large number of Hungarian visitors to the Bosnian Valley of Pyramids confirm that there is a great similarity between symbols found on the megalith blocks in the prehistoric underground complex ‘Ravne’ and ancient Hungarian runes. Brazilian researcher Paulo Stekel found that about 55 percent of the symbols in ‘Ravne’ were similar to symbols on ancient Glouzel tablets from southern France.

Old English runic letters known as “Futhorc Runes”, which came to Great Britain from the European continent nearly 2,000 years ago, can be of great help in deciphering the symbols on one of the stone blocks. When comparison of Futhorc runes and symbols shown on the stone block, the similarity is evident with the following runic symbols:

Runic letters in the underground maze?

Old English runes

American retired Professor Bobbie Scarfe used Ralph H. Blum's book on Rune stones called "The Book of Runes: A Handbook for the use of an Ancient Oracle" and she was very excited and amazed at the translation. This is from the symbols: "Thorn": work, "cen": and. She could not find 'leen' in Blum's book. Anyway, this is the result that she deciphered from Blum's book: "The Gateway is closed, we are at a standstill. We will have to act as warriors to defend and conquer until we can move again through the Stargate."

CHAPTER 8.

RADAR TOMOGRAPHY

Experts of radar tomography from Zagreb visited Visoko in 2010 to do research. They were employees of the company “Dr. Beton doo” which deals with research and design in the construction industry. Special emphasis was placed on their geomechanical knowledge, hydrodynamic analysis, and knowledge of concrete materials. The expert team approached recording the site with the equipment for radar tomography or GPR (Ground Penetrating Radar) that can penetrate the soil. The equipment operates on the principle of electromagnetic waves. The Central Processing Unit is a product of an American manufacturer “GSSI” and probes are produced by the Swedish production company “Geoscanners.” The devices are calibrated. Three probes were used during the research: GCB 200 (range 200 MHz), 900 MHz and 2.6 GHz. Devices “recognize” other material or anomalies on the basis of different dielectric.

During the research work in the pre-historic labyrinth, special attention was devoted to recording the ground below the cleaned passageways and detailed recordings of megalith K-2. Around 300 meters of tunnels were recorded by geo-radar equipment. The depth of recording where the phenomena can be recognized was seven meters. Based on incoming data and preliminary observations, it is possible to conclude that three meters below the tunnels there is a continuous layer of homogeneous clay. Below that, material partially changes (it is probably porous material). The potential bottom part of the tunnel is not detected.

In one location, not very deep (between 1.5-2 meters), there is a presence of completely different material, eight meters long, that is not a clay or water. Further research will produce more insight as to what it is.

A few hours of work were devoted to multi-ton ceramic megalith K-2. It was recorded by usage of all three probes, to get more detailed information. Preliminary conclusions: 1) The passage below the

megalith was not discovered; 2) Megalith is formed in two levels (layers); 3) Within the megalith, at the depth of 20-30 centimeters, there is an anomaly (different material). Additional research and recording will be necessary for the establishment of very precise location of this anomaly (object?).

Georadar recording of ceramic sculpture Megalith showed the presence of an oval object within the megalith

CHAPTER 9.

DISCOVERY OF THE UNDERGROUND CHAMBERS AND BLUE LAKE

Intensive work in the underground labyrinth ‘Ravne’ during 2010 has enabled us to figure out new elements of this mysterious prehistorical complex.

From the entrance to the tunnel to the Bosnian Pyramid of the Sun, there is a distance of 2.4 km if we go straight to the northwestern corner. During the period 2005 to 2010 more than 340 m of the tunnels and chambers were cleaned and secured by the wooden supports. Multi-ton ceramic blocks/sculptures were discovered. In the middle of the 8-ton ceramic sculpture K-2, geo-radar instruments located an object which proved that the whole structure had a protective function.

As the expert teams moved forward deeper and deeper in the tunnels, more intersections were discovered. The labyrinth was becoming more elaborate with more side tunnels. The first 250 meters of main tunnel was followed by 45 left side-tunnels and 40 right side-tunnels.

In the spring of 2010, the first underground gallery was found. It has a surface of 50 sq. m and height of 4 meters. It can be concluded that the tunnels are getting higher as we get closer to the Bosnian Pyramid of the Sun. There are eight side tunnels that lead to the gallery which lead us to the conclusion that this was an important meeting place in the past.

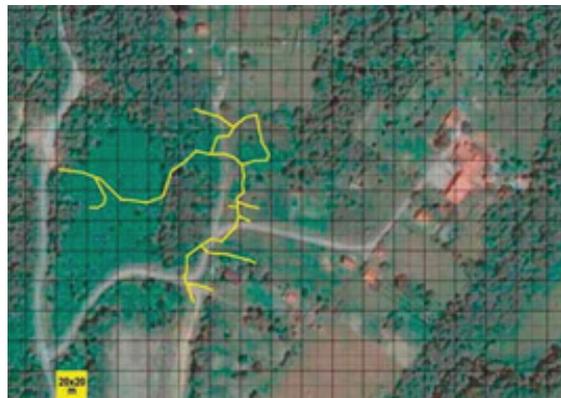

During the summer of 2010 the Foundation hosted International Summer Camp for Volunteers. Over 500 volunteers from 32 countries and 5 continents came to Visoko, Bosnia. Forty-five archaeologists from Malaysia, Italy, Croatia, Spain, and Hungary were working on several different locations.

During the 2010 archaeological season, a small blue lake was discovered in one of the side tunnels in the underground labyrinth 'Ravne'. The lake is on the way from the entrance to the tunnel network to the Bosnian Pyramid of the Sun, approx. 250 meters from the entrance. Water in the lake is clear, clean and it's been around for a long time. There are two tunnels leading to the lake and both were sealed off for the longest time.

The map shows cleaned and secured tunnels so far. Northwestern corner of the Bosnian Pyramid of the Sun can be seen in the distance.

The map shows the directions of the tunnels under the roads and villages shown on the surface in Visoko.

Recently discovered dry wall.

It is located 200 meters from the entrance.

First 'T' intersection discovered 210 meters from the entrance

Volunteers and team of experts during the cleaning process

Tunnel section that leads to the first discovered gallery.

This section is not secured by wooden supports because of its structural stability.

The entrance to the underground gallery before the cleaning and securing.

It measures 50 sq. meters across and 4 meters high.

Scientific analysis of the 8-ton megalith K-2 shows that this is a man-made. ceramic sculpture with the cover poured in situ.

Geo-radar screening located an object inside the megalith K-2 exactly in the middle. It seems that the builders first made a base, then placed an object inside and finally closed it with the cover.

Blue lake in the underground labyrinth was discovered in summer 2010.

Artistic view of an uncovered Bosnian pyramid of the Sun

CHAPTER 10.

FREE, UNSEALED TUNNELS: BREAKTHROUGH, FINALLY

(December 2010) It's been almost five years since I first entered the underground tunnels at "Ravne". At that time, it was called a "cave". There was a small 1/2-meter entrance and one shallow tunnel which ended after 130 meters.

That was a time when I announced to the World, the discovery of the first European pyramids in Visoko: Bosnian Pyramid of the Sun and Bosnian Pyramid of the Moon. This was a one-man project in 2005 with me paying for all costs and analysis. Based on my experiences with the pyramids in China (Shaanxi province), Mexico (Teotihuacan) and Egypt (Saqqara and Giza), I knew that we would discover a labyrinth under the Bosnian pyramids. That's exactly what I wrote in my book about the pyramid's discovery in October 2005. My hypothesis was faced with a lot of skepticism and unpleasant labels by university professors from Sarajevo and elsewhere.

So, when I entered the "cave" for the first time, it was obvious to me that it was a man-made construction. I decided to start archaeological work inside. We've been cleaning the existing tunnels ever since. Instead of one small tunnel, we realized that a whole underground network of tunnels and chambers is hidden 5-25 meters underground.

Two mysteries have followed us from the beginning: who built this huge network and who and why sealed off all side tunnels? Namely, all tunnels were filled up with riverbed material (rocks, pebbles, sand, clay) and then sealed up with the drywalls.

Some of the experts who came to Visoko, such as geologists Robert Schoch from Boston and El Anbaawy from Cairo, claimed that this network was water-made. Bosnian geologists from Tuzla who never came to visit the tunnels talked about a coal mining facility. Bosnian

archaeologist Enver Imamovic thought it was a Roman gold mine. Museum curator Zilka Kujundzic mentioned the possibility of Yugoslav Army hide outs. People from Visoko thought that this was a Middle Age escape tunnel for Bosnian kings and Queen Katarina.

Well, they were all wrong. As I hypothesized, this was a pre-historical underground labyrinth that connects all the pyramids and other places of interest. Radiocarbon analysis that we performed in Sweden (University of Upsala), Germany (Kiel University) and Poland (Gliwice Institute) have shown the age older than any other known advanced culture on Bosnian soil (3,091-5,080 years).

But the real challenge for our team was the fact that we needed to choose the correct tunnel that will lead us to the Bosnian Pyramid of the Sun. We managed to do that using a compass and topographical maps. At the same time, we had to remove hundreds of tons of fill-up material and make this place safe for researchers and visitors.

We've spent tens of thousands of working hours cleaning and securing the tunnels in a period from December 2006 — December 2010. A distance of 400 meters has been secured by wooden supports. Since we had another 90% or 2.5 kilometers to the pyramid, I was ready to patiently work another 30 years until I get to the largest pyramid on the Planet.

Summer of 2010 was very successful. We had 500 volunteers from 30 countries who worked with us. Some of them helped us discover three underground chambers (50m², 30m² and 20m²) and the first underground lake. It gave new elements to this underground structure. The month of November we spent cleaning the third underground chamber. From this chamber we could see six sealed side tunnels leading to different directions. I decided to move forward going South, which is a way to Bosnian Pyramid of the Sun.

And then, on November 30th, moment of excitement and surprise.

After we removed two drywalls in front of us and several tons of fill up material, we discovered the hole in the wall. We widened the hole. It was dark.

We entered inside.

On the other side, there was another drywall and several tons of filler material.

But, further to the left and to the right, we noticed clean tunnels going in two directions, South and North. No fill-up material. The height at the intersection was 2.5 meters. We moved forward, first North. The ceiling came lower, to 1.3 meters. In front of us there was a half-circled tunnel with no visible end. The tunnel was filled with 20-30 cm of water. The width of the tunnel was same everywhere.

We moved through the water. It was an exceptional feeling. Human feet have not entered this tunnel for thousands of years!

On both sides of the walls, we noticed drywalls and more sealed side tunnels but the one we were walking on, was completely free and clean. In one area, on the side walls, we could notice a layer of clay. Somebody had used tools to remove clay to get the same width of the tunnel.

We came back and started walking in the tunnel that leads to the South which is a direction of the Bosnian Pyramid of the Sun. It was even more exciting. We discovered untouched, the longest drywalls so far. They were made perfectly. The bottom end completely matched the top raw. What a craftsmanship! It would be extremely hard to make something similar today without mortar. The height in this section rose to 2 meters.

We walked 50 meters in Northern direction and over 150 meters in Southern direction. There were no obstacles in front of us. Everything was open!

Is it possible that we discovered the main tunnel?

CHAPTER 11.

MEASUREMENTS OF THE ENERGY RADIATION

During the cleaning process of the underground labyrinth ‘Ravne’ in 2010, one of the megalithic blocks was moved about one meter from its original position due to the safety concerns. Namely, the wheelbarrows pushed by volunteers could damage this important block, which was inscribed with carved symbols similar to runic writing.

An interesting phenomenon could be observed afterwards. Water started coming to the surface of the otherwise dry natural bedding.

Because by 2011, the cleaning process has been moved to the other sections of the underground labyrinth, the Foundation’s team decided to bring the megalith back to its original position. It has been done very carefully, without any equipment, but with hands only. There was no damage to the megalith during the process.

It has been established by the electronic instruments that all megalithic blocks are located above underground water flows. For example, megalith K-2 is positioned above an underground water crossing. Somehow, negatively charged energy from the underground rivers, is transformed to positive energy by the megaliths. This phenomenon is to be studied extensively in the future.

In any case, it can be concluded that the builders of the underground construction in Visoko had an excellent knowledge of planetary energies. Therefore, every megalith in the tunnel complex has an important function and should not be moved from their original positions to avoid affecting the whole complex.

During the 2011 New Year's holiday in the Archaeological Park: Bosnian Pyramid of the Sun Foundation there was no rest. As principal investigator of the Bosnian Valley of the Pyramids project I hosted the Čatić agency's director Gaibija Čatić from Sarajevo. He has used electronic devices to carryout preliminary measurements of various types of energy radiation in the underground labyrinth "Ravne".

The following apparatus were used:

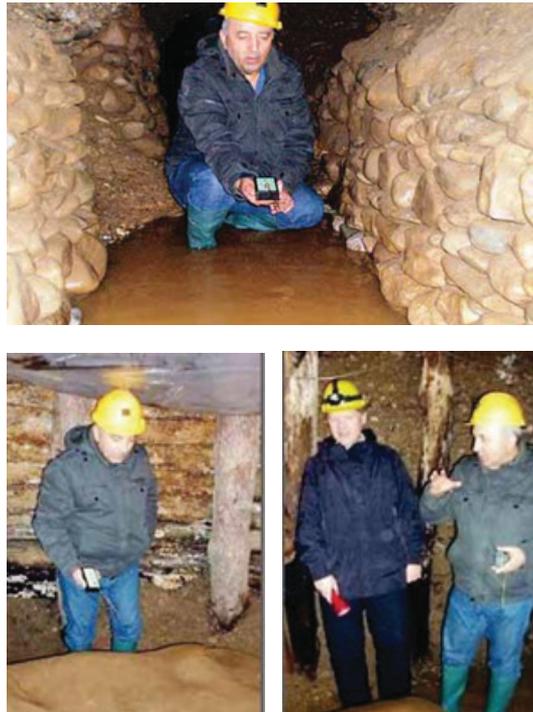

1. ‘Genius’’: A professional electronic measuring instrument which measures underground water flows, cosmic and terrestrial radiation. It measures the plan and combinations of intersections, width, and strength as well as the distance between wave radiations. Also, distribution of the width and strength of waves and radiation types of known grids that cover the globe, namely: Hartman, Curry, and Schneider grids.
2. ‘Suzy’: Used to measure the presence and distance of any technically harmful radiation from its source.

This would be non-ionized radiation arising from the now supersaturated electricity grids, transmission lines, transformer stations, television, radio and computer equipment or any other technical source.

According to preliminary measurements, results are as follows:

- Under each of the ceramic/ megalithic blocks there is an underground water flow.
- The energy that is detected in the vicinity of the ceramic / megalithic blocks is not negative but positive as is the case in 99.99% of the cases above the underground water flows.
- In newly discovered underground tunnels, which are still filled with water, there are no underground water flows, and the water surface is calm, with no current (this detector only registers the movement of water, because then the energy moves).
- The three sources of energy radiation that adversely affect the human body (cosmic, terrestrial radioactive and ionizing) and three grids that have harmful effects on humans (Hartman, Curry, and Schneider) have zero value in the newly opened tunnel. In other words, an underground maze of “Ravne tunnels” is the safest location possible.

Comprehensive investigations were carried out during the next few months in the underground labyrinth, the pyramids, and the surrounding environment. The results were presented to the public, and a separate scientific report was prepared for the “Second International Scientific Conference about Bosnian pyramids” which was planned for September 2011.

Every new meter of the underground labyrinth ‘Ravne’ in Bosnian Valley of the Pyramids is carefully observed and plotted in the map. Precise topographic measurements were done in December 2010 and a new map was made. Top sections show the direction of the tunnel and location of the Bosnian Pyramid of the Sun.

Map of the Bosnian Valley of the Pyramids

CHAPTER 12.

ICBP 2011 CONFERENCE

Second International Scientific Conference on Bosnian Valley of the Pyramids — ICBP 2011 was held from September 5-11, 2011, in Visoko, Bosnia-Herzegovina.

Twenty-seven experts and researchers from eleven countries (United States, United Kingdom, Italy, Austria, Germany, Finland, Slovenia, Croatia, Macedonia, Serbia, and Bosnia-Herzegovina) unanimously accepted conclusions offered by the Scientific Committee which comprised of:

- Dr. sc. Ljuba Ristovski (Serbia), physicist, professor at University of Belgrade
- Dr. Sara Acconci (Italy), archaeologist
- Dr. Ernest Bauman (Germany), Biologist and physicist
- Dr.sc. Lucia Krasovec-Lukac (Italy), architect, professor at Politecnico di Milano
- Eng. Slobodan Mizdrak (Croatia), physicist, independent researcher
- Prof. Dr. Paolo Debortolis (Italy), anthropologist, professor at University of Trieste
- Eng. Heikki Savolainen (Finland), professional sound engineer
- Eng. Goran Marjanović (Serbia), Megatrend University
- Klaus Dona (Austria), curator

The following conclusions and suggestions have been accepted:

1. Interdisciplinary scientific research of the Bosnian Valley of the Pyramids is globally important project.
2. Number of energy phenomena (electromagnetic fields, ultrasound, infrasound) have been detected and measured on Bosnian Pyramids and Underground Labyrinth. Most probably these phenomena have an artificial source which must be precisely located and explained in the future work.
3. Archaeological and anthropological work in Underground labyrinth "Ravne" have produced proofs of its artificial origin and advanced builders.
4. Radiocarbon dating of organic material discovered in binder on the terrace located on Bosnian Pyramid of the Moon, which produced a result of 10,350 years (+A 50 years) B.C. might require the history of the Planet is to be redefined.
5. Further archaeological work is needed on Bosnian Pyramid of the Sun to confirm potential inner passageways and chambers within.

CHAPTER 13.

FALL OF DICTATOR AMONG EGYPTOLOGISTS: HOW DID “PHARAOH” DR ZAHİ HAWASS TRY TO STOP BOSNIAN PYRAMIDS PROJECT

With the fall of Hosny Mubarak’s regime in Egypt, numerous affairs of corrupted state officials came to light. During the decades of Mubarak’s reign some ministers have managed to add billions of dollars to their accounts. Undoubtedly, among the wealthiest is Dr. Zahi Hawass, who ruled for decades on the Supreme Council of Antiquities.

Though legally he had to retire three years ago, he succeeded, thanks to friendship with the wife of Hosny Mubarak Suzanne, to preserve his stay at the most powerful position in the domain of archaeology. Finally, last year he succeeded in getting assignment as the state minister for antiquities and a lifelong position. At least, that’s what he hoped for.

With the revolution in Egypt, it wasn’t possible to hide 1,600 documents that demonstrate that Dr. Zahi Hawass stole precious artifacts, falsified historical findings (making them appear younger than they really are, because they didn’t fit into official history), and fired archeologists, Egyptologists, guides and state officials, who spoke loudly about corruption of his office. (<http://piramidasunca.ba/eng/latest-news/item/3152-translation-from-arabic-of-the-youtube-interview-with-an-egyptian-manag-er-of-antiquity-locations-no.html>)

Dr. Zahi Hawass

Dr. Hawass is a recognized face from leading world scientific media programs: National Geographic, History Channel, Discovery, BBC, and others. He sits on their Boards and serves as their scientific advisor. For many decades, Zahi Hawass has been the only one who announces all discoveries in Egypt, as if the real authors weren't the teams of researchers from Poland, Hungary, Germany, Great Britain, Italy, USA, Japan, or Egypt. For decades, no documentaries about Egyptian pyramids or temples have been recorded without the permission of Hawass, his presence in the movies or financial benefits that are given to him.

To retain his position as incontrovertible ruler in the domain of Egyptology, Pyramid Science, and archeology, he even tried to patent the name "pyramid" as unique Egyptian product.

He labeled all of those who had different ideas concerning the age, constructors, and purpose of the pyramids (Hancock, Davidovits, Bouval, Dunn and many other experts). He would insult them, calling them names and didn't allow them to freely explore and to analyze samples. If by any chance researchers with modern instruments (Japanese, Germans, and Americans) showed that pyramids have unique electromagnetic properties and energetic anomalies, which would reject the idea of most superior pyramids being tombs, it was the end for those researchers and the end of any free and unobstructed scientific investigation in Egypt.

And when he thought he had everything under control, a series of pyramid discoveries appeared across the world: 250 pyramids in China,

hundreds of pyramids in Peru, hundreds of new Mayan pyramids in Central America, tens of pyramids in the Canary and Mauritius. The flawed theory that pyramids were only created in Egypt was discredited. Pyramids were a worldwide concept.

The greatest shock came from the small Balkan country of Bosnia: discovery of the first European pyramids, the biggest in the world and at the same time the oldest in the world!

The carefully nurtured idea of ancient Egypt being the most important cradle of civilization and the only home of the pyramids disappears forever. Let us look at the things he had done to suppress scientific progress and recognition of Bosnian pyramids.

YEAR 2005

In October 2005 I announced to the world that I've discovered pyramids in Visoko, Bosnia-Herzegovina. In an interview with the BBC, I spoke about the possibility that they were older than all known pyramids. That was later confirmed by the State Institute for Pedology. Right after me, Dr. Zahi Hawass was interviewed on the program and spoke with a wobbly voice that it "is possible to discover new pyramids, but he doubted they were older than Egyptian ones".

YEAR 2006

In April of 2006 archeological excavations at the Bosnian pyramid of the Sun began, after our non-profit Foundation "Archaeological Park: Bosnian Pyramid of the Sun" received all necessary permits, hired experts, acquired equipment and tools, and carried out prior satellite, thermal, radar and topographic recordings. A group of Bosnian historians, archeologists and geologists were against research and wrote a petition to stop the project. The Federal Government rejected the petition after prime minister Mr. Hadzipasic and the member of his Cabinet visited archeological locations and were convinced in their artificial character.

Afterwards, upset Bosnian archaeologists and historians asked for the help from the European Archaeological Association in London requested their assistance in stopping research in Visoko. The president of the Association Dr. Anthony Harding and Secretary Predrag Novakovic launched a new petition, full of untruths, in which they tried to stop the project.

Dr. Enver Imamovic one of the loudest opponents of the project

Dr Anthony Harding

At the same time, they asked that every national archaeological organization in Europe boycott the project and openly threatened that all archeologists engaged in Visoko research will no longer work in their vocation/profession once they return to their countries.

Under pressure of European boycott, the Foundation turned to the Government of Egypt asking that it send three experts. Upon recommendation of Dr Zahi Hawass, experienced geologist Dr Ali Barakat arrived in Visoko, in May of 2006. After 42 days of research, at the press conference in Sarajevo, on June 23rd he stated in his written report that the Bosnian pyramid of the Sun was a “man-made pyramid”. (<http://piramidasunca.ba/bs/latest-news/item/3370-unearting-europe's-oldest-pyramid-complex.html>)

The same day, the custodian of the National Museum in Sarajevo and an opponent of the project who never came to see the pyramids herself, Zilka Vejzagic-Kujundzic, wrote a letter to Dr. Zahi Hawass asking him to react and to confute Dr. Barakat.

Two days later, Dr. Zahi Hawass convened an urgent meeting in Cairo: between the Egyptians Ministries of Tourism and Culture and his Supreme Council of Antiquities. They had just

Dr. Ali Barakat investigating concrete blocks of the Bosnian pyramid of the Sun.

one agenda: The influence of the Bosnian pyramids' discovery on tourism in Egypt". Considering that tourism and pyramids is the main Egyptian industry earning \$ 15.5 billion dollars per year, fear that they could lose, let's say 20% (or more than 3 billion dollars) because of discovery of the Bosnian pyramids, motivated them to try to discredit the Bosnian discovery.

Zilka Kujundzic-Vejzagic

After the meeting on June 25th, at noon time, Zahi Hawass held a press conference during which he says: ‘There aren’t pyramids in Bosnia, just a pile of stones. Blocks weighing 30 tons are natural. Barakat is no pyramid expert and Osmanagich is hallucinating’. Hawass wrote a letter to Institute of Minerals of Egyptian Government, where Dr. Barakat works, and asked his boss to fire Dr. Barakat.

Part of Sarajevo’s, Zagreb’s, and Belgrade’s cultural establishment, who opposed the Bosnian pyramid project, were celebrating. Several reporters, archeologists, historians, even writers thought this was the end of project. They had misread the situation and were unaware that the project was just getting started.

The Foundation intensively continued with its works in which 90 full-time workers and hundreds of volunteers were involved. The Government of Egypt sent another requested expert, Egyptologist Lamia El Hadidi. She discovered that Bosnian pyramid of the Moon had rectangular structures, vertical walls, and paved terraces. Excitedly, she called Dr. Hawass in front of me and invited him to come to Bosnia. After the phone conversation, she asked me to send him an official invitation to his personal fax number which I did. However, Hawass didn’t come, he ignored my invitation.

Discoveries in the Bosnian Valley of the Pyramids continued. Hawass sent to Visoko his most loyal man and friend: Dr Mohamed Ibrahim Ali an Egyptologist from Ein Shams University in Cairo. During his visit which lasted eight days, Dr Ibrahim Ali couldn’t hide his enthusiasm for what he had seen and claimed it is obvious that human hand built these structures, and it is yet to be determined whether it is a pyramid, a temple or something else. Again, no sign of Hawass because the news he heard did not suit him.

YEAR 2007

During 2007 I was holding a lecture about Bosnian pyramids in Cairo which was organized by the Egyptian Ministry of Culture. At the lecture were the leading figures of Egyptian science and archeology: vice

minister, assistants to the minister, ambassadors, leading archaeologists and Egyptologists, deans, vice-deans, professors. Dr. Zahi Hawass' absence was glaring.

That same year more Egyptian experts come to Visoko: distinguished Egyptologist, PhD in archaeology and finder of four pyramids in the Egyptian deserts Dr Nabil Swelim, vice-dean of Faculty of Archaeology at the Cairo University Mona Fawad Ali, an Egyptologist Dr Soliman Hammed and geologist Dr Ali Barakat. After seeing all locations many times this team sent messages to the Bosnian and international public that the greatest pyramids in the world are discovered here. Silence appeared in the region. Our local opponents such as Govedarica, Imamovic, Vejzagic, Lovrenovic, Novakovic, Vrabac and people like Harding, Schoch and other international opponents, despite trying to continue with their game of labeling the discoverer as a fraud, were not bringing any scientific arguments on the table.

That same year, I visited Cairo again. In the most read Arabic daily "Al Ahram" we arranged for our project to be regularly followed in their pages. However, after my visit to Cairo, the leading journalist of Al Ahram (Alga Sabet) consulted with Zahi Hawass, then changed the arranged plan and hasn't published any of the affirmative articles.

YEAR 2008

The Foundation was preparing The First International Scientific Conference on Bosnian Pyramids in September of 2008. Dr Zahi Hawass was invited among 55 other participants. In the early phase of preparations, he was offered to preside over the Conference. We could witness that he opened all received e-mails but answered none. One month before the Conference, Dr. Hawass published an article in "Al Ahram" where he harshly attacked both the project and me. The Egyptian delegation of 20 members that was preparing to come to Bosnia was given a new role. Leading members of this delegation were given the role to interfere with and undermine the Conference. Several participants who had visited the site in Bosnia before, taking samples

and had scientific papers about the artificial character of blocks, binding materials, purposes of underground tunnels and parallels with Egyptian underground tunnels, had to change their papers and talks and throw out everything affirmative for Bosnian pyramids. It was shameful! During the Conference those who were willing to speak their mind and confirmed existence of pyramids in Bosnia (Dr. Swelim, Dr. Barakat) received open threats during their presentations that “they will be punished once they return to Cairo”. Younger participants from Cairo and Alexandria confessed me the last day of Conference (just before they left) that they knew that Bosnian Pyramids represent an archaeological phenomenon, but they were afraid for their jobs. So much about the scientific dignity and civil courage.

In winter that year, at one reception in Cairo, two longtime acquaintances met, Dr. Swelim and Dr. Hawass. Swelim asked Hawass why he refused to join in the Conference. Hawass angrily asked why he supports project of Bosnian pyramids. Swelim told Hawass that he should not be speaking about Bosnian pyramids phenomenon when he knows nothing about it nor has he visited Bosnia, unlike Swelim. Hawass angrily said: you know who you are talking to? Do you know who I am? I am Zahi Hawass. Swelim calmly answered: “Nice to meet you. I am Nabil Swelim”: Hawass turned and said this was the last conversation in their life.

Dr Nabil Swelim presiding over the International Scientific Conference on the Bosnian Valley of the Pyramids

YEAR 2009

In 2009 I signed an exclusive contract with a Canadian producer for a project including a documentary and series for the History and Discovery Channels. This followed a visit by the director to Visoko, which left her impressed. Everything was ready for the big project. They had signed their preliminary contract with the world most watched scientific TV programs. However, they needed the confirmation of a scientific consultant on these TV productions. Suddenly, everything stopped. Instead of project's affirmation and the affirmation of the country of Bosnia and Herzegovina to the entire world, the project ground to a standstill. It wasn't a surprise because the name of scientific consultant was Zahi Hawass.

YEAR 2010

After I had delivered several lectures in Houston's branch of ARE center, organizers urged their home office in Virginia's Beach to invite me to their annual conference in the autumn of 2011. These urgings were politely rejected, and no invitation was forthcoming. The reason: Dr. Zahi Hawass would be among speakers this year and they didn't want to upset him with my appearance.

YEAR 2011

By summing up relation of Zahi Hawass, as one of world leading figures in archaeology, towards Bosnian pyramids project, I can notice the following:

- Dr. Zahi Hawass wasn't capable to raise above political role which he played and to behave as the real scientist who cares about scientific progress.
- Careerism of most of the people around him overcame scientific dignity and citizen's courage

Precisely because of his enormous desire to impose and sometimes to falsify scientific achievements with strength of his political position, he will be soon forgotten. And this will happen the moment he has no political position.

It's been happening so many times in history, it will happen now, as well.

Despite everything, true values, like discoveries in the Bosnian Valley of the Pyramids, continue to live on.

CHAPTER 14.

HOW MANY TIMES HAS DR. ROBERT SCHOCH BEEN WRONG?

On May 24th, 2006, I received an e-mail titled: “Dr. Robert M. Schoch - Geologist and colleague of mine”. Colett Dowell wrote to me, claiming to be a “doctor of naturopathology”. In the letter she explained that Robert Schoch, a doctorated geophysicist teaching at Boston University, had earned praise writing about the Egyptian sphinx and the underwater Yonaguni monuments at the bottom of the Pacific floor. She further stated that he was known as a person confronting the official science dogma. She suggested that the Foundation invite him to Visoko and that if we covered the travel costs they would sleep in “tents on the ground”.

The Bosnian Pyramid of the Sun Foundation has always been open to both mainstream and non-conventional researchers. There are only two conditions we require from guests: only nondestructive methods are used and that the results of the research and analysis are shared with the Foundation to be made accessible to the public.

Two months later, Dr Schoch and his team arrived in Visoko.

Dr. of Geophysics, Robert Schoch and Dr. of Naturopathology, Colett Dowell spent ten days in Visoko. That was our first archeological season and we had started with archaeological excavations at several locations. I was with them during their first week and after my departure from Visoko, they were guided by geologist Nada Nukic.

During our discussions, Schoch suggested we establish a “geological-archeological park” because of the many cultural layers and the wealth of geology in the valley.

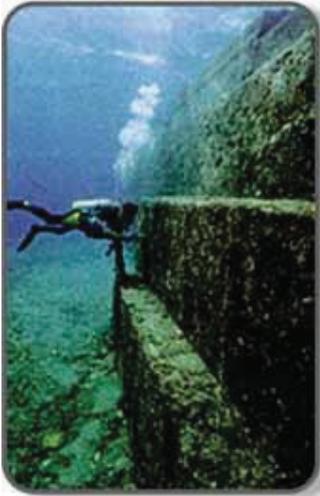

While escorting them on a visit to Sarajevo a great number of people approached me on the street with congratulation for the project and expressed their hopes that the discovery of the Bosnian pyramids would bring about a positive reversal in the country's economy. Colett and Schoch were surprised at the great number of people who recognized me, and they commented that "Schoch is also well known in every American city".

During my three-day absence geologist Nukic was telling Schoch about Dr. Smailbegovic finding arrows at the top of Bosnian pyramid of the Sun and estimated their age at 5,000 years. She also shared with him that at newly found megalith K-1 in the underground tunnel "Ravne" workers carved symbols so that it would appear that we had had found remnants of very old literacy. This "important information" she told Schoch as a secret asking him not to say anything to me, because, allegedly, she would lose her job.

After heading back to the US, Collet and Schoch sent me several e-mails asking me to send them additional money (for expenses and rent while they were absent from their apartments, for medicine, for honorarium, etc.). This wasn't in any way part of our initial agreement, and I did not agree to pay them any additional funds.

From that moment attacks of the project, and me personally, began to show up on their websites. These attacks continued for years and Schoch used every opportunity to emphasize how Osmanagich started the project because of his future engagement in politics" (?) and "desire to make money" (?) and that this project was "a fiasco" and also that there are only 'geological phenomena' in Visoko.

Yonaguni monuments at the

Bottom of the Pacific floor. Graham Hancock

claims this is a very old mega- lithic culture, but Robert Schoch claims this was created naturally.

As it turns out this is not the first time Schoch has taken this kind of stance. Graham Hancock, one of the world's leading non-conventional researchers of ancient civilizations, had a similar experience. Hancock researched for years some underwater ruins at the bottom of the Pacific between Japan, Taiwan and China and published a book *Underworld* on the subject. Schoch joined Graham on a dive to the Yonaguni underwater site, even though he had no experience in underwater diving.

Schoch was assisted by two Japanese divers and during the dive appeared to be more concerned about gasping for air than taking in the site at the bottom of the Pacific floor. He later, very confidently, said that there are no artificial monuments at the bottom of the Pacific and that it was only a natural formation. He was able to make this determination even though, according to those on the dive with him, his only focus seemed to be his personal safety.

I began to realize what this Boston professor was doing—going from one archeological location to another with the intent of taking opposite views of the serious researchers at the sites. He has built a career on this approach. He does not produce any scientific evidence, sample analysis, or radiocarbon dating just his opinions.

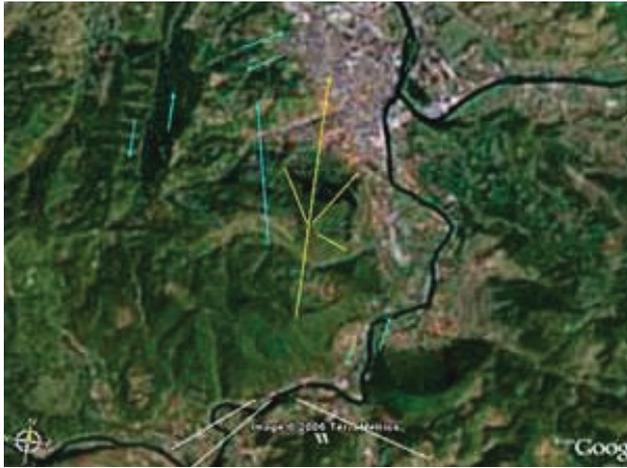

Some examples of this include:

1. In his articles written in 2006 and 2009 (and solely based on that one visit at the beginning of our research in the summer of 2006) Robert Schoch claims there are ‘no pyramids’ in Visoko.

Serious researchers have some scientific base to their claims. Why didn’t he explain how the regular shape of this “pyramidal hill” was made by nature? Which geological process created it? Unlike this Bostonian geophysicist and geologist, the Foundation produces analyses of corresponding scientific institutions. For instance: the Institute for Geodesy of Bosnia and Herzegovina’s analysis of the topographic maps of the Bosnian pyramids confirmed, without a doubt, that a regular geometric pyramid shape exists.

2. Schoch continues to claim that ‘so called pyramids are the result of geological processes’.

Some geologists have claimed that the Bosnian pyramids were created by tectonic movements. That claim should be based upon corresponding maps however the available maps of geological processes for the area clearly show that the orientation of the pyramid’s sides could not be created through the famous tectonic movements. This was a detail apparently overlooked by Dr. Robert Schoch.

Map of tectonic movements in Visoko valley show different directions of movements (blue arrows) in comparison with regular orientation of sides of Bosnian pyramid of the Sun towards cardinal points (yellow arrows).

3. Schoch justifies his claims of nature's involvement into shaping of Bosnian pyramids as "nature creates regular shapes like mineral crystals".

It would be scientifically appropriate to substantiate that claim with examples of other pyramid exaltations in the world, created by nature, which have regular geometry and an orientation towards cardinal points. Since such a natural phenomenon does not exist Schoch used crystals as an example.

4. Schoch claims that he 'studied Egyptian pyramids' and he knows how 'to differentiate what is a true pyramid'.

It would be interesting to hear an opinion of Dr. Schoch about 250 Chinese pyramids in Shaanxi province that are completely covered by soil and vegetation, just like the Bosnian pyramids. Are they also

natural phenomena? How about the thousands of Mayan pyramids in the forests of Mexico, Guatemala, Honduras, Salvador and Belize that are considerably damaged by root effects and natural disasters. It is interesting that the earth deposit coverage of all these pyramids is identical.

The Egyptian pyramids are in a different climatic zone—a desert—and they are completely visible. Of course, Schoch can claim to know they are real.

5. Schoch claims that the Bosnian pyramids are the result of modification processes carried out during excavations”.

This is one of the most interesting claims from Schoch—that the archeological teams of the Foundation ‘redesigned the landscape to make the pyramid shape’. This, of course, could sound possible to someone just reading his website. However, when one comes to Visoko and sees these great pyramids, one understands the absurdity of Schoch’s allegations. This particular claim, by Schoch, was in reference to the terraces at the Bosnian Pyramid of the Moon.

One of the paved terraces at Bosnian pyramid of the Moon. After removing 1m. deposits of earth you came across the artificial terrace built out of processed sandstone blocks. This is one of the locations Schoch claims the Foundation modified a natural hill into pyramid shape

6. Schoch says that variety of non-geologists were impressed with regularity in Visoko, but that “nature is full of regular shapes” and “periodic sedimentation”

Section at the top of the Bosnian pyramid of the Moon. Blocks of sandstone are clearly visible and clay has been used to isolate the blocks to give the structure flexibility in case of an earthquake or other potentially damaging natural event. This clay is also a waterproofing material and a binder for the blocks. Schoch claims that these ‘kinds of phenomena are common in nature:’

7. On his website Robert Schoch claimed that there are some “Egyptian experts’ that claim there are “primitive pyramids in Bosnia’, but he goes on to explain that Dr. Zahi Hawass (until recently the head of Egyptian Antiquities) denied the validity of that claim.

In fact, geologist Dr. Ali Barakat, who has decades of experience in archaeology and in explaining the construction of Egyptian pyramids, came to Visoko several times. After his first visit in 2006, when he researched the Bosnian pyramids for 42 days, Dr. Barakat concluded in a written report that Bosnian pyramid of the Sun is a ‘man-made pyramid’ and that it probably represents a ‘primitive pyramid’. Subsequently, Dr. Zahi Hawass did everything possible to see that Dr. Ali Barakat lost his job because he dared, without Hawass’ approval, to claim there are pyramids in Bosnia. The motivation of Hawass is clear: he didn’t want millions of tourists to come to Bosnia instead of in Egypt.

With all due respect to geologist Schoch, who has not done any analysis in the area, geologist Barakat analyzed retrieved material concluding that these are cast blocks with a binding medium similar to the Egyptian pyramids.

8. Schoch continues that if someone is an expert in the domain of pyramids it is Dr. Zahi Hawass” and that “Hawass claims that on the basis of available data, Bosnia has no artificial entities”.

Robert Schoch became world famous by claiming that the sphinx and pyramids in Giza are more than 12,000 years old. He was attacked by

Egyptologists. Later Schoch withdrew his opinion regarding the Egyptian pyramids and gained Hawass as an ally. This series of events lead to Schoch’s later claim that Hawass is the world expert on pyramids. Hawass claims that pharaohs of the 4th dynasty built the pyramids in Giza with primitive copper tools, and that the oldest and the greatest Egyptian pyramids served as tombs. For such claims evidence is needed.

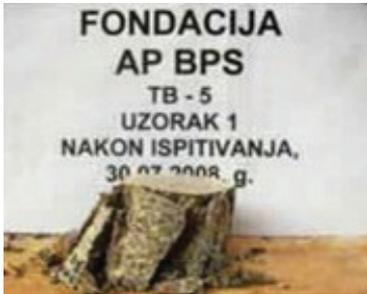

Hawass consistently refused invitations to visit the Bosnian pyramids and attacked all Egyptian experts who came to Visoko and claimed it is an artificial construction above and underground. These experts included: Dr. Nabil Swelim, Dr. Mona Ali, Dr. Mona Haggag, and Dr. Solliman Hammed.

A scientist bases his opinions on scientific facts, and a politician upon interests. Hawass is a politician with a big ego. He could not possibly base his opinion of the Bosnian site on facts because he never visited the site himself and refused to acknowledge other expert’s data and opinions.

9. Schoch says he has seen “the same rocks as Egyptian experts” and that he simply ascribes them to natural geological phenomena’.

The Foundation’s team uses methods of sample testing in independent scientific institutions. Samples from the ‘rocks’, as Dr. Schoch calls them, apropos, rectangular blocks, have been analyzed in six different institutes. The Institute for Construction in Tuzla confirmed this is an artificial tasted material (concrete), just like IKM of Sarajevo University, Institute for Materials of Zenica University, Politecnico di Torino in Italy, and the Institute for Geopolymers in France. So, atone side we have scientific institutions that have analyzed samples, and on the other we have Robert Schoch who, on the basis of cursory perspective of blocks, claims they are natural. Should we believe scientific analysis or in an assumption?

The sample of a concrete block from the Bosnian pyramid of the Sun showed presence of binding material, extreme hardness and low absorption of water.

10. After returning to Boston in August 2006, Schoch and Dowell claimed that the ‘goal of Osmanagich is to politically engage’.

Schoch said this in the summer of 2006, just before the elections in Bosnia-Herzegovina in October 2006. He thought that I used this project as a part of political campaign. The facts tell the opposite to his assumptions. Elections came in October 2006 and didn’t engage politically. Elections came in 2008 and in 2010 and it will come in 2012, and still do not in- tend to engage myself politically. We can all help our countries in various ways, and I do it through pyramid research, protection of cultural heritage, development of archaeological tourism and volunteer work.

11. On many occasions Schoch confidently claimed “he’s doing this for the money, of course” (quotation from documentary movie “Pyramid of Truth”).

In interpretation of others, people simply begin from their own situation. In that way Robert Schoch thought there must be an inner financial motive to my enthusiastic involvement with the project in Visoko. Many people, Schoch included it seems, cannot imagine there are people ready to sacrifice everything for an idea or what they consider a noble cause with no aspirations to benefit financially from that idea or cause. The fact is that since my discovery in 2005 I have utilized all my knowledge, energy, and savings toward this project because it holds the potential for a different, better future for Bosnia and Herzegovina, and for the world. I shall continue as long as I am able.

12. Schoch also claimed on his website that he had “found out from reliable sources that symbols at one of the stone blocks were counterfeit.”

“The reliable source” for Schoch was geologist Nada Nukic that led the Foundation’s geological work in 2006 when he visited. At that time Nukic employed her son at the site and also wanted her husband to become general manager of works. She asked for astronomical fees for her daily reports and in August 2006 the board of the Foundation suspended her from the project. It was at this time that she told Schoch the story about workers of the Foundation who allegedly “carved a couple of symbols at megalith K-1” and that several unknown artifacts were found.

In fact, the Foundation’s team, led by Egyptian geologist Dr. Ali Barakat discovered the megalith K-1 in the underground labyrinth along with the carved symbols.

13. For the underground labyrinth “Rayne” Schoch confirmed that he was “disappointed” because according to some stories he had heard “the Yugoslavian army had storehouses” there and that the “graffiti are recent with tiered ceilings and walls”.

Such comments can stop a research project, so we were lucky that Schoch did not lead the research in the Bosnian Valley of the pyramids. Research, of course, has continued with radiocarbon dating in laboratories in Kiel (Germany), Upsala (Sweden) and Gliwice (Poland). Results confirm this site is a prehistoric engineering complex with multi-ton ceramic blocks and sculptures and tunnels spread out for kilometers. In the summer and fall of 2010 three underground chambers were discovered as well as of free sections of the tunnels-places that a human foot has not walked for thousands of years.

14. Robert Schoch has frequently called the research project at the Bosnian Valley of the Pyramids a “fiasco”.

A fiasco is a finished, failed project. Since Robert Schoch’s visit to Visoko, the Bosnian pyramids have become one of the most active archaeological projects in the world with more than 340.000 working hours spent on archaeological excavations, sample analysis, and radiocarbon dating. In the summer of 2010, 500 volunteers came to Visoko from 30 countries along with 45 archaeologists from Malaysia, the USA, Italy, Spain, Hungary, Croatia, and the United Kingdom.

This year volunteers applied from 42 countries from six continents. Notable American archaeologist Dr. Ezra Zubrow was visiting the Bosnian Valley of the Pyramids in the summer of 2010 and concluded further investigation should explore the questions of ‘who built the Bosnian pyramids, when they were constructed, and what the connection between tunnels and pyramids truly is.

A leading Egyptologist and scientist who catalogued all 138 pyramids in Egypt, Dr. Nabil Swelim confirmed that the ‘pyramids in Bosnia are an amazing and genius construction attempt for which a lot of time is needed to conclude who built these amazing structures and when’.

Leading Russian geophysicists of the Schmits Institute of the Russian Academy of Sciences, Dr. Oleg Khavroshkin and Dr. Vladislav, Tsyplakav, after two years of researching in Visoko, concluded that according to form, shape and characteristics the Bosnian pyramids are artificial pyramid constructions with a network of tunnels underneath them.’

Of course, people like Dr. Robert Schoch can continue to close their eyes before the facts, to feed their ego with un-argued statements and claim to their friends (Jahn Anthony West and others) that there are no pyramids in Bosnia-Herzegovina.

Really, how many Times Dr. Robert Schoch get away with being wrong?

CHAPTER 15.

UNDERGROUND LABYRINTH “RAVNE”: EXPEDITION TO UNKNOWN

Monday, June 26th, 2012

For a year and a half we have not touched the tunnel leading off the Pyramid. And now, June 26th, we decided to systematically investigate this northerly oriented tunnel. We were escorted by a German producer from Berlin, who prepares the trailer for a documentary about Bosnian pyramids.

The team of seven members included me, Italian archaeologist Ricardo, our employees Amir and Admir, and several volunteers from Australia, Great Britain, Hungary, and Serbia. We dressed in protective clothing and waterproof boots with spare sets of batteries and compasses and entered a tunnel that was filled with water to a height of 40 cm. We began to clear the first barrier working in a very narrow tunnel. We progressed slowly in laying position, cleaning sand, pebbles, and mud by hands, without tools other than two buckets.

After more than an hour, we made a passage through which we crawled. We were welcomed by the water, but the passage of the tunnel was open. We went about twenty meters. Tunnel was curving, going from the north to the east.

Then we encountered a new obstacle, a pile of gravel and sand in front of us. We cleared this one relatively quickly and continued on. We entered the tunnel without water. Next came the big intersection, the height of the tunnels nearly three meters. We examined three sides of the tunnel which soon became sealed. We headed to the only free tunnel, which was the direction to the south.

It is no coincidence that the passage was left open just to the south. This is the orientation that we need if we're to reach the pyramid in the future.

After two more intersections, we came upon new barriers. The southern direction of the tunnel was filled to the ceiling. This did not discourage the young Italian archaeologist who began to clean gravel and pebbles with his bare hands. After forty minutes he had created enough space to drag his body between the ceiling and the pile of gravel. Soon we came to join him.

We were finding new intersections, ceramic blocks with carvings, different height ceilings, clean air, and equal temperature in all tunnels. We were in sections where no human foot had stepped for a very long time. Once we consistently followed the direction toward the east-south we encountered a new barrier in the form of gravel and pebbles which sealed the passage to the top of the three meters high ceiling.

We made a break. What now? We looked at the clock. It had been four and a half hours from the start of the expedition. We decided to stop here for security concerns.

We returned the following morning with four teams. We began widening this new direction, the two teams continuing in the middle sections where narrow places occur and one team going all the way to the front, removing pebbles and sand.

Volunteers and Ricardo were delighted when they returned back among other colleagues. They were the stars of the evening and started telling stories of their adventures.

The next day we arrived with the team to map the new tunnels. We found a total of 152 meters of the new tunnel passage and tens of meters of new side tunnels!

When small sections of underground tunnels are discovered at the other places (Mexico, for example) it gains worldwide attention. Here, in one day, we discovered more than 150 meters untouched pre-historical

underground tunnels. In a statement to the documentary producers, I said:

The first 300 meters of tunnel in which we worked during 2005 to 2010 period were completely covered and filled with gravel, and every few meters drywalls were installed in an effort to stop future explorers, It took us six years to painstakingly clean and secure these passages, At the end of 2010 we discovered the first free sections, which was a great encouragement for us, And now, after this experience, we see that the small barriers are followed by longer open sections. Have we reached a point where we will be finding more and more open tunnels in front of us? How much time will it save us on our way to the pyramid?

These new tunnels have been leveled, which means if we stay at the same height in the future, we will reach a depth of 280 meters below the top of the Bosnian Pyramid of the Sun. In 2007, Russian geophysicists Dr. Oleg Khavroshkin and Dr. Vladislav Tsyplakov detected existence of tunnels under the Bosnian Pyramid of the Sun at the depth of 280 meters.

Thus far we've discovered 740 meters of underground tunnels. This labyrinth is tens of kilometers long. We're 20% of the way closer to the Bosnian Pyramid of the Sun. The only question now is when we will connect with the tunnels beneath the largest pyramid of the world.

Years of hard but rewarding work are in front of us. Not decades, anymore.

Preparation for the expedition to unknown.

Task in front of us

Tunnel section filled with the wafer

Blocked tunnel section

It took hours to remove enough material so we can slip in

Moving forward

Now, new sections were not an obstacle for us

Very enthusiastic after hours of slow progress

Several sections with the water were ahead of us

Open section of the new tunnel

Discovery of drywalls in new tunnel sections

Compact drywalls built in ancient history

Break

Satisfaction with the job done

Just in case, not to get lost in hundreds of meters of new tunnels and intersections

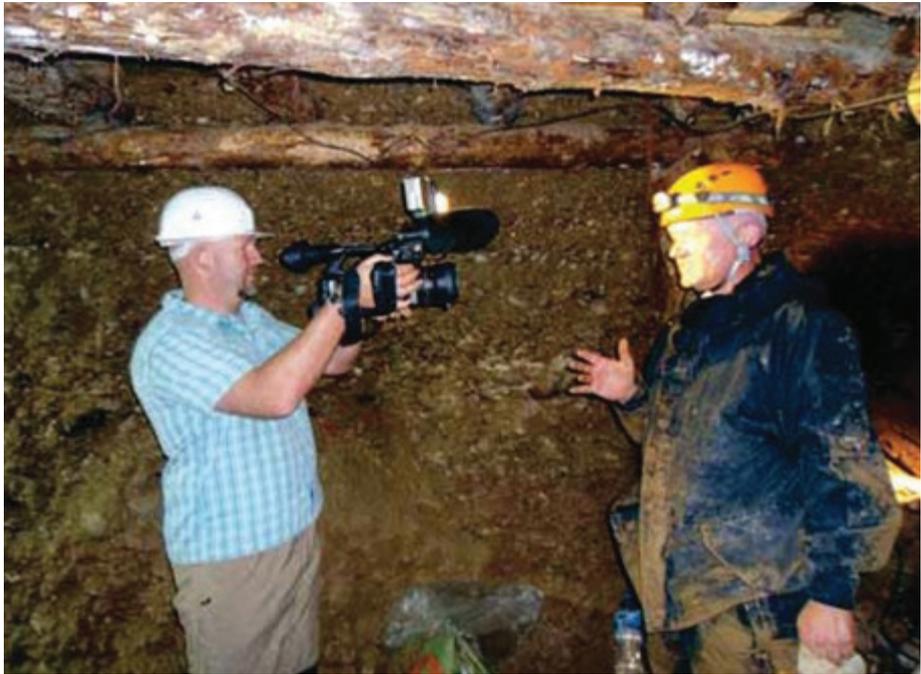

Discovery of new monolith

First notice of carvings

Carvings thousands of years old

Statement after discovery

CHAPTER 16.

HIDDEN HISTORY CONFERENCE 2012

Hidden History” Conference was organized by the “Archaeological Park: Bosnian Pyramid of the Sun” Foundation and it took place on September 8th, 2012. in Visoko. According to those present it was “fantastic”. This international scientific meeting brought together a number of experts and researchers with a common love for exploring and discovering the real history, ancient civilizations, and unexplained phenomena.

Conference was opened by the Academician Sam Osmanagich, Ph.D. He advocated the creation of a new scientific paradigm and the establishment of an interdisciplinary “Pyramid Science” modeled on the re- search of the Bosnian Valley of the Pyramids. A review of the world’s unexplored pyramid with emphasis on the Bosnian Pyramids and new findings and analysis, followed.

Lecture by British author and researcher late Philip Coppens was dedicated to the mysterious megalithic structure and artifacts. Senad Babor from Sarajevo presented his master’s thesis on the subject of the Bosnian pyramids through time using 4D technology. Italian scientist Professor Paolo de Bertolis provided important scientific analysis of ultrasonic phenomena in the Bosnian Valley of the Pyramids, their regularity and unique artificial origin, unlike natural pyramidal hills in Italy where this phenomenon could not be recorded. Physicist Slobodan Mizdrak, Ph.D. of Croatia introduced the results of an experiment using electromagnetic radiations on the top of the Pyramid of the Sun.

Foundation’s archaeologist dr. Ricardo Brett from Italy announced publicly, for the first time, reports on radiocarbon dating of organic material found in the Pyramid of the Sun in June 2012. Austrian researcher Klaus Donna, once again, in his brilliant talk presented the

discoveries of new artifacts that do not fit into the official history and are thus completely ignored by official science.

The conference participants were welcomed by the Prime Minister of Zenica-Doboj Canton Mr. Fikret Plevljak who called on the entire Bosnia-Herzegovina and international press to come to Visoko and visit the Bosnian pyramids.

“Bosnians, wake up. Something is happening in Visoko, the history is solving here!” said Plevljak.

During his speech, he called on opponents of the project to visit archaeological sites in Visoko and, if they believe that “there is nothing there” to provide the scientific evidence for such claims. He added that the Cantonal Government and its 400,000 inhabitants will fully support a research project of the Bosnian pyramids. Foundation and conference was greeted by the Mayor of Visoko Munib Alibegović and friend of the Foundation Ambassador of Pakistan to Bosnia HE Khalid Jaffery.

The conference, in addition to speakers, gathered a large number of guests and tourists from the UK, Austria, USA, Germany, Macedonia, Slovenia and Serbia. Scientific conference was attended by the Summer Camp’s seventh shift which numbered more than 65 volunteers from 20 countries. They were, in the presence of Prime Minister, Mayor of Visoko and Chairman of the Foundation’s Board of Directors Ahmed Bosnic, delivered certificates for participating in the Summer Camp.

Next day, September 9th, visit was organized to the “Archaeological Park: Bosnian stone spheres.’ in Zavidovici.

4D VIZUALIZATION OF THE BOSNIAN VALLEY OF THE PYRAMIDS

An engineer Senad Bahor from Sarajevo, Bosnia-Herzegovina is an author of Master's thesis at the Sarajevo School of Science and Technology. This is the first scientific degree at one of the Bosnian Universities dedicated to the Bosnian Pyramid project. The name of the thesis: "The Four-Dimensional Visualization of the Bosnian Valley of the Pyramids — New Methodology for the Reconstruction of the Cultural Heritage Site".

His challenge was how to do the 4D visualization if:

- the site is completely covered with gravel and soil, with the houses and other objects residing on the top of the cultural heritage object.
- there are no historical materials, photos, maps, sketches, paintings, or written material on the site whatsoever.
- it is hard to place the cultural heritage site while comparing it with any other similar sites around the world in a certain timeframe in history (older than any cultural heritage site)?

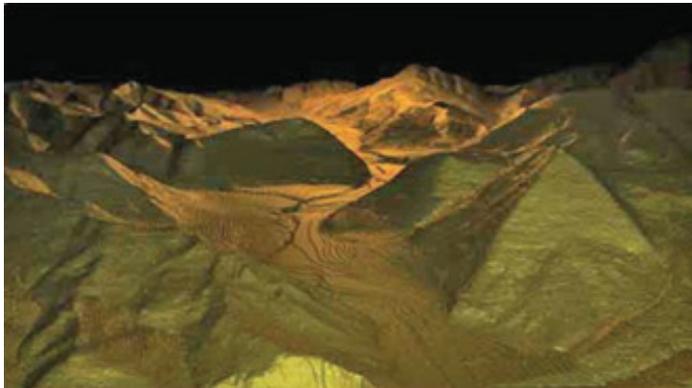

Using HTML5 and WebGL for 4D visualization he has applied new methodology:

- Obtain high resolution aerial photos or satellite images of the area in order to comprehend the area at the fullest.
- Convert the satellite image into a high-resolution z-map image by using the Z-map software and its photogrammetric process in order to get the elevation information from the captured image.
- Import the z-map and the original aerial image in the 3d software

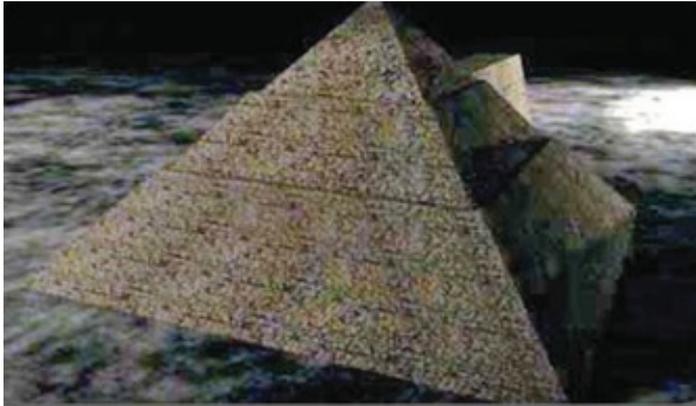

and place them as textures on a polygonal plane. Then, run the tessellation process by using the software displacement algorithms on the polygonal texture map to get the 3d polygonal model of the area.

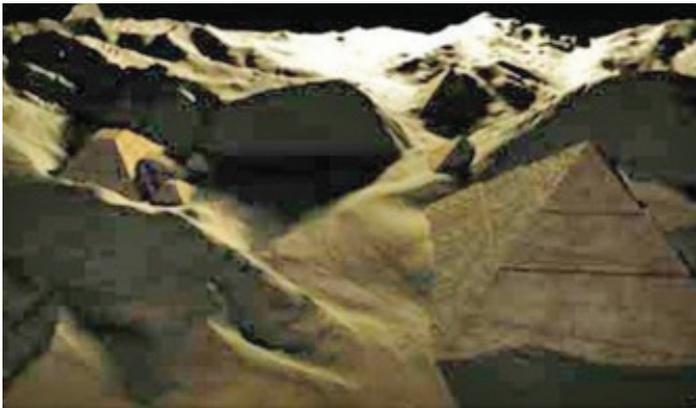

- Observe the model to find patterns that can be matched to the existing real-world objects and compared. The excavation points should be used to capture the textures.
- Visualize the object that is present underneath the Earth surface and place real-world textures at the predetermined pattern
- Place the prototyped model on the polygonal terrain to get the full 3D scene
- The new models he came up with are extremely valuable and they show that the original dimensions of the Bosnian Pyramid of the Sun are larger they previously thought Height of the Pyramid, for example, is much higher than 220 meters and could reach over 360 meters.

ARCHAEO-ACOUSTIC ON BOSNIAN PYRAMIDS

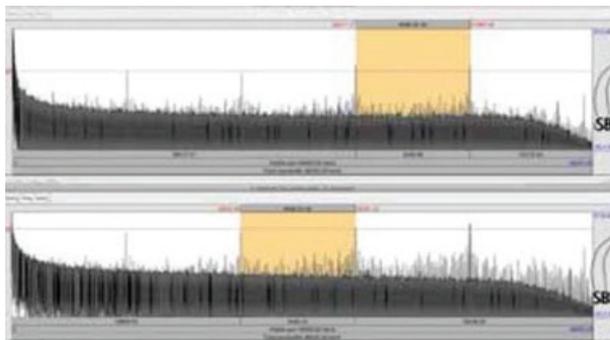

Professor Paolo Debertolis from Trieste University, Italy have been investigating ultrasound phenomenon on the top of the Bosnian Pyramid of the Sun in a period 2010-2102. He has detected and measured ultrasound of 28.400 Hz on the top of the Bosnian Pyramid of the Sun using professional equipment. Ultrasound comes in regular distances, blocks, with 9.3333 Hz distance. It points to artificiality of the source. Bosnian

Pyramid of the Sun emits ultrasound beam, 5-15 meters in radius which can be detected at the very top of the pyramid.

This is another confirmation of the Bosnian Pyramid of the Sun being a huge energy machine.

EXCLUSIVE NEWS: RADIOCARBON DATING OF THE BOSNIAN PYRAMID OF THE SUN

The method commonly used to record dates of artifacts and structures is Radiocarbon dating and was pioneered in 1949 at the University of Chicago by William Libby who has since been awarded the Nobel Prize in Chemistry for his work. Radiocarbon dating accurately records dates to 58,000 years and was used to determine the date of the Bosnian Pyramids.

Italian archaeologists Dr. Ricardo Brett and Niccolo Bisconfi discovered an organic material (a leaf) on the top of the concrete blocks that cover Bosnian Pyramid of the Sun in June 2012. Carbon dating was performed in Lab in Kiev, Ukraine with astonishing result: 24.800 years +/- 200 years. It gives the minimum age of the pyramid structure and makes it the oldest pyramid in the world.

LOCATED ENERGY SOURCE FOR THE BOSNIAN PYRAMID OF THE SUN

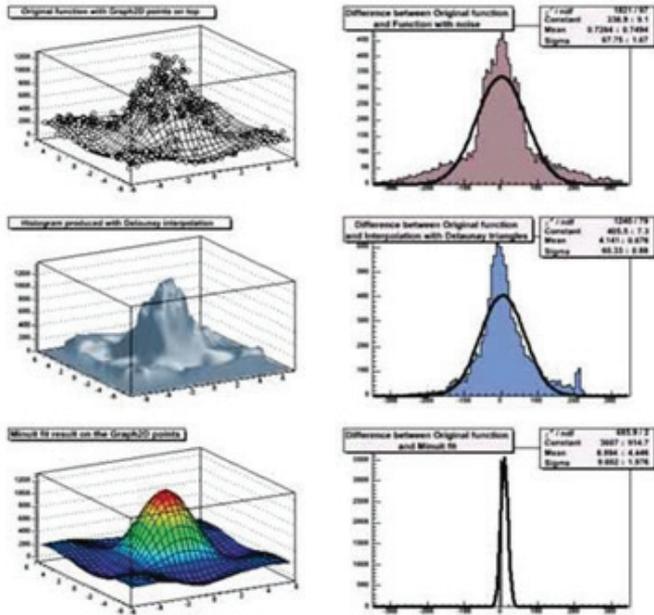

Croatian physicist Slobodan Mizdrak, led the team of physicists, electrical engineers, anthropologists, and other experts in April 2012 while conducting an experiment on the top of the Bosnian Pyramid of the Sun. Two-day recording raw results were submitted to the labs in Zagreb (Croatia), Belgrade (Serbia) and Vienna (Austria). Results were obtained and presented of the annual “Hidden History Conference” held in Visoko, Bosnia-Herzegovina on September 8, 2012.

It has been confirmed that the source of the energy beam, which is emitted through the top of the largest pyramid in the world, is located 2.440 meters below the pyramid with the shift of 440 meters. An iron plate represents the source combined with the negative ions and underground wafer streams and its able to generate the electricity of over 10 kW.

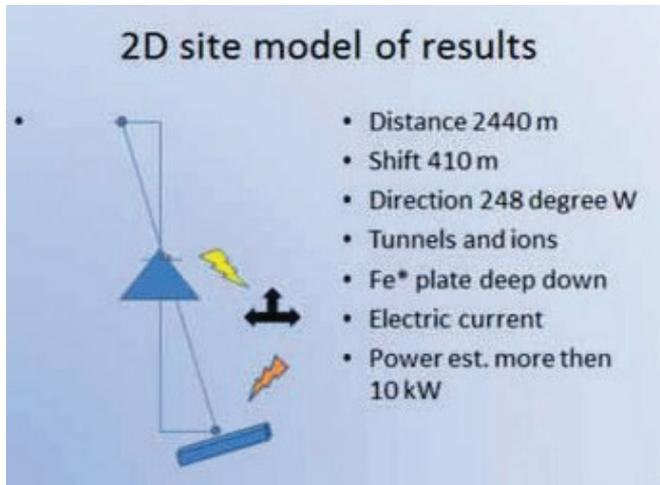

These results are pioneering steps in understanding of the real purpose of the original, oldest, and most superior pyramids.

CHAPTER 17.

ICBP 2013

Fourth International Scientific Conference on the Bosnian pyramids ICBP 2013 - “Hidden History”, was held in Sarajevo September 1-8, 2014.

The Conference gathered 23 experts from 11 countries, from archaeologists from New Zealand, physicists, engineers, biologists from countries such as USA, Canada, Germany, Netherlands, Croatia, Serbia, Slovenia, Bosnia and Herzegovina. Experts have presented their analysis, laboratory examinations and radiocarbon dating.

“This year, the most important news is the determination of the precise age of Bosnian Pyramid of the Sun. After radiocarbon sample dating, which is found beneath concrete blocks of pyramid, it is confirmed the age of 29.000 years plus - minus four hundred years. It is confirmed that this is the oldest pyramid in the world”.

ELECTRICAL ENGINEER GORAN SAMOUKOVIC: SCHUMAN'S RESONANCE MEASURED ON BOSNIAN PYRAMIDS

- Serbian Electrical Engineer Goran Samoukovic from Belgrade came with his team to Visoko on April 12-14, 2013. They performed detailed detection and measurements of electromagnetic phenomena in Bosnian Valley of the Pyramids: Bosnian Pyramids of the Sun and

Moon, Vratnica tumulus and Underground Labyrinth Ravne.

They detected following significant frequencies at those locations:

- Frequency of 28.4 kHz which had been measured in several other occasions by Croatian, Serbian, Finish, and Italian experts. This particular frequency does not have use in our technology.
- Technical frequency of 50 Hz and GHz nearby electrical cables with an extremely bad effects to human health
- Beneficial Schuman resonance of 7.83 Hz ideal for physical, mental and spiritual advancement. It seems that Bosnian pyramid complex has been generating, maintaining, and enriching Schuman resonance for very long time affecting in a positive way its surroundings.

PART TWO:

2014 – 2023

New definition of pyramids

CHAPTER 1.

DISCOVERY OF NEW PREHISTORIC UNDERGROUND TUNNELS - A BREAK-THROUGH

Ten years of scientific and archaeological investigation of the Bosnian pyramids have brought many exciting moments as well as dramatic turns which require a redefining of our knowledge about history.

One such breakthrough occurred in April 2015. During the semi-annual cleaning and passing through new sections of the prehistoric Underground Labyrinth at Ravne, the employees of the Foundation have been faced with various difficulties. During the winter of 2014 and spring of 2015, they only won a few new meters of tunnel. At one point, in February 2015, one branch of the tunnel which leads to the south, toward the Bosnian Pyramid of the Sun, ended under a huge rock.

We decided to go around the rock by using the side passageways. Like many other tunnels which we had already discovered, these were filled with a conglomerate or fill of gravel and sand. Two side passages, to the East and West, ended in the conglomerate after about ten meters. We tried one more direction but that too didn't yield the desired result.

Then we decided to go around the large rock by digging a tunnel around it. The employees undertook this activity very carefully, they were constantly checking the stability of the material, the values of oxygen and carbon dioxide. After thirty meters, the rock was bypassed.

I was in Houston when they told me that they discovered a new tunnel behind the rock. It was a new section, without the fill, but under water. I made a decision that the workers should stop there and wait for my return to Bosnia.

I then formed a team of six members for the first scientific screening of the newly discovered sections.

This wasn't the first time that we had found free sections in which the human foot has not entered for a long period of time. It's a special feeling for every researcher and a moment when dreams come true.

Every time when the investigators found prehistoric underground tunnels in Egypt, Mexico, China, or Peru, they were often a worldwide attraction and leading news shared across all media.

In our case, we are far ahead for the length of the tunnel made by an intelligent hand in the distant past. So far, we have discovered 1,550 meters.

The day for entry into the new section of tunnel finally came. On April 30, 2015, with full protective equipment, rubber boots and waterproof suits or waders, lamps, and compasses, we were ready for the adventure. The team consisted of the following members:

- Dr. Sam Osmanagich, Discoverer and Principal Investigator of the Bosnian Pyramids
- Anela Preljević, B.C.in Archaeology (UCL London) and the Foundation's field archaeologist
- Mejra Kozlo, B.C. in Geology and the Foundation's field geologist
- Engineer Osman Buza, assistant of the Cantonal Minister for Economy
- Jock Doubleday, videographer, and PR Director of the Foundation
- Edo Građan, an employee of the Foundation

We went to the left side, toward the west. The height of the tunnel was 110-120 cm. We started walking in a bent-over position. I led the team. The tunnel was filled with water 20 cm deep. In some places it reached 30 cm. We found three dry sections, without water. We were looking left and right, there weren't any side passages. On the pebble floor we didn't see tools or artifacts. There were no traces of burning on the walls or ceiling. We found some interesting, elongated pieces of stone that our archaeologist Anela took for analysis.

Finally, the tunnel came to an end. The dry section with pebbles had a round pool fifty centimeters in radius and fifty centimeters deep at the end. The water was clear and clean. We gave the first statement to the camera and turned back. Osman and Edo measured the length of this part of the tunnel. It was in total 41 meters long.

We went back to the entrance. We agreed to visit a section in the opposite direction. I told Jock to go first and to record while the water was clear. Behind him were Anela and Meira, then Osman, Edo, and me. We moved toward the east. After a few meters we came to the first intersection. It was leading exactly toward the south. I liked that because this would be the desired direction of the Pyramid of the Sun. The tunnel was open and about three meters in length, then it had been filled with gravel to the ceiling. There was no dry wall. We stopped there and took a photo.

In front of us there was a continuation of the tunnel toward the north- east. The water level was increasing. Osman returned, and we continued. The water became deeper, it reached a depth of one meter, later it became even deeper. After seventeen meters we came to a new intersection. Our route was blocked by stone walls and then filled with material. An open section continues to the left, toward the east. The water is becoming deeper and has found its way into my boots. I heard the same comments from other team members.

We continued even though we were getting wet. The ceiling height is about two meters. We walk slowly through the muddy, clay soil. The water is freezing. We come to a new intersection. The tunnels intersect at 90 degrees. Side passages are blocked by stone walls, and then by gravel material. I comment to Anela:

“Now you have the opportunity to enter into a new section of the tunnel. You can see that is not true that the Foundation makes drywall tunnels or digs them, these are prehistoric tunnels.”

She agreed with me and gave a statement to Jock. Mejra joined her. We continued and after only a few meters we saw one more intersection and again, the side passages were blocked. One part of the dry wall is under water, Anela commented. She recognized the difference in the compactness of the loaded material and the conglomerates of the tunnels.

We continue with the investigation. With every step it becomes harder to walk. After a few meters, we come to the end of the flooded parts of the tunnel. It ends with sandy soil. In our hands the sand separates and goes into the water. Anela sees a piece of wood. Organic material! She takes samples.

After a few minutes we turn back and go toward the exit. This time I measure the length of tunnel. The branch which leads toward the east is 60 meters long. I give the information to Mejra about the frequency of the side passages. The northeast-southwest direction is 17 meters long. The last section, which is oriented toward the west is nine meters long.

Now we sum up the total length of the open, prehistoric section of the tunnel. In total it is 127 meters. This is great information.

After two hours of investigation and adventure, we went back outside.

We changed our clothes and then took a photo of the organic material.

In our minds we made a plan as to what to do next with the tunnels. We want to clean up the tunnel that leads to the south, in the direction of the Bosnian Pyramid of the Sun. We need to bridge the nine meters of water and make a barrier toward the rest of the open tunnel.

One phase of investigation of the tunnels is finished, another has just started.

Our hypothesis is confirmed that this is a labyrinth with countless tunnels, and you can always choose the direction of the next tunnel that is to be cleaned.

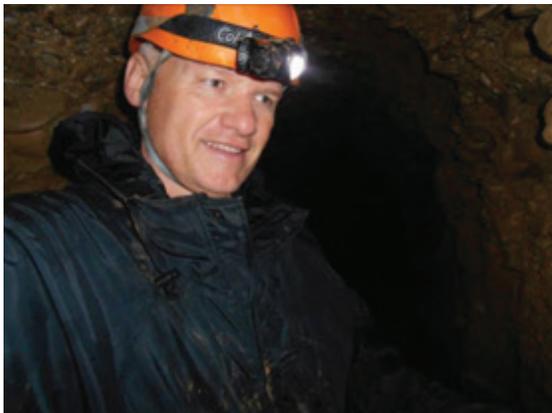

Video recording of expedition:

<https://www.youtube.com/watch?v=7OGmwUgaLE8>

CHAPTER 2.

CONNECTION OF CERAMIC BLOCKS IN THE RAVNE TUNNELS WITH HUMAN ORGANS

Mega-ceramic blocks in Underground Tunnels Ravne in Visoko, Bosnia-Herzegovina, have been already a long-standing attraction. Many people heard of ‘Egg shaped block’, or ‘K-1’, the famous ‘K-2’, huge ‘K-5’ and others.

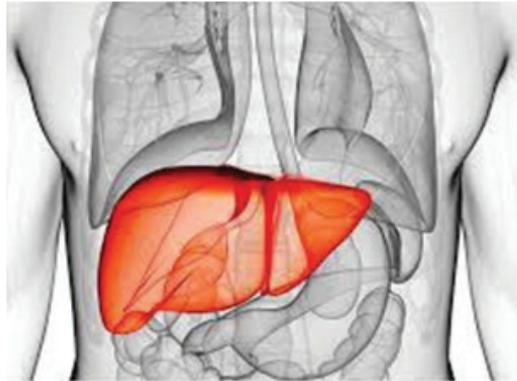

By capturing energy phenomena, it is determined that specific frequencies of electromagnetism and ultrasound, beneficial for human health, are generated around them. Also, it has been established that these blocks are regularly located above underground water flows, neutralising harmful geopathogenic radiation.

Several medical doctors have drawn attention to the fact that the shape of individual ceramic blocks fully corresponds to individual organs in the human body.

Thus, for example, the block K-1, could be reminiscent of the liver shape in humans. The liver is the largest indigenous organ in humans. It has a central role in metabolism. Due to a number of necessary life functions, it is also called a ‘chemical factory’.

Mega-ceramic block K-1, a mass of four tons, resembles a liver.

Location and shape of the liver in the human body

A small egg-shaped block, 60 meters from the tunnel entrance, attracts a lot of attention with its appearance. Anatomically, it resembles the heart in man. The heart is the only motor power that drives blood.

A small block of 350 kg to the left

Human heart

The only block that is not of artificial ceramic origin, which is especially emphasized at the entrance to the prehistoric underground labyrinth of Ravne, is a stone with numerous grooves and lines. It resembles the human brain. As is known, the brain is the most complex human organ. The brain is a biological computer that manages all the most important processes in humans.

The stone at the entrance to the tunnels looks like anatomy of the brain.

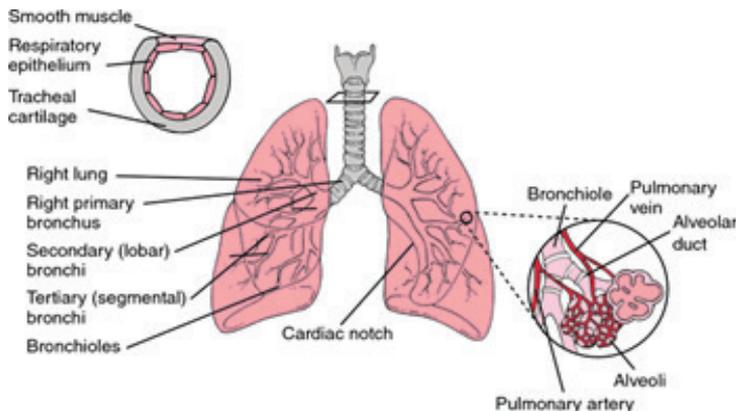

Alongside the egg-shaped block, there are two more ceramic blocks. One of them is reminiscent of the lungs. The lungs are the most important respiratory system. They transfer oxygen from the atmosphere into the bloodstream. The breathing process keeps us alive.

An elongated ceramic block that resembles a lung's wing

Lungs in humans

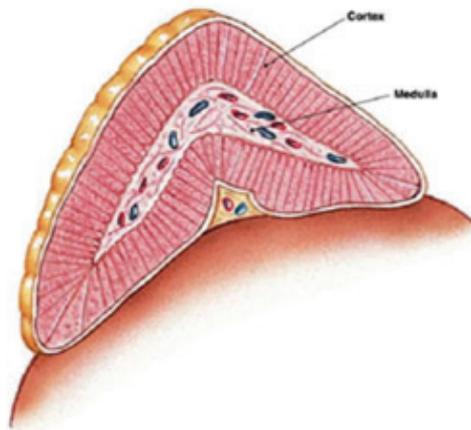

The third block has a triangular shape. Among the human organs of this form is the adrenal gland. Adrenal glands are known as ‘hormones that preserve life’. They regulate the transport of minerals and water,

carbohydrates, proteins and lipids, estrogens and hormones, causing adrenaline.

Triangular ceramic block

The human gastric gland

The topmost ceramic block in tunnels is certainly 'K-2'. His characteristic form could be compared with several human organs, including the intestinal system. The intestines are 'other brain'. Awareness from the depth of the intestine or intuition, causes tiny sparks, electricity in the intestines. Pure intestines mean perfect health.

Mega-ceramic block K-2

Crimping system in man

If these blocks are designed specifically to match human organs, does this mean that keeping them in mind is an opportunity for the organism to feel the frequency that can help restore the disorders of human organs to the original balance?

The underground labyrinth of Ravne will raise more questions for a long time than we will receive an answer. Therefore, a multidisciplinary scientific method is the best way to reasonably answer all inquiries.

CHAPTER 3.

HOW THE BOSNIAN PYRAMID ENERGY AFFECTS HEALING PROCESS?

There are hundreds of testimonies about the beneficial effects of visiting the prehistoric Underground Labyrinth Ravne, which have been carefully recorded and documented by the “Archaeological Park: Bosnian Pyramid of the Sun” Foundation.

In terms of the human health, the Foundation is aware that these are delicate and sensitive situations. However, it’s decided to share these testimonials with the public, with their consent, because the energy of the pyramids might help other people as well.

During the eleven years of the persistent, systematic, interdisciplinary scientific approach, the Foundation teams have pioneered in the science of the pyramids on the global scale. Firstly, they’ve proved that in the heart of Bosnia there is the greatest and the oldest pyramidal complex constructed in the world. Further on, the expert teams on the energy phenomena (physicists, electrical and communication engineers, sound engineers) have confirmed that the pyramid is, in fact, a giant energy amplifier (intensifier) producing various types of the energy.

The application of these energies is performed on several levels: (1) in the long-distance communication through the scalar waves emitted at the top of the pyramid, (2) the protection of the most important thing for us, our health, by generation of the best electromagnetism, the levitating ultrasound frequency (28 kHz), and the maintenance of the Planet’s natural frequency – Schumann’s Resonance (7, 83 Hz). In addition, the energy of pyramids affects also (3) the refinement of the molecular structure of the water and (4) food, (5) the betterment of the human immune system, (6) the enhancement of the bioenergetic field (aura), (7) the better balance of the energy of the chakras, (8) the improvement of the mental and spiritual side, etc.

Therefore, the revolutionary conclusion of the exploration of the pyramids in Visoko is that the purpose of the pyramids is not to represent the tomb for a dead human body, king, or pharaoh, in fact, they were built for the communities of living people, intended to last for thousands of years. Of course, the orthodox scientists are hard in accepting the change of the scientific paradigm. If they don't understand something (or don't want to understand) then they are attack and mocking. But the time will come when all explorers of the pyramids in the world will follow the footprints of the exploration of the Bosnian Pyramids.

The Underground Labyrinth Ravne was constructed 30,000 years ago as an integral part of the pyramid complex in Visoko. It spreads on ten kilometers, and up to this moment, the Foundation has cleaned and suspended over 1,950 meters. The high presence of the pyramid energy is recorded inside the tunnels, as well as many other factors which contribute to its beneficial effect, such as:

- The high concentration of the negative ions for which it's medically proved to have the beneficial effect on the health because they clean the atmosphere from the dust, they raise the oxygen level in the blood and lower the number of viruses and bacteria. The negative ion concentration is one hundred times higher than in the cities, and ten times higher than, for example, in the forest of the Igman Mountain near Sarajevo, which is usually taken as the reference of the healthy environment.
- The absence of the natural radioactivity, the values are ten times lower than the minimal values allowed,
- The absence of the negative cosmic radiation
- The absence of the mobile phone signal (harmful frequency of 0, 85 GHz, which is all around us)
- The absence of the Internet Wi-Fi signal (harmful frequency of 3 GHz, 4 GHz, or 5 GHz) which is ever-present)
- The absence of the geopathogenic radiations (strategically placed ceramic blocks in the tunnels neutralizes the negative energy of the underground waters and Hartmann's Crossings).

When visiting the tunnels, the cells in our organism don't have the external enemies and become able to begin their "job" – solving the problems inside the body. The regeneration process begins, i.e., the individual self-healing process.

The Foundation has financed the implementation of the medicinal pilot study. The results were very positive; the laboratory test showed the deceleration of the erythrocyte sedimentation on almost every person tested after one visit only, which indicates that the processes of improvement of the immune system and prevention of the infection development commenced almost momentarily.

The Italian Doctor Simone Zoccarato, after taking the tests on the living blood of the tunnel visitors in September 2017, using the dark microscope, has brought the following conclusion:

“We've applied the Live Blood Test (LBT) to see if the tunnels have any biological effect on the human metabolism. The general results are (1) the unusual increase of the numbers and the activity of the white blood cells, as well as (2) the enormous increase of the body tissue detoxification”.

The Underground Labyrinth Ravne and the archaeological sites at the Bosnian Pyramid of the Sun are open for the public visit during all 365 days a year.

Notice: The Foundation doesn't deal with healing treatments. The Foundation doesn't give any medicinal guarantees. The Foundation doesn't claim that the visits to the pyramids and tunnels are the substitution for the regular medicinal therapies and drugs. The visit to the tunnels is done on the personal responsibility of the individual. The Foundation deals with scientific-archaeological research of the Bosnian Valley of the Pyramids, but it publishes the individual testimonies of the visitors.

CHAPTER 4.

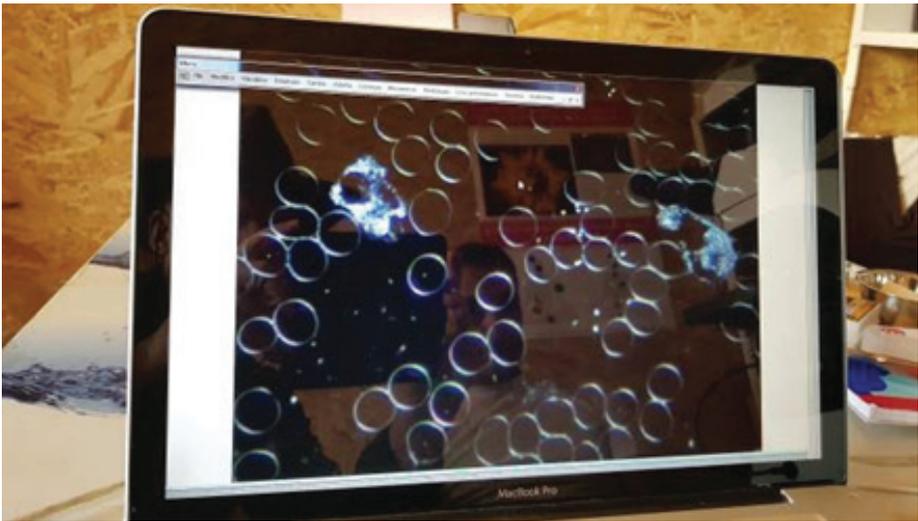

DR. SIMONE ZOCCARATO:

THE BLOOD ANALYSIS BEFORE AND AFTER THE TUNNEL

From September 13-19, 2017, the Italian Doctor Simone Zoccarato, M.D. has made the analysis of the blood samples taken before and after going to the Underground Labyrinth Ravne. These are the sophisticated analyses which aren't performed in the traditional way in the hospitals. With the microscope, the Italian expert analyzed the way how the tunnel's energies affect the function of the white and red blood cells in the organism.

The sample results have shown that the structure, mobility, shape, and function of the red and white blood cells is significantly improved after staying in the tunnels. More detailed examinations showed that the tunnel's energies dissolve the toxic deposits which aren't affected by the healthy diet or physical exercise. Later, these toxins travel with the blood through the liver, bladder and skin and get disposed from the organism.

The conclusion is that the stay in the Tunnels Ravne definitely improves the blood structure in the organism and its ability to fight the intruders and the bad fat and that the detoxification process and toxic disposal from the organism are in progress.

CHAPTER 5.

DISCOVERY OF THE TESLA'S TORSION FIELDS ABOVE THE BOSNIAN PYRAMIDS

Abstract: The energy phenomena registered above the Bosnian Pyramid of the Sun request a different definition of the pyramids instead of the conventional, dogmatic explanations. The pyramids are energy amplifiers which have been sending and receiving information. The discovery of the Tesla's Torsion Fields above the top of the Bosnian Pyramid of the Sun, travelling faster than the speed of light, withholding energy while passing through the cosmic bodies, empowers the concept of the existence of the Cosmic Internet providing almost instant, intergalactic communication in the Universe.

Fifteen years ago, in my books, I wrote about the role of Mayan's as the "cosmic watchmakers" and a civilization whose goal was to harmonize our planet's frequency with the Sun's. This hypothesis I had, for the time being, Wikipedia Editors used as the "argument of discrediting".

My research and arguments that the pyramids were constructed all over the world and that the oldest ones are also the superior have led to the situation in which the Egyptologists built up the hostility wall in my direction. My assertion that the Bosnian Pyramid of the Sun is the oldest in the world has provoked the reaction of the world's most influential Egyptologist, Dr. Zahi Hawass, and banning us for many years the access to the leading scientific TV channels in the world. Our evidence of the oldest concrete of the best quality in the world which has been discovered on the Bosnian Pyramid of the Sun and the existence of the largest network of the prehistorical tunnels have caused the written petition of the European Archeological Association against our research.

Of course, the time and the scientific arguments prove that we were right and they were wrong.

Therefore, the new history is getting written, not only of the Europe, but the whole World as well.

But it's not only that the history books are wrong inside our education system. We are taught wrongly, or to say it better, programmed, with all of the basic knowledge.

The physicists, astronomers, and geologists... persist with the assertion that the Big Bang Theory created the Cosmos out of nothingness and that today it's expanding rapidly. The biologists still support the Darwinism and incline that the life is created from inorganic matter, that evolution is the cause of wildlife development, and that the Human originates from a monkey. They were wrong. Life originates from an intervention on our planet. Species are changing over a long period of time through the experiments in which the evolution plays a small role and Homo sapiens are actually the result of genetic engineering. And, of course, we aren't the first or the most developed civilization in the Planetary history.

Philosophy, physics, mathematics, and engineering insights can explain the Cosmos, the creation of our planet, and life on Earth. But, along with conventional knowledge, it is necessary to de-programme and open up to spiritual knowledge and sacred geometry in order to understand the energetical essence of all living and unliving matter.

Let's put us in the role of the Creator of Cosmos. We start creating a large number of galaxies from the Center of the Universe. At the present time, the assumption is that there are about 400 billion galaxies in our Cosmos. These assumptions on the number of galaxies tend to rise in several past decades.

Each galaxy has many star systems. For example, in our galaxy the Milky Way it's estimated, up to ten years ago, that there were 100 billion stars. However, we speak about 400 billion stars now. Amongst these 400 billion is also our Sun.

Each Star has several planets. We are, for example, the third Planet in the Solar System. Furthermore, planets have moons sometimes one, sometimes dozens, etc.

Let's go back to the Creator's role. If we've created such immense and complex system with an almost endless number of cosmic objects, we ask ourselves how to manage them, how to monitor the condition of all objects, how to set up an efficient communication system?

Einstein's physics teaches us that the fastest speed in the Universe is the speed of light. 300,000 km/s is almost about enough for our earthly terminology. But, for light to travel from the Earth to the Sun it takes almost eight minutes. This is rather slow. To reach the second nearest star it would take four years for the light to travel. It takes 26.000 years to get to the Center of our galaxy, the Milky Way. Another 40.000 light years to get to the nearest Galaxy...

The speed of light would be very impractical and too slow for the Creator to have the communication with all of the cosmic "subjects".

Is there a speed greater than the speed of light? According to Einstein, no object with real mass in action could travel at the speed of light. However, to a whole new wave of independent researchers, the limitation of the speed of light isn't an obstacle for a faster speed existing. A German physicist, Prof. Dr. Konstantin Meyl says that neutrino particles are able to travel faster. He spoke about that in Visoko to our team in 2014.

For many other researchers, among which the most prominent is Nikola Tesla, scalar waves, or standing waves, created in torsion field interaction are travelling at faster speeds than the light. It's estimated to be 10 billion times faster speed than light. Thereby, the torsion fields can move through any other cosmic body (planets, suns) without wasting energy. This means they are able to travel at great velocity, transfer information/energy, and there's no loss of the quality and the quantity of the information.

Ideally it would be to have at both ends, two producers (generators) of

the energy, which are mutually communicating through Tesla's Torsion Fields (Waves). The information transfer is almost instant between two distant parts of the Cosmos, and the information doesn't lose any of its quality or definition during the transfer.

Many elapsed cultures on our planet have regarded the Sun as "the Father". Today, the archaeologists are trying to interpret the ancient beliefs and in a simple way interpreting the relation of some nations towards the Sun, as the "divine service" and the "sacrifice offering". It's the historical mistake to claim that the Mayan's have sacrificed their captives to the Sun God. Mayans didn't perform the offerings, but they've had respect for the cosmic Father. The Sun isn't only giving us heat and the energy, therefore, life itself, but it's also giving us information, it refines us and acts on our DNA. Short gazing at the Sun during sunrise or sunset is medicinal for us on the physical and spiritual level.

The pyramid is the most powerful of all geometric shapes in terms of the energies. If located over the potent energy spot the pyramid becomes an energy amplifier. Under the Bosnian Pyramid of the Sun, there are iron plates (generating an electromagnetic field), underground water flow (releasing negative ions), and a second, deeper underground water flow, creates the electricity together with the one from the above. Also, we find natural magnetism, Orgone energy... These energy phenomena can be measured with our scientific instruments. But how can we measure the energy phenomena for which we haven't yet developed the scientific instruments?

During the archaeological excavations, we've discovered great amounts of quartz crystal on the surface of the Bosnian Pyramid of the Sun. It's also found in the underground tunnels and most probably it can be found under the Pyramid itself. It's well known that quartz crystal is receiving and then amplifying the energies. The cavities (the underground tunnels) also amplify the energy. The spiral layout of the seven-leveled tunnel inside the Pyramid leads to the acceleration of the energy travel and to the amplification of its intensity.

Finnish researcher, Mr. Sci. Mika Virpiranta found that there are 26 volcanic lines leading towards the Bosnian Pyramid of the Sun. Namely, if the Pyramid is lying on the line that connects two volcanoes than it's lying on a volcano line. In the case of the Bosnian Pyramid, 15 of 26 lines have three, four or five volcanoes on the line. This fact, again, points out the importance of the location in Visoko, because the volcanoes are followed by the energy sources: lava, iron, crystals, minerals... If we add up the very precise layout of the Pyramids in Visoko (equilateral triangle between the pyramids of the Sun, Moon and Dragon, and another triangle between pyramids of the Love, Earth and River Fojnica) and the applicability of the other elements of the sacral geometry ("Flower of Life", irrational numbers, Fibonacci formula) then there is no doubt that all of this contributed to the development of an energy complex of great power which we've named the Bosnian Valley of the Pyramids. Its original boundaries might never be discovered; not only five or possible eight pyramids as we think today, two or three tumuli, two levels of underground tunnels.

The energy flow had greater intensity and was much stronger. Our planet was stronger and healthier in the Past, until the global catastrophe manifested, and the last Ice Age occurred 12,000 years ago.

Research of the physicists, electrical engineers, anthropologists, and sound engineers on the energy phenomena over the Bosnian Pyramid of the Sun, as well as on the other pyramids, tumuli, Ravne 1 and Ravne 2 Tunnels, along with the comparison with other natural hills around Visoko have been taking place since 2010. The teams from Croatia, Italy, Finland, Serbia, Germany, and other countries have discovered, among other, the existence of an energy beam over the Bosnian Pyramid of the Sun with the frequency of 28 kHz, which is focused and continuous. In September 2016, an international team from Serbia, Croatia, and Slovenia, led by the engineer Goran Marjanović from Belgrade, went one step further. They have mounted the instruments on a drone and took it 50 meters above the Bosnian Pyramids. During the flight, it went horizontal every 10 meters, on all four sides of the world.

The electrical field was measured over the top of the Bosnian Pyramid of the Sun. After two months of information processing, the engineer Marjanović had two revolutionary conclusions:

- The energy beam over the pyramid top, with the previously established radius of 4.5 meters, is expanding in radius and getting stronger. It's strongest at 21.3 meters above the pyramid, after what it gets weaker intensity when at 43.3 meters it has the same value as at the null point, on the ground. Or, in Engineer Marjanović words:

“The image shows the “E” field signal recording in a horizontal flight registered at 43.3 meters in the ninetieth second of the flight. The recorded value VRMS (Median Value/Median Square) on this “spot” is 156 mV and it is very close to the value measurements on the ground at the 0 position, 0 seconds of flight, with 150 mV. It is very interesting that during the takeoff (from position 0 to 1) the “E” field signal recordings grew along with the changes in height and afterwards dropped down to the value it had at the position 0. The more detailed description shows that the registered intensity of the field is the biggest at the 20th second of the flight, during the takeoff, at the reached height of 21.3 meters. The synthesis of the recorded values and the “E” field intensity allocation analysis in vertical and horizontal Aats allows us to conclude that the energy field above the Bosnian Pyramid of the Sun has the shape of an oval, uneven ellipsoid with the biggest density of the energy at the height similar to the virtual height of the Pyramid. The represented “waviness” in relation to the intensity and the orientation, in the wave mechanics terminology, would be appropriate with the affirmative interferent process terms, i.e., amplitude “composition”, and the phases of the particular energy fields, and the constitution of “3D Standing Wave”, i.e., complex Scalar (torsion, axion, spinor, micro leptonic ...)”.

- For many years, we have wondered about the orientation of this energy beam: is it directed towards a particular solar system (Orion, Pleiades, Alfa Centauri, etc.) or towards a particular planet in another solar system? The Earth's rotation of 462 m/s doesn't give enough time to focus the beam to a particular cosmic object or

eventual information transmission. However, the findings of Goran Marjanović's team gave a completely logical explanation for the beam's direction. Namely, Marjanović found the following:

“The VRMS analysis of the registered values during the horizontal flight, at about 40 meters of height, indicates slightly raised values in the south-southwest zone which indicates that the beam is slightly inclined in the direction of south-southwest.”

Considering that the measurements were performed at noon and during the afternoon it is logical that the energy wave was following Sun's movement. This is convincingly the largest cosmic object. Therefore, the communication between the Earth and its star is ongoing, during most of the day.

The research performed by this team lead to the following conclusion:

“The 3D structure of the energy fields over the locations 1-Bosnian Pyramid of the Sun, 2-Bosnian Pyramid of the Moon, 3-The Bell Tower Hill, has a similar configuration analogue with the scalar field term, in the shape of an oval ellipsoid with the maximum density on 21.3, 25 and 13 meters, respectively. The represented “waviness” in relation to the intensity and the orientation, in the wave mechanics terminology, would be appropriate with the affirmative interferent process terms, i.e., amplitude “composition”, and the phases of the particular energy fields and the constitution of “3D Standing Wave”, i.e., complex Scalar Wave or Torsion Field.

The Cosmos with the endless, quick, and efficient communication couldn't exist if it's filled up with a vast number of black holes which are expanding and consume all on its way. Such Cosmos couldn't exist too if it is filled with never ending vacuum in which there are no particles which facilitate transport and communication. Therefore, the designed system with the existing communication needs another kind of a definition of the Cosmos and its elements.

The creators of the electrical cosmos idea, in which everything is based

on electrical particles, have been gaining more supporters because they explain in a logical way almost all the cosmic processes. They don't start the story with the irrational "Big Bang Theory".

What is rational is the existence of super-fast and super-conductivity Cosmos, without any internal discontinuity and black holes. The Cosmos is limitless and behind everything is the cosmic mind, the Creator. It created the Universe we have been given, with a greater attention to the monitoring of the processes and the state (vibrations) of all cosmic entities. Besides ours, it created endless numbers of other universes, and in order to visit them, it would be necessary to take a cosmic dimensional leap.

We are all just a part of the cosmic Internet together with all other cosmic entities in space including our Creator. The information transmission is almost instant regardless of the fair distances.

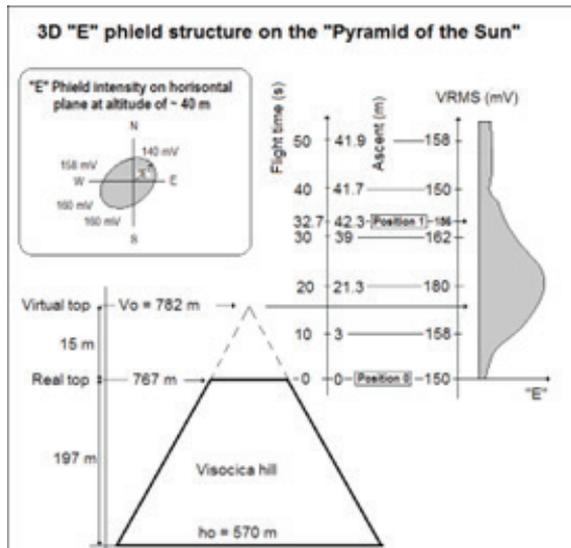

Thereby, the Bosnian Pyramid of the Sun, on our small mother Planet, is a link in the cosmic Internet.

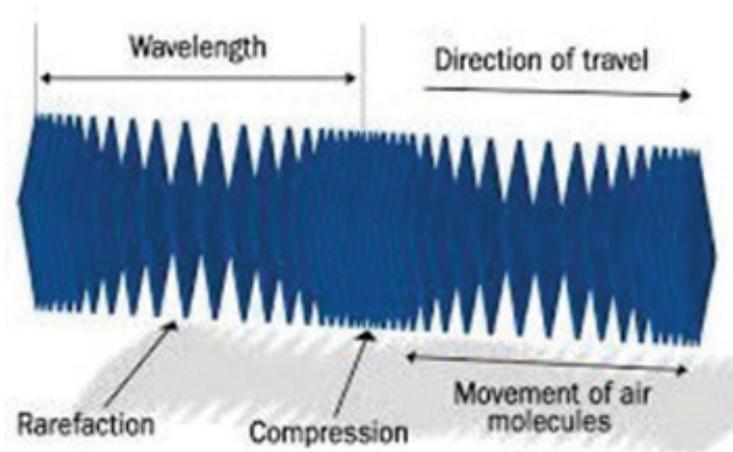

Bosnian Pyramid of the Sun

From the Centre of the Universe to the Earth, and back

CHAPTER 6.

UNITED STATES CONGRESS RECOGNIZED DR. SAM OSMANAGICH

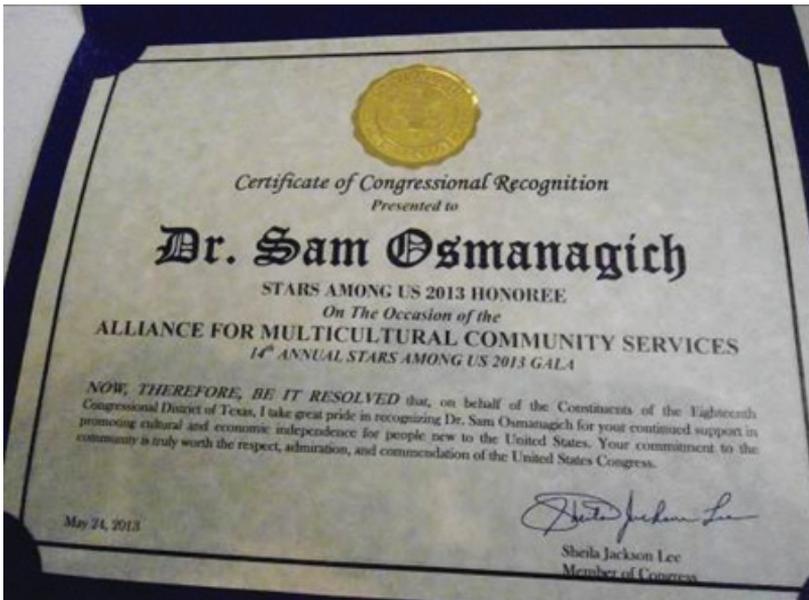

Discoverer of the Bosnian Pyramids and businessman from Houston, Bosnian-born American author and researcher **Dr. Sam Osmanagich, Ph.D.** has received United States Congressional Certificate of Recognition on May 24th, 2013, by distinguished U.S. Congresswoman Sheila Lee Jackson.

He was recognized “for continuous support in promoting cultural and economic independence for people new to the United States of America.” Congresswoman Sheila Lee Jackson underlined that “Osmanagich’s commitment to the community is truly worth of respect, admiration and commendation of the United States Congress.”

Certificate was dated May 24, 2013, stamped by the *House of Representatives*, and signed by Congresswoman Jackson.

Dr. Osmanagich received Certificate during the gala dinner at Westin Galleria hotel in Houston in front of City and County Council persons, County and Municipal judges, President of the University of Houston, media, and other public figures.

During the ceremony, Osmanagich also received an honor “Stars Among Us” for his community service and career’s achievements. This honor is traditionally given by the Alliance for Multicultural Community Services from Houston. Alliance has been serving refugees, immigrants, and Houston’s low-income residents since 1985. Osmanagich served as a voluntarily member of the **Alliance’s Board of Directors** in a period 1995-2005. First honoree “Stars Among Us” was legendary “Houston Rockets” basketball player **Hakeem Olayuwoon** (Nigeria) in 1999.

CHAPTER 7.

INTERVIEW FOR THE DISCOVERY MAGAZINE

December 17, 2017

► What is the current status of your Valley of the Pyramids excavation? The Bosnian Pyramid project has begun in 2005 and became the most active archaeological site in the World with over 400.000 working hours so far. Every year we have hundreds of volunteers and dozens of experts from different scientific fields investigating the site.

How much excavation has been done, and how much work remains? When do you expect to reach completion?

We have uncovered 18 archaeological sections on the Bosnian Pyramid of the Sun. The biggest one is 50 x 70 meters, which is unusually large for the archeological site because all the work is done manually. Also, we have 64 archaeological trenches on the Bosnian Pyramid of the Moon revealing artificially made pavements and terraces, and several trenches on Temple of Mother Earth and Tumulus complex in village Vratnica. We've discovered three entrances to underground tunnels. We cleared 150 meters in 'KTK' tunnels, 1.950 meters in 'Ravne' tunnel labyrinth and 15 meters in 'Ravne 2' tunnels. However, this is just a fraction of huge complex above and below the ground. Bosnian Pyramid of the Sun is five times bigger in volume than Great Pyramid of Egypt and it's completely covered by soil and vegetation. It would take long time even if we have unlimited funds to finance the process of uncovering and employing thousands of workers, dozens of archaeologists, and all mechanization. Underground Labyrinth Ravne is tens and tens of kilometers long. We have cleared, from the filler material, almost two kilometers, which is a worldwide sensation to have so much of the prehistorical tunnels discovered. This is the largest pyramid complex ever built on the face of the Planet and there is still huge amount of work to do.

However, what we have discovered so far is amazing:

- These are the first pyramids discovered in Europe.
- The site includes the largest pyramid structure in the world—The Bosnian Pyramid of the Sun - with its height of over 270 meters it's much higher than the Great Pyramid of Egypt (147 meters).
- The Bosnian Pyramid of the Sun has, according to the Bosnian Institute for Geodesy, the most precise orientation towards cosmic north with the error of 0 degrees, 0 minutes and 12 seconds (Cheops or Khufu has an error of 0 degrees and 2 minutes).
- The Bosnian Pyramid of the Sun is completely covered by rectangular and square concrete blocks. The properties of the concrete, including extreme hardness up to 133 MPa (modern concrete are in the range 10-60 MPa) and low water absorption (around 1%), are, according to the scientific institutions for materials in Bosnia, Italy, Czech and France, far superior to modern concrete materials.
- Beneath the Bosnian Valley of the Pyramids there is the most extensive underground tunnel and chamber network comparing to all other pyramid tunnels network (Egypt, Mexico, China)
- Mega ceramic sculptures have been discovered in the underground labyrinth with a mass of several tons which make them the largest found so far in the ancient world.

► What evidence have you found to support the authenticity of the pyramids, and to establish their age? What is the current status of your research on the concrete wall materials, and on the leaf fossils you have found within the pyramids?

We have established ten general scientific criteria for the pyramids and Bosnian Pyramids fulfill all of them:

1. Geometry – Bosnian Pyramid of the Sun is four-sided pyramid (three preserved and one damaged side)
2. Artificial construction material – Bosnian Pyramid of the Sun is covered in geopolymer, or synthetic concrete and Bosnian Pyramid of the Moon is built from the combination of sandstone plates and clay
3. Side orientation – Bosnian Pyramid of the Sun has the most precise

- orientation to the Cosmic North among all other pyramids (Shanshi in China, Giza in Egypt, Cahokia in Illinois)
4. Inner passageways and chambers – according to geo- physical measurements, there are seven level of tunnels inside the Bosnian Pyramid of the Sun with number of chambers.
 5. Underground tunnels – several entrances to those tunnels have been discovered.
 6. Water – two major rivers (Fojnica and Bosna) and lot of underground water streams are present.
 7. Sacred geometry elements – three major pyramids in Bosnia (Sun, Moon, Dragon) have distance between their tops of 2.180 meters and it forms equilateral triangle which is perfect geometrical shape and as such part of the sacred geometry.
 8. Astronomical features – Shadow of the Bosnian Pyramid of the Sun completely covers the Bosnian Pyramid of the Moon at the sunset during mid-summertime. The symbolical message is that the rule of the Sun and day is over, the rule of the night and Moon starts.
 9. Energy potent place – Below the Bosnian Pyramid of the Sun are several sources of natural energy: (1) Huge iron plate as a source of electromagnetism, (2) Under- ground water stream, at 21 meters below the pyramid, which releases negative ions, (3) Second underground water flow at 55 meters below the pyramid, between two flows electricity is generated, (4) Ultrasound – electro - magnetism is hitting quartz crystal located on pyramids, below them and in the tunnels. Through the piezoelectrical effect, ultrasound is generated, (5) Orgone (life, chi) energy is generated, as well. Measurements have shown presence of orgone energy of 25% in contaminated cities, 60% in villages and 100% at the pyramids in Bosnia. What the pyramid does, it amplifies natural energy sources. So, the Bosnian Pyramid of the Sun is an energy amplifier. How do we know that? We've measured the strength of electromagnetism at the base and top of the Pyramid. It's 50 times stronger at the top.
 10. Volcanic lines – Analyzing 75 pyramid and megalithic sites in the World, we've concluded that they were built on intersections of volcanic lines. ([http://piramidasunca. ba/eng/latest-news/](http://piramidasunca.ba/eng/latest-news/)

item/10511-volcanic-lines-and-bosnian-pyramids.html) Why volcanoes? Because they represent lava, iron, minerals, shortly energy. When we connect two volcanoes with the line, you get the volcanic line. We extend the line and if pyramid is laying on this line, then pyramid is located on volcanic line. Largest Mexican pyramid in Cholula is sitting on intersection of 18 volcanic lines, Angkor Watt pyramid temples on 16 such lines and Bosnian Pyramid of the Sun on 26 volcanic lines.

So, what is the result if pyramid fulfilled these ten criteria? The result is a new definition of the pyramids – Pyramid is an energy machine.

The pyramids are covered by soil which is, according to the State Institute for Agro-pedology from Sarajevo (Bosnia-Herzegovina), is approx. 12.000-15.000 years old. Structure below is obviously much older. Radiocarbon dating from the organic material (fossilized leaf) discovered on the top of concrete blocks on the Bosnian Pyramid of the Sun in summer 2012 and performed by lab in Kiev, Ukraine confirmed the age of 24.800 years +/- 200 years, giving us, again, minimum age of

the Pyramid. Finally, two more fossilized leaves were discovered between two layers of concrete blocks with the age of 29.200 years +/- 400 years. This is precise radiocarbon date of the structure. Calibrated date is 34.000 years according to American astrophysicist Dr. Paul LaViolette (<http://etheric.com/bosnian-pyramid-complex-signs-technically-advanced-ice-age-civilization/>). These consistent findings confirm that the Bosnian Pyramids are also the oldest known pyramids on the planet.

► What major discoveries have you made so far within the pyramid complex? I have read that you have found a system of tunnels under the pyramids that have the appearance of a labyrinth, and that you have found ceramic sculptures within the tunnels. What is the status of that work? Are there other important discoveries our readers should know about?

Most recent major discoveries:

- In October 2017 our non-profit, non-government ‘Archaeological Park: Bosnian Pyramid of the Sun’ Foundation has purchased 2000 sq. meters at the base of the pyramid. Archaeological digging in November 2017 has proven continuation of the concrete blocks which moved the official height of the Pyramid from 220 to 270 meters.
- In September 2016 an international team from Serbia, Croatia and Slovenia was sending drone above the Bosnian Pyramid of the Sun with different instruments to measure electrical field, magnetic field, ultrasound, infrasound, EM field, orgone concentration, temperature, etc. Most interesting measurement was in the area of electrical field. It has frequency of 28 kHz, it expands up to 20 meters and gets narrow down to 4,5 meters. It is oriented toward the Sun. So, what we’ve measured were torsion fields or Tesla’s scalar waves. According to work of Nikola Tesla and number of Russian theoretical physicists in the last 50 years they are much quicker than the speed of light. Therefore, they Are an ideal medium for energy/information transfer in the Universe. It points to first potential purpose of pyramids and their role as very powerful communication devices.
- Other recent discoveries are dedicated to the purpose of Bosnian Pyramids. We’ve noticed that visit to underground pyramid tunnels is very beneficial to human health. We’ve conducted several medical studies in 2016 and 2017 concluding that one-hour visit to the tunnels lowers high blood pressure, high glucose in the blood and high stress, it also improves structure, shape, movement, and work of red and white blood cells. It melts toxin deposits in the human body. We also publish a great number of filmed testimonials coming from visitors that show some amazing improvements anywhere from sinus infections, pains to Parkinson’s and tumors. (<http://piramidasunca.ba/eng/healing-testimonials.html>) So, second potential purpose of the pyramid energy is to protect what’s most precious for humans: our health and prolonged life. We’ve scientifically explained this phenomenon as combination of factors. First, present of the pyramid energies: best electromagnetism and

ultrasound of 28 kHz, original Schuman Resonance of 7,83 Hz (extremely low frequency), It is followed by high concentration of negative ions. As the medical science knows, negative ions are good for our health because they clear the atmosphere from dust and microbes, raise the level of oxygen in our body and kill viruses and bacteria. Concentration in our homes is very low, usually 100 negative ions per cubic centimeter, in downtown cities about 400, in villages 800, by the rivers 1.500, on the mountains in the forests 3-4.000. In Bosnian underground tunnels these values are between 20.000-60.000 making them underground healing facilities. Another factors: ten times lower natural radioactivity then minimum allowed, measured by Geiger counters, no negative cosmic radiations, no presence of mobile phone signals (bad frequency of 0,85 GHz), no Wi-Fi signal (extremely bad frequency of 4 GHz). So, when person enters pyramid tunnels, body cells don't have enemies and for the first time in our life they can do their job – regeneration process starts, self-healing. It's the healthiest way to heal the body.

- We've discovered several underground tunnels (40 meters below the ground) with water which has been there for very long time. We conduct regular conventional analysis: chemical and microbiological. Conclusion: no viruses or bacteria. Level of PH is ideal: 7,4. Other analysis performed in Slovenia and Japan have shown that this water vibrates very high, it has beautiful hexagonal molecular structure. In other words, it's energetically alive water. So, third potential purpose of pyramid energy is to improve the molecular structure of the most important liquid in our life: water.
- Next potential purpose is to improve the molecular structure of food. Our colleagues in India, Russia and elsewhere have conducted number of experiments showing that seeds exposed to the pyramid energy grow quicker, richer and healthier.
- Applying scientific instrument Bio-Well, developed by Russian scientist Professor Konstantin Korotkov from University of St. Petersburg, we've analyzed over 700 visitors to the Bosnian Pyramid tunnels before and after the visit from March 2017 – November 2017. Results: auric, bioenergy field and seven-chakra

system, stress level and energy in cells show improved results in 98% of cases. So, pyramid energy improves our body's energetical performance.

► What are your current theories about the civilization that made the pyramids, and the purpose of these megastructures? What is the status of your research on the pyramids as ancient energy machines and healing structures? What remains to be studied?

- We have five questions in archeology to answer: what, who, when, how and why. We've done more results in pyramid science in 12 years than Egyptology in 220 years since French re-discovered Egyptian pyramids. We're close answering the question when: it's about 30.000 years ago which matches Gunung Padang pyramid in Western Java, Indonesia which is 29.000 years old. It also matches period of 'gods' (not capital 'g') described in Turin King List when first kings of Egypt ruled.
 - Question what – it's huge pyramid complex.
 - Question how – geopolymer or synthetic concrete has been made with rocks, sand, water, and clay as a binder instead of cement. However, we don't know how they were manipulating huge quantities of material.
 - Question who – it was more advanced civilization than us, who knew more about the energy than us.
 - Question why – this energy machine would work on several different levels. They obviously knew that shape of the pyramid is most powerful geometrical shape when it comes to the energy, it amplifies natural energy sources. Different types of this energy can be used for communication, health protection, improvement of the molecular structure of the water, food, and agriculture in general, even to improve the society relationship.
- How many people have visited Archaeological Park: Bosnian Pyramid since it opened? How many people have come in the past year? Are you seeing an increase in interest?

- We've been recording a steady increase in interest for the Bosnian Pyramids. Back in 2010 we had 10.000 visitors, 2011 – 15.000, 2012 – 20.000, 2013 – 25.000, 2014 – 25.000, 2015 – 30.000, 2016 – 40.000, 2017 – 50.000. Many people come again and again.
 - This is a project that attracts a lot of volunteers, professionals, and non-professionals. We've had 2.900 participants in the last eight years, from 62 countries and six continents. There has never been such an interest in one archaeological project, and no one has offered such an opportunity to volunteers to become part of the huge discovery. Our volunteers discover artifacts, concrete blocks, new tunnels, record, and measure different energy properties... This is the most open project in the world of archaeology.
- ▶ Are your Archaeological Parks currently supported by the Bosnian government? Are you receiving the level of support you need to develop the park system and to conduct your research? How much funding do you think will be required to do all of the needed work?
- We have established Foundation for scientific and archaeological re- search registered by the Ministry of Justice. We've received all necessary permission to dig and do interdisciplinary scientific investigation. We've had most of the Government representatives from different levels (Federal, Cantonal, Municipal) visiting the Bosnian Pyramids. However, we don't ask for the Government financial support or grants. Namely, Bosnia is the poorest European country which can't afford to have yearly financing of our investigation. The Country has different priorities. Therefore, we self-finance the project through the tourism.
- ▶ Might there potentially be more pyramids and other megastructures still to be discovered in the Balkans? Is that part of your research today?
- The Balkan area has been populated, according to the anthropological genetics, for 38.000 years. It has witnessed the passage of many societies and civilizations. There are more pyramids, megalithic

structures, stone ball concentrations under the ground. People report some of them to us and we do some research on those sites.

► What is the status of your research on the stone balls? How many have you now discovered? What have you determined about their size and composition and age? How have you dated and authenticated them?

- The Stone balls are a pre-historical phenomenon. I've been studying them from Costa Rica, Mexico, Easter Islands to Egypt, New Zealand, Turkey, Russia, France, Albania, Croatia, Serbia, Slovakia, Poland... Our Foundation has discovered 20 different sites in Bosnia-Herzegovina with stone balls. The biggest one was discovered in 2016 in town of Zavidovici, Bosnia with the mass of 37,32 tons. It contains iron oxide, muscovite, quartz and magnetite (all energetically active elements). Binder is basalt cement. (<http://www.booksbydrsam.com/books/energy-points.pdf>, last chapter).
- Generally, stone balls around the World were built from different materials: granite, sandstone, limestone, and shaped volcanic stone. Their properties are always very hard and very often with high content of iron. They were crafted very long time ago considering that in most cases they were discovered deep under the ground. Many more will be hidden from us forever. At this point we could only speculate about their purpose. However, even that is better than the approach by geologists who claim that they are all natural phenomenon because they are programmed to think that there were no developed civilizations before 'Neolithic' times.

► What purpose might the stone balls have served? How might they relate to the pyramids? Do you see any connection to the stone balls in other places around the world such as Costa Rica?

- If you spend so much time in crafting hard, almost perfectly spherical stone balls, it has to have significant purpose for the society. In a case of Costa Rica, 300 stone spheres were discovered, by chance,

in 1940s. Material is granodiorite, the strongest in nature. We would need diamond tools and cranes to repeat this work. Their original number is most probably in thousands if not in hundred thousand. Some of the ancient civilizations understood that three most powerful shapes were pyramid, cone, and sphere. If located above energy potent places, they amplify the energy.

► With the increase in range and scope of your discoveries, are you also expanding your collaborations with other archaeologists and scientists in other fields? Do you have more conferences planned and/or papers and books underway?

- We have had five International Scientific Conferences in the last twelve years with over 90 scientific papers on Bosnian Pyramids. A great number of mostly independent researchers regularly visit our complex in Bosnia. (Personally, I write and publish one book every year. The last seven are available for free reading here: www.booksbydrsam.com.)
- As an example, these are some of the scientists who actually visited and researched the Bosnian pyramid site:
- Nabil Swelim, triple Ph.D. in archaeology (Egypt), spent 15 days in Bosnia: ‘Bosnian Pyramid of the sun is the biggest pyramid on the Planet. It’s genius and complicated construction project of interest for the whole World (2008, ICBP Scientific Proceedings)
- Professor Oleg Khavroshkin, double Ph.D., geophysicist (Russia), 20 days in Bosnia: ‘Bosnian Pyramids match Egyptian as far as shape, form, and seismic values. They are not natural formations.’ (2007)
- Paul Von Ward, M.Sc. (Harvard University, USA), 5 days in Bosnia: ‘Bosnian Pyramids are one of the most interesting discoveries in archaeology’ (2010)
- Professor Ezra Zubrov, Ph.D., archaeologist (Buffalo State University, USA), 2 days in Bosnia: ‘You have to find out who built Bosnian Pyramids, when they were built and what is the connection between tunnels and pyramids’ (2011)

- Professor J.J. Hurtak, double Ph.D., pyramid researcher (USA), 7 days in Bosnia: ‘Egyptology will have to change the definition of the pyramids after Bosnian Pyramid discovery’ (2013)
- Valery Uvarov, pyramid researcher and pyramid builder (Russia), 30 days in Bosnia: ‘Pyramids in Visoko are among the oldest constructions ever built on the Planet.’ (2014)
- Paul La Violette, Ph.D., astrophysicist (USA), 7 days in Bosnia: ‘Bosnian Pyramids are the biggest discovery in archaeology’ (2014)
- Engineer Goran Marjanovic, (Serbia), 35 days in Bosnia: ‘Bosnian Pyramids are artificial structures, carefully created by unknown technology with the purpose to guard primary cosmic vibrations.’ (2016)
- Professor Konstantin Korotkov, Ph.D. quantum physicist, (Russia), 6 days in Bosnia: ‘Discovery of the Bosnian Pyramids match discovery of Mayan pyramids.’ (2017)

► Some mainstream scientists have expressed skepticism about your claims, doubting the manmade origins of the pyramids and balls. They have claimed that both the pyramids and balls may have been the result of natural geological processes. Do their claims have any validity? Why do you think your excavations and ideas have been criticized by members of the scientific establishment?

- Let’s list some of them:
- Zahi Hawass, most influential Egyptologist in the last two decades (Egypt): Hawass, referred to several large blocks that had been excavated by the research teams, explaining that ‘No one can say that these stones were transported by human beings since they weigh approximately 40 tons. His explanation for the ‘pyramid shaped hill was that Osmanagich must be hallucinating’ (2006). It seems that he forgot that in his own backyards there are blocks of 80 tons in Cheops pyramid, 220 tons inside the Chepren pyramid, and 1200 tons in nearby Baalbek, Lebanon. By the way, Zahi Hawass has never visited the Bosnian Pyramids.
- Dr. Mike Heyworth, Director of the Council for British Archaeology

and Dr. Hermann Parzinger, President of the German Archaeological Institute, accused Osmanagich of ‘duping the world with the claims of pyramids in Bosnia. In their statement it read – This pyramid scheme is a cruel hoax on an unsuspecting public...’ (2006) They have never visited the Bosnian Pyramid site.

- Dr. Brian Stewart, University of Michigan: ‘He and his team have essentially sculpted the sides of these natural hills into something they think resembles pyramids...’ (2015) He has never visited the pyramids in Bosnia.
- We could go on with similar baseless statements. None of them have done a single sample testing to disprove our results, they never did any lab analysis, radiocarbon dating, energy measurements. So, they don’t have scientific arguments, only personal opinions. As we know, opinions are irrelevant in the world of science.

► What can your discoveries tell us about other ancient pyramids and megastructures around the world? What can modern civilization learn from the civilization that built the pyramids and crafted the stone balls? Can we make good use of their technologies today?

- Thanks to our research we need to change the classification of the pyramids. Instead of calling them Chinese, Egyptian, Peruvian, Mayan, etc. we need to call them original and replicas. Original pyramids are the biggest, most superior, and oldest energy machines, in China (20 out of 250), dozen in Egypt (out of 155), several hundred in Central America (out of tens of thousands in Mexico, Guatemala, Honduras, El Salvador and Belize), several in Peru, Bosnia, Cambodia (Koh Ker), Indonesia (Gunung Padang). My investigation on pyramids around the World (free book at: <http://www.booksbydrsam.com/books/pyramids-around-the-world-2014.pdf>) show that pyramid knowledge has been brought. There is no evolution.
- The Bosnian Pyramids have been around thousands of years before us. They will be there thousands of years after we’re long gone. So, why don’t we use our short lifespans to learn from their builders.

They knew our planet, energy sources and frequencies better than we do, how the shapes and sacred geometry can affect the energies and how clean and free energy can be produced. They lived in the harmony with the nature.

- This is the way to improve our society which is based on materialistic goals exclusively, followed by technology that generates bad frequencies and industries that contaminate air, land, and water.
- Therefore, The Bosnian Pyramids not only change our history forever, but have potential to change our future for better.

CHAPTER 8.

ORGONE (LIFE) ENERGY MEASURED ON BOSNIAN PYRAMIDS

Bosnian Pyramid project is an interdisciplinary scientific investigation which involves classical sciences such as archaeology, geology, pedology, with high tech disciplines (geophysical research, geothermal and georadar analysis, LIDAR) and energy measurements (electric and magnetic fields, ultrasound and infrasound, Schuman resonance, negative ion concentration, oxygen level, magnetotelluric and electrodynamics).

Among other instruments, we've been using Experimental Life Energy Meter, Heliognosis model LM3 (Or, Range, Fine, Coarse, & deflection %). American company Heliognosis is a manufacturer of this instrument which is based on the same principle as Wilhelm Reich's devise (Orgone Field Meter). Shortly, its ability to receive electromagnetism shown on the scale from 0-100%.

Orgone energy measurements have been done regularly from 2012. Instrument LM3 shows the following values in the Bosnian Valley of the Pyramids:

- Bosnian Pyramid of the Sun (artificial pyramid structure): 100%
- Bosnian Pyramid of the Moon (artificial pyramid structure): 100%
- Tumulus in Vratnica (artificial conical hill): 100%
- Underground Labyrinth Ravne (prehistorical artificial network of tunnels and chambers): 100%
- The Bell Tower (conically shaped hill in our park 'Ravne 2'): 100%
- We have done measurements at the other locations, such as:
- Natural hill 'Vis', near Bosnian town of Tuzla, near the village: 50%
- Montevecchia, shaped hill, No.1, village in Italy: 48%
- Montevecchia, shaped hill No.2, village in Italy: 70%
- Montevecchia, shaped hill No. 3, village in Italy: 50%
- Santa Agata dei Goti, natural pyramid hill, village in Italy: 65%
- Rtanj, pyramid mountain in Serbia: 100%

- Sarajevo, capital city of Bosnia: 25%

Relative values of life energy, or orgone, or chi, or prana, or zero-point energy... differ in contaminated cities (20-25%), villages (50-60%) and pyramid (built or shaped) structures, where values reach 100%.

In a case of Bosnian Pyramid tunnels, we have measured beneficial effects of the pyramid energies which is due to the following factors: best electromagnetism, best ultrasound frequency of 28 kHz, original Schuman resonance of 7,83 Hz, high concentration of negative ions up to 50.000 ni/ccm, absence of harmful cosmic radiation, natural radioactivity, Wi-Fi and mobile phone signals. When 100% of orgone energy is added, we have perfectly protected place where our body comes back to the balance and self-healing process is initiated.

Ancient pyramid builders knew how to determine energy potent location for pyramid structures. Pyramid would amplify existing natural energy sources. Therefore, pyramids are energy amplifiers. Good thing is, they amplify natural frequencies which are beneficial to us. They amplify (or generate?) orgone energy, as well.

It seems that shape of four-sided pyramid is the best suitable for our planet. It improves the molecular structure of people, plants, animals, water, food, space. It gives us more of the invisible, but omnipresent life energy.

CHAPTER 9.

DISCOVERY OF THE BIGGEST STONE SPHERE IN THE WORLD

Ancient civilization researcher Dr. Sam Osmanagich, Ph.D., has been exploring the phenomenon of prehistoric stone spheres for two decades all over the world. He has visited sites in the southern Costa Rica, western Mexico, on Easter Island, Turkey, the island of Isla del Cano in the Pacific, Tunisia, Canary Islands on several occasions. There are also some in Antarctica, New Zealand, Russia, Egypt, USA, Argentina ... In the Balkans, he wrote about the stone spheres from northern Albania, the Dalmatian hinterland in Croatia, west and south- west Serbia.

The story about them started when they were first discovered in the Diquis Delta of Costa Rica. Since the 1930s, hundreds of stone balls have been documented, ranging in size from a few centimeters to over two meters in diameter. Some weigh 20 tons. Almost all of them are made of granodiorite, veery hard, igneous stone. No doubt, they were made by intelligent hands.

When Dr. Sam established the “Archaeological Park: Bosnian Pyramid of the Sun” Foundation in Sarajevo, Bosnia-Herzegovina, he has formed the team for the systematic studies of this phenomenon in Bosnia and Herzegovina. After first decade, they have found them at twenty different locations: eight shaped granite spheres in the village Teočak near north-eastern city of Tuzla, volcanic stone sphere near Konjic in the central part of Bosnia, and those built of sandstone in the villages Trn and Slatina, near north-western city of Banja Luka and then in towns of Vares, Zenica, Bihac, Zepce, and elsewhere.

The largest site is near central Bosnian town of Zavidovići, in area known as ‘Duboki potok’ (‘deep water stream), where once were 80 spheres. Some ended up lower, in the river Bosnia, and most were broken by the local residents in search of treasure they never found. Part of them decorate private properties, but eight still preserved stone spheres are lying in the creek. In September 2006, at the initiative of

the Foundation, “Archaeological Park: Bosnian Stone Spheres” was established, which was converted into a tourist attraction. It’s regularly maintained and receiving visitors from all over the world.

In 2007, Professor Muhamed Pasic from University of Zenica took four samples of damaged stone spheres in Zavidovići, and the sample of natural rock material and analyzed them at the Institute for Materials in Zenica. Physical-chemical analysis showed the presence of the same nine elements, in the same proportion in the spheres and natural rocks. However, the difference was that the spheres also contained manganese, which is used to improve strength, and calcium oxide, basis for the binder material.

Conclusion: the ancient civilization melted natural stone and added additives to improve the quality, poured it into molds and built a very hard stone sphere.

In early March 2016, Foundation’s team started digging stone spheres in the village Podubravlje, on the outskirts of Zavidovići. Dr. Sam visited that location on March 19th 2016, with several media and a group of tourists from 13 countries.

This stone sphere had surface of less than one square meter, peering out of the ground for decades. Older residents of the area knew of its existence. However, recent excavations were started by several enthusiasts. Excavation was slow because of the deposited earth, hand tools and the desire to avoid damage to the sphere.

After ten days of digging, it became clear that this was a megalithic size ball. On the 19th of March, the excavated part was measured, which was slightly less than half the volume of the stone ball. The result: 3.80 m. The circumference was probably between eight and nine meters.

From there one can get the radius, which is between 1.20 and 1.50 m. To determine the mass, it is necessary to determine the density, and for that one needed to analyze materials that are present in the ball. What is

obvious, is the brown-red color of the ball, i.e., a high concentration of iron. Assuming density between the density of lime (2.2 kg /cm³) and iron (7.8), it could amount to about five kg/cm³.

In this case two preliminary values for the radius and density could be calculated that can determine the mass. First projection: it was more than 30 tons!

In Europe, at that moment, there was no stone sphere with more mass than the recently excavated sphere in Podubravlje.

Above the sphere there was sandstone layer, then a layer of clay, soil, and vegetation. This testifies to the enormous age of the ball, above which natural materials sedimentation occurred for tens and perhaps hundreds of thousands of years.

The largest stone sphere in Costa Rica weighs 20 tons. Only when the Bosnian stone sphere is completely cleaned, the exact radius would be known. Also, when the structure of the material is analyzed, it would be known whether this is the most massive stone sphere in the world. If it is made of cast iron, the answer would be a definite yes.

What would that mean? First, that the territory of southern Europe, the Balkans and Bosnia and Herzegovina, was the location of a very ancient, advanced civilizations about which there is no other trace. Second, that they knew technology quite different from ours. And third, they used a powerful geometrical shape ("Sphere") and an energy potent material (electromagnetism of iron) above the energy-potent points (water movement, release of negative ions).

This brings us to the possible purposes of stone spheres. Several skilled dowsers measured the impact of the energy of the stone sphere on bioenergetic field of visitors. Extension of the aura was recorded, and thereby increase in immunity. It seems that the ancient ancestors had better knowledge of the energy of the Planet and lived in harmony with it.

CONFIRMED: THE WORLD'S LARGEST STONE SPHERE IN A ZAVIDOVIĆI

The discovery of new stone spheres in Zavidovići in March 2016 sensationally echoed throughout the world. “Archaeological Park: Bosnian Pyramid of the Sun” Foundation has organized a wide media campaign for the presentation of the prehistoric phenomenon.

Foundation addressed several million recipients of e-mails it has in its database, including numerous world media. Once again, they spoke of the territory of Bosnia and Herzegovina as the site of the ancient civilization, much older than the conventional vision of human history.

The samples were sent to universities in Serbia and Bosnia and Herzegovina, and these are the analysis that obtained.

Geologist Miodrag Jovović from Belgrade has done petrographic (macroscopic and microscopic) analysis of the sample stone spheres, concluding that “texture is massive”, with the presence of “quartz, muscovite, iron oxide, magnetite,” and “carbonate base is basal cement”. Presence of energy-active elements is obvious.

Mining, Construction and Geology Faculty of the University of Tuzla determined the particle density (the ratio of the mass of particles to its volume). Master of Geology Mersudin Hodžić signed a report in which he determined the value of the density of 2.64 g / m³.

The volume of stone spheres is equal to the value of 14.14 m³.

Mass in kilograms was then simply determined by multiplying density (“specific weight”) and volume. The weight of the stone sphere in Zavidovići is 37.32 tons!

Large stone spheres of granodiorite I saw in Costa Rica were reaching 20 tons. In the western Mexico, near the small town of Ahualulco, at location “Piedras Bolas”, volcanic stone spheres reach 30 tons.

Measurements of the stone sphere in Zavidovići and comparison with the biggest spheres in Central America, confirmed that the Bosnian stone sphere is the most massive and largest in the world.

CHAPTER 10.

FIRST DESCENT INTO THE NEW TUNNELS - “RAVNE 3”

Tuesday, 28th August 2018, was a historic day for a group of volunteers led by geologist Richard Hoyle and supervisor Marie Sophie. The volunteers of the “Archaeological Park: Bosnian Pyramid of the Sun” Foundation carried out the first survey of newly discovered cavities – ‘Ravne 3’ tunnels. They managed to advance around 20 meters and to determine that the cavity branched out into several smaller ones.

Later, they were joined by Dr. Sam Osmanagich, Head of the Foundation, who recorded the activities on his camera. Entering the C-3 cave required a crawl of several meters through a narrow space between the ceiling (of conglomerate concrete) and inserted material (combination of dirt and gravelly material). Afterwards, the cave expanded to the height of about 120-140 cm. The first section contained several twigs, probably transported here by small animals (dogs or foxes).

The cave extends roughly in the north-south direction, and later it veers off towards the northwest. Small stalactites and stalagmites are scattered throughout, and they would provide a means to date the cave. A preliminary conclusion is that this is not a natural cave, but an artificial cavity – tunnel, that greatly resemble the Ravne tunnels.

This would offer more arguments to corroborate Dr. Osmanagich’s hypothesis that this cavity is a segment of a unique prehistoric tunnel network, which had been damaged by major tidal forces in the distant past, but the entrances to these tunnels had been carefully sealed by the members of a community unknown to us today.

CHAPTER 11.

DATING OF 'RAVNE 3' TUNNEL

In July 2018, I bought a parcel of land with the surface area of 5,141 m² in Visoko, adjacent to our Ravne 2 Park, on the western side, identified in the cadaster as 'Džanova strana'. It is a steep slope, covered in scruffy vegetation, a thicket, and it was filed as 'Forest, Class IV'.

I had reserved this parcel as early as July 2017, because I considered it important, as it borders the park, but also because of a detail I noticed when visiting the site. It was a conglomerate rock that protruded from the earth, which resembled conglomerate concrete found at the entrance to the prehistoric Ravne Underground Labyrinth.

After the purchase was completed, we sent the workers to clear the land and build a dirt road on the parcel's northern boundary. We built earthen staircase from the park. I was very satisfied after the surveyor marked parcel's upper boundary precisely. Multiple conglomerate rocks emerged on our parcel. The excavator revealed such rocks in five places.

Additional work of the excavator, following my instructions, showed that, in four spots, we could reach narrow passages from which one could sense streams of cold air. It was clear to me: underneath those rocks, there are entrances to underground tunnels.

I called Richard Hoyle, our field geologist, from England, and told him:

- 'Richard, I would like to ask you to determine the altitude of the entrance to the Ravne Underground Labyrinth, entrance to the Healing Tunnels underneath the Air Spa, entrance to the Orgon Chamber at the Bell Tower Hill, and the entrances to these possible tunnels. This is likely the same network of tunnels as the Ravne tunnels. At the time the last Ice Age ended, 12,000 years ago, a powerful tidal wave came from the north, tore off a portion of the

plate and wrecked some of the tunnel network. That wrecked section now lies below and constitutes what we call ‘Ravne 2’ Park. Once upon a time, this valley had not been here, and in its place stood a conglomerate plate covering tunnels.’

Richard measured the altitudes and informed me that all these points were on approximately the same elevation +/- 4 meters. This only confirmed my original assumption.

In August 2018, under Richard’s supervision, I gave our volunteers an opportunity to start clearing material around and underneath conglomerate rocks. At first glance, this material appeared to have originated as natural sediment, with a common stratigraphy: humus levels of different age (dark and light-colored), as well as a varied age of clay (light, dark, grey). Most geologists and archaeologists would have probably instantly discarded any thought that anything might lay beneath this ancient, compact clay. It takes tens of thousands of years for grey clay to form.

After they toiled for a couple of weeks, at my prodding, in late August the volunteers finally cleared a path, discovered a narrow passage, and managed to crawl several meters in. Ahead, they came across a chamber. They kept excavating and, beyond some clay type material, they uncovered a rock laid over some smaller plates. It had clearly been erected there to block the entrance to the tunnels. That was an important moment. We uncovered evidence of anthropogenic action.

At that time, I decided to cease excavation in that location, which we marked as C2 (Entrance no. 2). We left this rock as archaeological evidence of human action and we switched to C3. Several days later, we penetrated to the segment wide enough to allow us to enter.

Over the course of several expeditions, which involved Richard, Sue, Stefan, Marie-Sophie, Ajdin and others, we established the existence of several tunnel directions, with galleries broader than those in the Ravne tunnels. The two major axes were east-west (through the hill, underneath the urban area of Dubrave), but also north-south, parallel with the

Ravne tunnels.

The east-west direction allowed us to uncover 65 meters of traversable passages, with clear evidence that these cavities had been used in various past eras. The ceramic remains most likely come from the Middle Ages (which is also the view of our colleagues from the Visoko Homeland Museum), while the several iron artefacts most probably originated at the age of Ancient Rome, as many as 2,000 years ago.

In the central section of the east-west axis, in several places we encountered stalactites hanging from the ceiling, as well as stalagmites, which precipitated on the floor. I considered them to be an exceptionally important find. I recalled the experience of the stalagmites we discovered long ago, in one of the Ravne entrance tunnels. I had learnt then that stalagmites can be dated. By the way, the age of the stalagmites at the entrance to the Ravne tunnel was around 5,000 years. They were created after the ceiling had collapsed. At the time, I was told that, typically, it takes a very long time for the base preparation.

As we had a number of stalagmites on the floor, I was confident that we would not run out of them. And, secondly, that the dating we were going to obtain would be auspicious.

I instructed Richard to prepare a sample and to contact the Florida dating laboratory. After three days of slow cutting with small saws, he cut, prepared, and sent it to Florida, as per the website instructions. The very same day, upon his return from the post office, he received a letter from Italy, from the European representative of the Florida laboratory (Ms. Claudia Arigoni from Beta Lab Services), in which she informed him that ‘they do not conduct analysis for projects that are not recognized by the international scientific community’ (?). Richard was shocked by this flagrant discrimination. I was not.

This was not the first instance that we had unpleasant experience with radiocarbon dating laboratories. As the forms require the designation of the project (‘Bosnian Pyramids’ Project), the sender (‘Archaeological Park: Bosnian Pyramid of the Sun’ Foundation) and why it matters (‘minimum age of a tunnel network’), it was clear that the findings of

scientific laboratories would confirm the exceptional age of the pyramid complex in Visoko. That is a political issue for them.

In 2007, we experienced a clear example of politicization in science, when we sent the pieces of wood found in the Ravne tunnels to the address of three radiocarbon dating laboratories: Gliwice in Poland, Kiel in Germany, and Oxford in the U.K. The retrieved piece of wood we split into six equal segments, sent two to each of these three addressed and documented everything.

The first results we received from Germany. The sample was dated as 32,000 years old. Next, we received the analysis from Poland, dated to between 30,000-34,000 years. Evidently, both confirmed that the wood was older than 30,000 years. The English never responded, and when I intervened, they claimed that the sample was not organic, expecting that they were the only ones to have received the sample. Then I sent them all the documents with the findings of other laboratories, and I positively established that the sample in question was organic material. The ‘superior’ English were taken aback. Then, they ineptly tried to cover they politicking by claims that their equipment had not been functional, then that their staff ‘accidentally’ burnt both wood samples... Afterwards, we have never again used this laboratory in U.K, a typical example of elitist, politicized science.

Why did this dating matter? This chunk of wood had been trapped in a conglomerate found over our ceramic blocks in the Ravne tunnels. Therefore, these blocks had been made more than 32,000 years ago. Someone had a high-temperature manufacturing technology tens of thousands of years before conventional experts expected it. And where, at the heart of tiny Bosnia.

The history repeats itself. The Italian lady knew that we operate the greatest archaeological discovery on the Planet, but it is not the elites that control the process, but the independent, non-profit, non-governmental Foundation.

However, there are more than a hundred radiocarbon dating laboratories in the world, and there are no more monopolies. It is just another

scientific service, as so many others. Truth cannot be contained, not can knowledge and information be manipulated, as once they had been. The samples found in the new tunnels, which we designated 'Ravne 3', we sent to Kiev, Ukraine. We received the results very promptly. Several of the samples were dated between 2,500-10,500 years and these told us that these cavities were quite old and that they had been in use for a very long time.

In Kiev, our stalagmite sample was prepared following the standard scientific methodology. The stalagmite's cross-section was divided in three parts. The outer was most recent, created from water dropping from the ceiling. The first, oldest, core layer was created when the base for the creation of the stalagmite (dry matter, dust, and various other particles) was developed. A total of 20 grams and 1.5 cm of the thickness of that core were prepared for dating.

Through an application of the vacuum pyrolysis protocol (thermal destruction), an adequate quantity of carbon was obtained. Mixing it with lithium yielded lithium-carbide, then acetylene and benzene. Then the C14 radiocarbon isotope method could be applied to 1.0192 grams of the hydrocarbon benzene (C₆H₆) obtained in this fashion. Now we are on the path to determine the age of the stalagmite's core.

The result of the dating was fantastic: 26,200 +/- 200 years! So, radiocarbon dating indicated the age over 26,000 years. What is the actual age of this stalagmite?

First, when mechanically removing the stalagmite from the floor of the 'Ravne 3' tunnels, Richard did not cut to the very base. Around 1 cm of the stalagmite, essentially the oldest part, remained.

Second, calibrated age is typically 15% greater than radiocarbon age. However, as a fully precise method of dating organic material does not exist, a variance of several per cent or more is always to be expected.

Third, it takes time for the base to be naturally prepared for creation of stalagmites. This can take thousands of years.

In view of these three observations, a logical conclusion is that the actual minimum age of the stalagmite is between 30,000-35,000 years. The ‘Ravne 3’ tunnels are not just cavities, and they exhibit traces of shaping. Consequently, it is a tunnel network of exceptional age.

This takes us back to the time when the pyramid complex in Bosnia was constructed. I wish to remind you that the age of the organic material, fossilized leaves found between concrete blocks on the Bosnian Pyramid of the Sun is 29,200 +/- 400 years. American astrophysicist Dr. Paul LaViolette estimated the calibrated age of the pyramid at 33,600 years. We commenced clearing the ‘Ravne 3’ tunnels, which run along the north-south axis. They are parallel with the Ravne tunnels, although 200 meters apart. There is no doubt in my mind that, after several hundred meters, these tunnels will converge and continue towards the Bosnian Pyramid of the Sun.

That is our goal, to arrive underneath this largest and oldest of the world pyramids, despite the attacks of the cultural establishment from Bosnia and the entire world, which we experienced over the past 13 years. The fight for scientific truth is far nobler than bending your back to ‘authority’.

Unlike in the early years, 2005 and 2006, when the power of officialdom and ‘expert’ authorities had been used in the attempt to stop us, nowadays we are in position to have all scientific arguments on our side. And there are more and more of them every day.

Tens of thousands of visitors to the Bosnian pyramids have become aware that history is not what we had been taught. In time, new history textbooks will recognize this.

And from the Spring of 2019, our volunteers from all over the world will again, under the guidance of experts, be given an opportunity to become part of the discovery of the most exciting project in the world.

CHAPTER 12.

KEFREN'S PYRAMIDS IS AN ACTIVE ENERGY MACHINE

The fairy stories of the Egyptologists about the pyramids being the tombs of Pharaohs, came to an end. Pyramid complexes on the Giza plateau were not built by the Pharaohs of the Fourth Dynasty Cheops, Kefren and Mikerinos 4,500 years ago nor did they have the technology and engineering knowledge for such an undertaking. Mummies, hieroglyphics, tools, furniture, symbols, or organic material that bind these monumental structures to the famous pharaohs have never been found.

These pyramids were built over 12,000 years ago as complex energy machines. Russian experimental physicists in 2018 proved that Cheops's pyramid boosts electromagnetic radiation within the so-called King's and Queen's chambers.

With geophysicists, professors Khavroshkin and Tsyplakov, we proved this in the case of the Red Pyramid in Dahshur in 2013. At the top of the pyramid, the radiation was 50 times more intense than at the base of the pyramid. We made non-invasive shots on this pyramid because Egyptologists do not allow shooting on pyramids in Giza, where they have full access control.

During a visit to the Giza Plateau in December 2018, I brought a new instrument developed by Dr. Harry Oldfield from London. It is an enhanced version of PIP (Polycontrast Interference Photography) camera and is called NEV (New Energy Vision). The instrument registers the motion of photons. In the case of an active energy machine that draws energy through the top, then interaction with photons occurs and the camera clearly shows vertical bioenergetic fields.

Dr. Oldfield used this technology in Visoko in 2007 when it was clear that all pyramids in Bosnia were energetically active. Sasa Nađfeji from Belgrade confirmed this every year when shooting in Visoko, but also at the pyramidal peak of Rtanj in eastern Serbia.

I filmed Kefren's pyramid on December 16, 2018, and it was obvious that there was an interaction of the energy of the pyramid and photons in the atmosphere. In this way, for the first time it was confirmed that energy is released through the top of the Kefren pyramid.

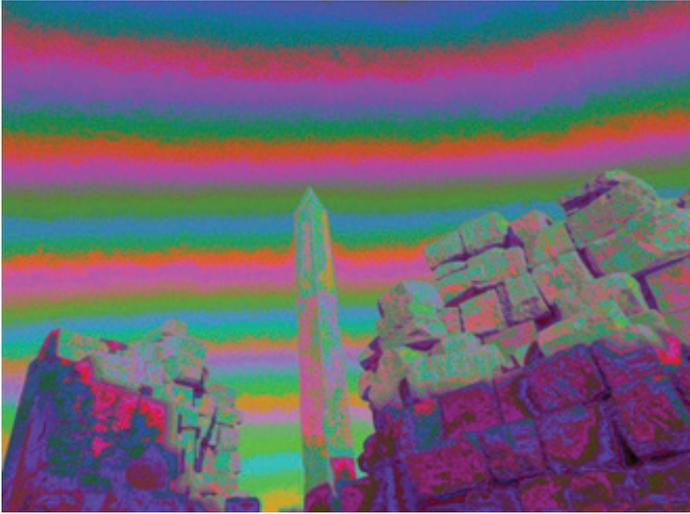

Therefore, the Kefren Pyramid is an active energy machine, identical to the Bosnian Pyramid of the Sun.

CHAPTER 13.

IMPORTANCE OF DOLOMITE WHITE CRYSTAL DISCOVERY ON BOSNIAN PYRAMID OF THE SUN

At the beginning of August 2018, I bought a parcel at the foot of the northern side of the Bosnian Pyramid of the Sun. In a few days we began cleaning the plot of shrubs and vegetation. The removal of the surface layer of soil and clay followed. In the part of the parcels where a few decades ago locals destroyed the parts of pyramid with dynamite, to have building material for the foundations of nearby houses, we found blocks of pyramids that glittered in the sunlight.

I brought volunteers who helped us clean up the property and showed them the crystals. It was the last day of the fifth shift of volunteers this season and I wanted to show them that their efforts to clean the plot were not futile. ‘Here’s evidence that the surface layer of the Bosnian Pyramid of the Sun was covered with crystal. Builders knew what kind of energy properties they needed,’ I talked to young volunteers.

They were glad they were doing that. They felt pioneers in discovering this part of the pyramid. We found crystals in more places on the north side of the pyramid. In the summer of 2012, we worked on the corner between the north and east side. Below the soil and clay, we found split pieces of crystal, the size of the hand. Concrete shone on all sides with the built-in small crystal pieces.

In October and November 2017, we opened the first sonda on our plot at the foot of the north side, which we properly named F-1 (first Foundation’s sonda). The cracks of the concrete showed pieces of crystal, and the whole surface glittered. We named this site as crystal concrete.

By mid-August 2018 we find crystals in blocks but at the nearby property. During the excavation tour I joined the Foundation geologist from England Richard Hoyle. I showed him crystal and he said:

‘Dolomite. It is not in situ. ‘

He was right. The Dolomite does not come just half a meter below the ground. It’s not very common for Bosnia, either. It can be found in central part near town of Konjic and southern Bosnia-Herzegovina (Trebinje, river Neretva valley).

Dolomite is, structurally, calcium magnesium carbonate. It belongs to the carbonate mineral class. It can be white, colorless, purple, gray, orange, green or brown. Minerals found in dolomite are calcite, fluorite, barite, quartz and sometimes gold.

In the dolomite we discovered on the Pyramid of the Sun, we find a white crystal. Crystal dolomites can be found also in the USA, Canada, Switzerland, Spain, and Mexico.

The geometry of the dolomite white crystal is hexagonal. Hexagon is the most powerful geometric form when it comes to energy. It consists of six equilateral triangles (pyramids) on 2-D flat. Looking at it three-dimensionally, it forms a combination of triangles, rectangles, squares, rhombs, and other geometric shapes. No accident, we have designed a number of installations in the park ‘Ravne 2’ and the Healing Forest in the shape of hexagon: Meditation stage, Summer House, Conference Hall, Hexagon megaliths, etc.

For crystallotherapy, the dolomitic white crystal has special values. If it is placed in the center of the room, it balances energy. It has healing properties, it improves blood circulation, enriches lungs and oxygen cells, helps with reproductive organ problems, relieves insomnia, heal the broken bones faster.

The white dolomite crystal has a positive influence on unblocking the chakras and balancing energy in the body. It especially helps in opening and activating the heart chakra. It thus brings love to life and removes sorrow. It is also good in abstract thinking; it develops creativity and allows for thinking beyond the mold and the programmed way of life we are exposed through the system’s eyelids.

Also, the gentle vibration of the white dolomite crystal enhances the experience of meditation. No wonder, therefore, that the Bosnian Pyramid of the Sun is an ideal place for relaxation and meditation.

Since we bought three plots on the east side of the Bosnian Pyramid of the Sun, in August 2018, I went through the thick forest between our new parcels and our old “Corner” probes. The block ends were damaged, cut.

Richard tells me at one point:

‘Well, you know that the edges of the Bent Pyramid in Egypt are cut off. He’s right. It appears that the crystals at the corners played an important role in the accumulation and flow of energy towards the top of the pyramid. That is why we find large quantities of crystals. Here we come to the most important functions of the oldest and largest pyramids: communication device.

Other functions, which we have proved in the case of the Bosnian pyramids, are also indicative: health and self-healing, vibration that improves the molecular structure of water and food, opening and balancing the chakras, calming and relaxation, developing spiritual senses, enhancing the aura.

We’re witnessing the inseparable connection between the Underground Labyrinth Ravne, the Bosnian Pyramid of the Sun and properties that Dolomitic white crystals bring with them.

If we had a time machine, we would probably be able to track the damage that the Bosnian Pyramid of the Sun has suffered for millennia: from devastating tidal waves from a distant past, an earthquakes on unimaginable scale, the advanced civilization that took pyramidion and devices under the pyramid, preventing it from working as it once did, to modern explosives in peace and bombs in the war time.

Still, biggest, and oldest pyramid in the World is still there with the wealth of knowledge ready to share with us.

73. DISCOVERY OF THE FIRST ARTEFACTS IN THE RAVNE TUNNELS 3

Another very important day in the “Archaeological Park: Bosnian Pyramid of the Sun” Foundation. Namely, on August 31, 2018, after entering the C-2 entrance, the Foundation’s eight-member team carried out a complete prospecting of the new tunnels above the ‘Ravne 2’ park. The team was led by the Foundation Director Semir Osmanagić, PhD, and Foundation field geologist, Richard Hoyle. Archaeologist Sue Jones, supervisor Marie-Sophie, three volunteers, and Stefan Gruschwitz joined them.

This was a 65 meters long journey into the unknown, and they were forced to crawl. At the end of the tunnel there was an intersection with two smaller passages, too narrow to continue the journey. The tunnels were filled with gravel, just like the Ravne tunnels.

During the prospecting of two pieces of ceramic material, parts of a round bowl were found as well as a rusty belt buckle. They were added to the metal rusted sickle (?) that was discovered the day before. On the same day they were discovered, the items were sent to the local museum for further processing. After that, an attempt will be made to determine the age of the items.

Stefan Gruschwitz measured the oxygen level in the new tunnels. The values were excellent and ranged from 20.7 to 21.3%. Also, the values of negative ions corresponded to the concentrations recorded in the Ravne tunnels. So, at the entrance to the new tunnels, the level of negative ions is 1,500 per cm³, while 65 m from the entrance they reach a level of 20,000 per cm³. These levels of negative ions have healing properties. Hard, but exciting work of volunteers at this location continues in September with a new group of volunteers.

Leader of the project, Osmanagić, gave a statement after the expedition, which can be viewed here:

74. VALUES OF OXYGEN AND NEGATIVE IONS IN THE RAVNE TUNNELS IN OCTOBER

Oxygen values and negative ion concentrations recorded in the Ravne Underground Labyrinth on October 1, 2018:

- Outside, in front of the entrance to the Ravne Tunnels: oxygen 20.7%, negative ions 700 cm³,
- Egg-shaped block in the tunnels: oxygen 20.2%, negative ions 34,000 cm³,
- Healing chamber: oxygen 20.0%, negative ions 53,000 cm³,
- K2 block: oxygen 19.9%, negative ions 32,000 cm³.

75. IMPROVEMENT OF THE THYROID FUNCTION AFTER A TWO-WEEK VISIT TO THE TUNNELS

Boris Boras came from Zagreb to Visoko with a suspected thyroid cancer and goitre diagnosis. Doctor's recommendation was a thyroid puncture. However, Boris first decided to visit Visoko, the Bosnian Valley of the Pyramids, and the prehistoric Ravne Underground Labyrinth.

He stayed in Visoko for a total of two weeks. He used to go to the tunnels twice a day, staying inside for an hour and a half - a total of three to four hours a day. Boris was also drinking one to two litres of water from the tunnels. Upon his return to Zagreb, he went for a check-up.

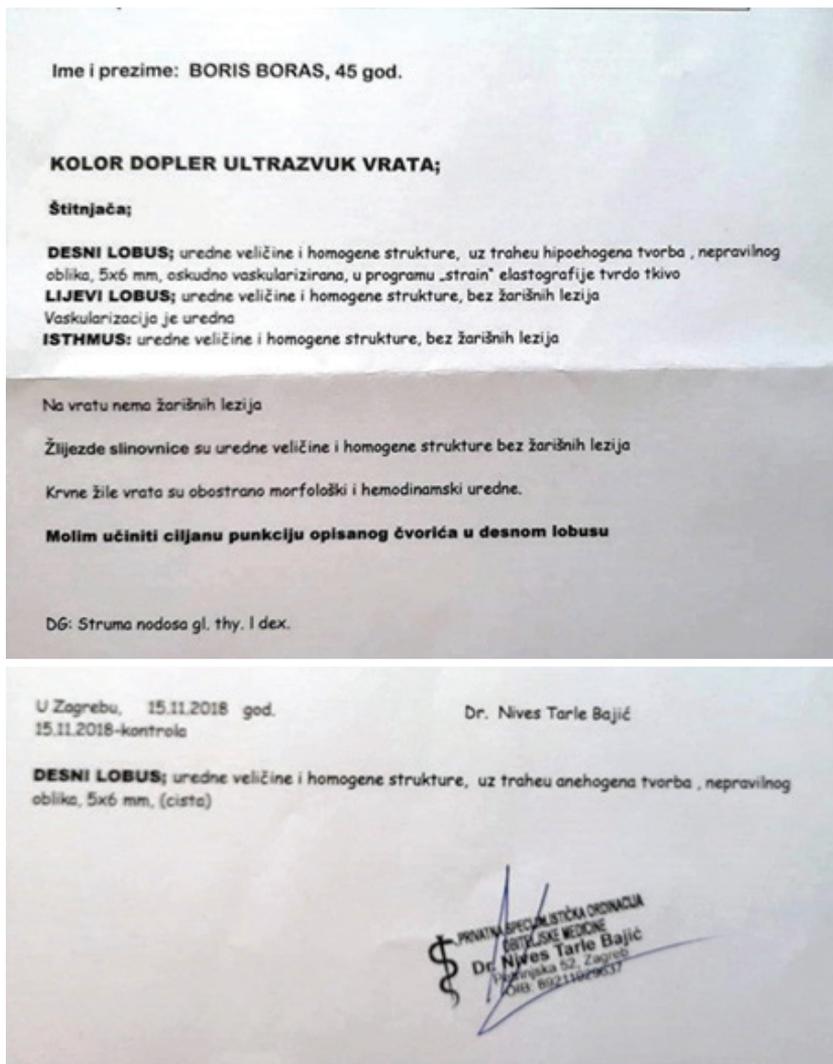

He described the results in an email:

- Hello, we went for a check-up and found out that the thyroid tumor disappeared. There is only a void in a tissue where the tumor used to be. Kind of a cyst remained, which is not dangerous and does not require any further treatment. It will heal over time. Only two weeks have

passed since the first medical finding dated 26 October 2022, according to which I have a goitre and need a thyroid puncture. The medical finding now shows a complete change in the thyroid, in both structure and position. Also, the 10 cm long thickening of the intestine, which I have been dealing with for a year, has disappeared.

Attached is a photo of the finding:

Translation of the medical finding:

Name: BORIS BORAS

Age: 45

COLOUR DOPPLER NECK ULTRASOUND.

Thyroid.

RIGHT LOBE; normal size and homogeneous structure, irregularly shaped hypoechoic mass near the trachea, 5x6 mm, sparsely vascularized, strain elastography platform hard tissue

LEFT LOBE; normal size and homogeneous structure, no focal lesions
Vascularization is normal.

ISTHMUS: normal size and homogeneous structure, no focal lesions

No focal lesion on the neck

Salivary glands have normal size and homogeneous structure, no focal lesions.

Normal neck blood vessels morphology and hemodynamics

It is necessary to perform a nodule targeting puncture in the right lobe.

Diagnosis: Struma nodosa gl. Thy. I dex.

In Zagreb, November 11 2018

Dr Nives Tarle Bajić

November 15 2018 - check-up

RIGHT LOBE; normal size and homogeneous structure, irregularly shaped anechoic mass near the trachea, 5x6 mm (cyst)

76. SUMMARY OF 2018 FROM THE PERSPECTIVE OF SEMIR OSMANAGIĆ

The Bosnian pyramids research project is ending its 13th season. I am proud to emphasise the fact that it has become the most active archaeological site in the world. This year, we had 300 volunteers who worked with us and participated in fascinating discoveries. I would particularly like to point out the information from a few days ago, which is perhaps the most important archaeological information of the season. Namely, in August 2018, the Foundation bought 5,000 m² of land near our “Ravne 2” Park. There we discovered underground tunnels. Just a few days ago, we got the results of the radiocarbon dating of the stalagmites we found in those tunnels. They are 26,200 years old! It means that these passages, which were completely unknown to the community of experts until now, originate in the distant past. When we add to the radiocarbon age the time needed for preparation of the basis for the stalagmite’s formation and time for the correction of the calibrated age, we get the date of about 32,000 years. This is precisely the age of the Bosnian Pyramid of the Sun and the Ravne Underground Tunnels. They make part of the same culture. The area of underground constructions in the Bosnian Valley of the Pyramids is huge, as tunnels, spaces, intersections, and underground lakes stretch for tens of kilometers. I have no doubt that the heart of Bosnia and Herzegovina was a meeting place of the oldest European civilisations.

This example shows our commitment to continuous and professional work. This year we also bought six plots at the foot of the Bosnian Pyramid of the Sun. Preliminary works show that the pyramid is significantly higher than the assumed 220 m (The Pyramid of Cheops is 147 meters high), because we found concrete blocks under layers of soil, which make the pyramid 290 meters high. So, it is definitely the tallest pyramid in the world! We also discovered large amounts of white crystal in those sections of the pyramid. Its role was to transform energies through the piezoelectric effect, from electromagnetism to ultrasound, and from sound to electricity.

We are pioneers in studying the purpose of the pyramids, rejecting the

fairy tales according to which the Egyptian pyramids were built by tens of thousands of slaves as tombs of the pharaohs, or the Latin American pyramids as altars. The largest, oldest, and most superior pyramids were energy machines that provided clean and free energy, very specific frequencies of electromagnetism, electric fields, orgone energy, ultrasound, negative ionization and Tesla scalar waves. These are all measurable phenomena, therefore scientifically provable. The function of these energies was to enable communication over long distances, improve human health, enable long life and immunity, and improve the molecular structure of water and food. The energies were also used to purify the air, improve the bioenergy envelope around the body (aura) as well as to develop spiritual senses that enabled the development of all mental potentials to the maximum. Everything we hold important in our life was brought by the energy of the pyramids. If archaeologists and Egyptologists don't understand us nowadays (because schools and colleges don't teach them about the real purpose of the pyramids), in 20 or 50 years they will follow in our footsteps. This is a project that will change history of the world, and it's coming from the heart of Bosnia and Herzegovina. Bosnia and Herzegovina is known as a country of war, violence, war criminals, corruption, poverty, and departure of young and educated people. So, it's known for bad reasons. However, we are changing that image, turning Bosnia and Herzegovina into a country of pyramids, research, volunteers, tourism, and positive energy.

Fifteen years ago, there were literally no tourists in Visoko. Thanks to our worldwide promotion, we attract tens of thousands of tourists from 160 countries every year. According to the booking.com website, there were 158 accommodation establishments in Visoko in 2018. Entrepreneurs, driven by the needs of tourists, build hotels, motels, apartments for rent, vacation homes, and camps. Tourists stay not just for a few hours, but for a week at a time. The foundation has developed several types of tourism: archaeological, medical, volunteer, and spiritual. In the past two years, we bought 55,000 m² of neglected land that was actually a swamp. We drained it, cleared the forest, planted grass, and made the most beautiful park in the south of Europe. The 'Ravne 2' Park has received a number of donations from around the world, which were used to create installations artworks such as megaliths with carved, artistic symbols and energy stone installations, or to make spiral botanical gardens, a stone spheres park, recreational paths, playgrounds, and build a concert

stage that is also used for meditation. In short, the Park has become an oasis of spiritual peace. That's where we started the 'team building' activities, along with the already existing meditation and yoga retreats, and educational excursions. We are also finishing the construction of a conference hall. It has a seating capacity of 200 people, and the first film screenings, concerts, lectures, seminars, and outdoor lessons for students have already been held. All our facilities are free for organised groups. At the same time, we are also finishing "Aero" spa with a wellness centre. We turned a neglected forest into unique landscaped area, full of peace and tranquility. We are introducing new standards and creating tourist attractions to attract and keep tourists from all over the world as long as possible, says Osmanagić.

We have had very active media promotion since the beginning of the project, when I was the only participant in the research. The media promotion became especially active after the establishment of the non-governmental, non-profit "Archaeological Park: Bosnian Pyramid of the Sun" Foundation. We brought the world's largest media to Visoko, such as CNN, ABC, CBS, BBC, 'Italia Uno', 'Rai Due', NTV from Moscow, ZDF, and many other regional and national television networks.

Our project is the only project from the Balkans about which documentaries were made for the History Channel, National Geographic, Discovery Channel, Science Channel, and other international television networks. Every year, our team films our new discoveries for our YouTube TV channel. We also send 2 million newsletters via e-mail. Furthermore, our social media (several websites and Facebook pages) publish daily news from Visoko for tens of thousands of our followers. Film directors from the USA, Germany, Canada, Switzerland, Croatia, Bosnia and Herzegovina and other countries make documentaries and feature films about Bosnian pyramids. Wherever I give lectures, in the USA, India, Vietnam, Slovenia, Germany, Norway or Bulgaria, people recognise me, and express respect for our struggle for scientific truth. I give 65 lectures each year in 45 cities and 20 countries around the world. What motivates me the most is when I see that people from Sedona, Amsterdam, Plovdiv, Brno or Brežica, who attended my lectures, now visit the tunnels and pyramids and enjoy the 'Ravne 2' Park.

The good intentions of the Foundation's team, which has 60 employees, several hundred volunteers and a great Board of Directors, was recognised by all levels of government. We have excellent relations with government institutions at the cantonal and municipal level, agreements on partnership cooperation, and all the necessary work permits. We have not asked for any financial assistance for a long time. We create new values on our own, and through tourism we help the local and wider community. Again, I am proud to point out that we have a partnership cooperation with the Municipality of Visoko and the local museum, with whom we have implemented a number of concrete projects to improve tourism. Besides that, the mayor of Visoko declared this year the year of tourism. We have excellent relations with the Government of Zenica-Doboj Canton and the Prime Minister. One of the results of that cooperation was their investment in tourist infrastructure, the construction of access roads and parking for tourists in the Ravne complex. The authorities at the level of the Federation of BiH also showed their interest by investing in the construction of the tourist road network. I expect that this cooperation will continue for the benefit of all.

The Foundation has once again had extremely successful year, and we increase that pace year after year.

Most of the several tens of thousands of visitors come during the tourist season, which is now extended from March to November. However, the arrival of visitors continues even during the winter. Regardless of whether people come out of curiosity or due to medicinal reasons, the Foundation takes tourism very seriously. Our 28 official guides are certainly the most professional in the Balkans, if not beyond. We are open seven days a week and at your service 365 days a year. Each year I am convinced that it was the best season, but I expect 2019 to be the most successful yet.

77. THE LEVEL OF RADIATION IN THE TUNNELS IS BELOW THE MINIMUM

The “Archaeological Park: Bosnian Pyramid of the Sun” Foundation has among its instruments the ‘GQ GMC-320 plus Geiger counter’ manufactured by GQ Electronics LLC, which measures the level of radiation in the environment. It is a new instrument, manufactured in 2018 and calibrated to measure values from 0-2000 CPM. CPM means ‘counts per minute’ (number of electrons that pass through a point over 1 minute).

In the past ten years, the Foundation experts have measured, on several occasions, radiation at our archaeological sites, but through collaborators, i.e., third parties. On two occasions, these were expert teams from the Faculty of Veterinary Medicine, University of Sarajevo, and several times the measurements were carried out by independent experts. Considering that radiation is an important energy parameter, the management of the Foundation estimated that it is necessary to continuously measure its levels. Since November 2018, the levels of radiation have been measured daily with the aforementioned device.

Another important scale measures radiation in millisievert (mSv) and microsieverts (μ Sv), which show the harmful effects of radiation on the human body. According to the standards of the United States Environmental Protection Agency (EPA), people should not be exposed to concentrations higher than 1 mSv per year (1 millisievert = 1,000 microsieverts). However, on average, people in cities are exposed to three times higher radiation level.

Extreme cases occurred after the accident at the nuclear power plant in Fukushima. At that moment, the level of radiation to which employees and people living near the nuclear plant were exposed reached 400 mSv per hour. For example, during CT imaging in hospitals, people receive a dose of 15 mSv. When x-raying the lungs, a person is exposed to 0.02 mSv, and when having dental X-rays, to 0.01 mSv.

Studies show that the exposure to 100 mSv a year is the starting point when correlations between cancer and radiation levels appear. The possibility of getting this disease after a long period would be 5% (five adults in 100 people). When the nuclear disaster happened in Chernobyl, the radiation level of 350 mSv was a standard to which the

Russian government was required to relocate population to other cities. The first measurements in November 2018 in the “Ravne” tunnels show that the radiation level was 0-60 CPM. Since 1mSv is converted into 30 CPM, it means that the radiation level in the “Ravne” tunnels is below the minimum, that is, three times lower than the radioactivity in certain cities.

In other words, from the aspect of the of natural radioactivity level, staying in the “Ravne” tunnels is safe.

78. WORKS ON THE “RAVNE 5” TUNNEL HAS STARTED

At the end of November 2018, the team of the “Archaeological Park: Bosnian Pyramid of the Sun” Foundation discovered the entrance to the underground tunnels 200 m away from the entrance to the Ravne Underground Labyrinth. The entrance to the new tunnels, which are called “Ravne 5”, is located on a plot owned by the Foundation. Bearing in mind that the entrance is at the same altitude as the existing “Ravne” underground tunnels, there is no doubt that they belong to the same network of tunnels.

As it is known, in August 2018, the “Ravne 3” tunnels were discovered, also on the Foundation’s plot. They are located 500 m away from the entrance to the Ravne Underground Labyrinth. Since they are also at the same altitude, this proves the hypothesis that dozens of kilometers long tunnels are hidden under the Bosnian Valley of Pyramids. Given that they are also at the same altitude, this proves the hypothesis that dozens of kilometers long tunnels are hidden under the Bosnian Valley of Pyramids.

The works on the “Ravne 5 tunnels started at the beginning of December 2018. After the soil at the entrance to the tunnels was removed, the next step was to remove gravel material identical to that used in closing the Ravne tunnel. The Foundation workers are slowly throwing out the gravel and preparing the substructure for the entrance, after which it will be secured with the entrance door.

During the winter, the Foundation workers will be more active than ever, and they will work at three locations in the Ravne tunnel complex.

79. RADIOACTIVITY AND GAS PERCENTAGE IN VISOKO, SARAJEVO AND RAVNA TUNNELS

As part of regular measurements of radioactivity and various gases, the team of the “Archaeological Park: Bosnian Pyramid of the Sun” Foundation prepared a comparison of levels at three locations: Sarajevo, Visoko, and the Ravne Underground Labyrinth.

OXYGEN

Oxygen levels in Sarajevo and Visoko are 20.9% and in the tunnels between 20-20.9%.

CARBON MONOXIDE (CO)

The levels of monoxide gas, which is poisonous, are 0% in Sarajevo, Visoko and Ravne tunnels.

HYDROGEN SULFIDE (H₂S)

The level of hydrogen sulfide, also poisonous gas, which is produced by breakdown of organic matter in the absence of oxygen, is 0% in Sarajevo, Visoko and Ravne tunnels.

NUCLEAR RADIATION (CPM)

Nuclear radiation in Visoko and Sarajevo reaches 17 counts per minute (CPM). In the Ravne tunnels, near the K-1 Block, it reaches 9 CPM, at the K-2 block 10 CPM, in the Healing Chamber 13 CPM and at the egg-shaped block 12 CPM. In other parts of the tunnel, the levels range from 6 to 16 CPM. All levels below 100 CPM are considered safe. Conclusion: the concentration of natural radioactivity in the tunnels is several times lower than the minimum allowed, and is lower than the average measured in Sarajevo and Visoko.

UV RADIATION INTENSITY (mW/cm²)

The level of harmful electromagnetic radiation in Visoko and Sarajevo is low, and it reaches 0.1 mW/cm². In Ravne tunnels that level is zero (0 mW/cm²). Usually, worrying levels range from 5 to 10 mW/cm².

ORGONE ENERGY

Orgone (life energy) level was measured with a device called Experimental Life Meter, manufactured in the USA. Orgone shows the ‘level of vitality’ or the ability to absorb harmful electromagnetic energy. The higher the level of life energy, the healthier the environment.

The levels are relative and are based on a comparison of different areas. For example, the orgone level is identical in Sarajevo and Visoko (8 units), but in the Ravne tunnels it is twice or three times higher (15-20 units) than in the city centre of Sarajevo or Visoko.

Note: Measurements were carried out in December, 2018. Location in Visoko: ‘Kulin Ban’ Primary School. Location in Sarajevo: housing estate called Breka. Locations in the Ravne tunnels: 14 locations from the entrance to the tunnels to the places where visitors usually stay, and to remote parts of the tunnel that are rarely visited.

Conclusion: all measured parameters indicate exceptional levels in the Ravne tunnels that create a very favorable framework for improvement of the health of visitors.

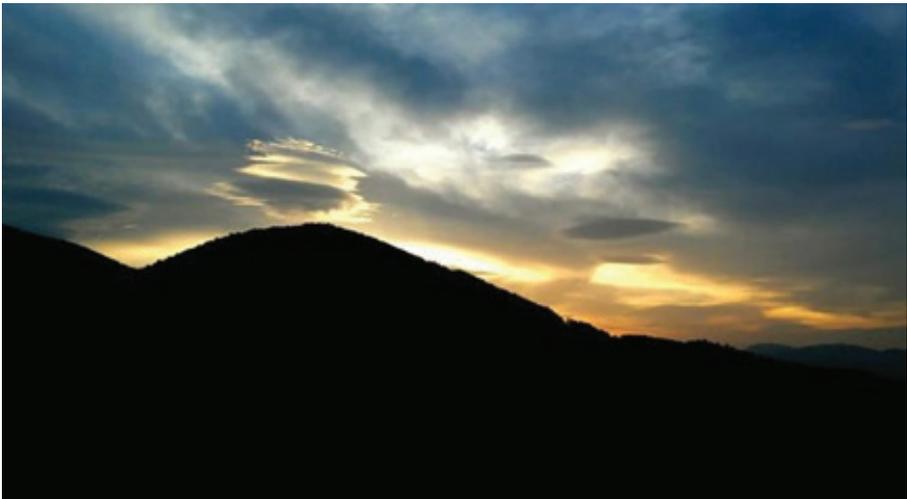

80. OVAL CLOUDS ABOVE THE PYRAMIDS, VOLCANOES AND MEGALITH SITES

Powerful energy sites have always attracted people's attention. These can be pyramids with their peaks, pointed hills, active volcanoes, or stone circles with focused energy.

Meteorologists speak of the 'lenticular clouds' phenomenon, i.e., static clouds that form in the troposphere, above mountains, and buildings, due to specific wind movements.

UFO (unidentified flying object) researchers believe that oval clouds are actually hiding aircrafts and advanced technology from the public eye.

Such oval clouds can often be seen above the Bosnian Pyramid of the Sun. Senior guide of the Foundation, Haris Delibašić, is the author of one such photo. It goes alongside similar photos around the world.

81. FROM THE SCHUMAN RESONANCE TO 28 KHZ

Written by: Anton Kulka, graduate mechanical engineer.

I would like to share my hypothesis of the phenomenon and the connection with the Bosnian pyramids. This letter was inspired by the interview given by Semir Osmanagić to the Slovak magazine “Zem&Vek” in February 2019.

I have previously visited the Ravne tunnels and attended Osmanagić’s lecture in Košice, so I have information about the project at my disposal. Some time ago, I accidentally entered the Schumann resonance frequency of 7.83 Hz into the calculator, and I was calculating with the function $n!$ Although this math function is used in integrals, the calculator showed 28068.50 Hz as a result of the calculation!

After reading the interview in the magazine, and recalling the words of the guide in the Ravne labyrinth, I came up with the following hypothesis:

- at the base of the pyramid is the Schumann resonance of 7.83 Hz,
- the energy beam of 28 kHz was measured at the top of the Bosnian Pyramid of the Sun.

Does the Pyramid work as a Schumann resonance amplifier? If so, is it because of the shape of the Pyramid?

The frequency of 28 kHz uses certain materials, for example, quartz crystal, as well as the piezoelectric effect that generates ultrasound. It spreads through the Ravne tunnels by water. The water in the tunnels is driven by negative electricity through the negative oxidation-reduction potential (ORP). Is that true?

82. THE FIRST BIOENERGY TEST ON THE BOSNIAN PYRAMID OF THE SUN AND TUMULUS IN VRATNICA

In May 2019, Jiří Matějka, associate of the “Archaeological Park: Bosnian Pyramid of the Sun” Foundation and publisher of the Czech WM magazine, performed the first bioenergy assessment on the Bosnian Pyramid of the Sun and on top of the tumulus in Vratnica. Twenty-two volunteers participated in the test, which determined that the Bosnian Pyramid of the Sun and the tumulus in Vratnica have a positive effect on human life energy.

Jiri Matějka, Paul LaViolette, PhD, Semir Osmanagić, PhD, Tomáš Matějka,
May 2019

What is bioenergy?

Our bodies are a reservoir of bioenergy known as chi, life energy, or-gone energy, free energy, ethereal energy... However, it is human, life energy. If your bioenergy level is decreased, that can cause internal dis-comfort and illness.

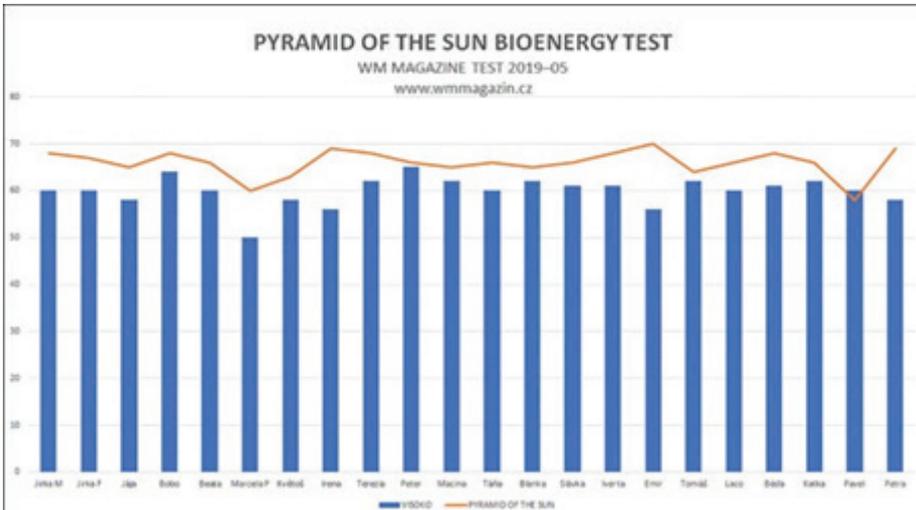

For the first professional measurement, Matějka used a professional de-vice designed by the physicist Willhelm Reich (1947). The instrument responds to living things and can measure their percentage of bioenergy,

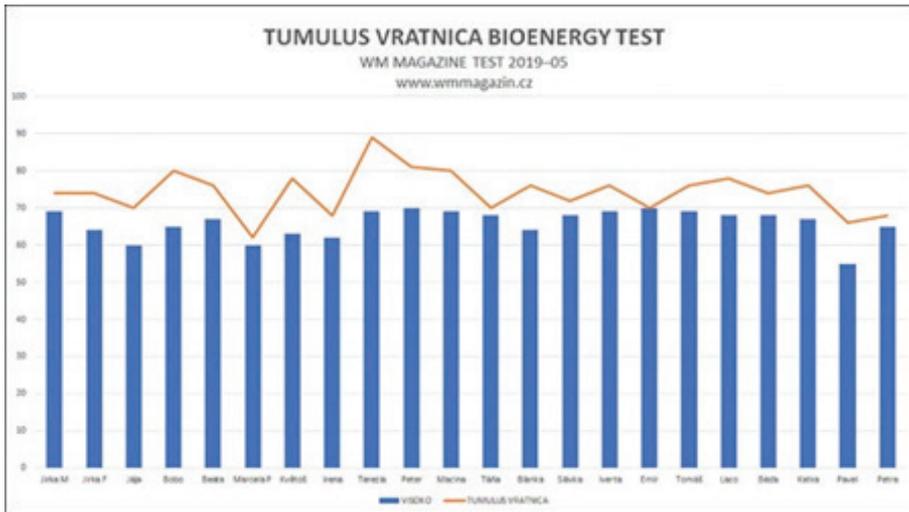

as well as of plants, water, food, minerals, space, etc. Also, it can reliably measure the current status of bioenergy, giving visible and understandable results.

Pyramids and megalith sites around our planet emit positive energy. The pyramids were built by ancient civilisations in line with a universal plan. People used the energy of pyramids and religious buildings to improve their health and knowledge. The pyramid and tumuli energy was free for everyone. Hundreds of pyramids have been discovered on our planet while others are waiting to be discovered. The most famous are the pyramids in Giza, Egypt, built several thousand years ago. Lesser-known pyramids can be found in Sudan, China or Northern Italy. In 2005, Semir Osmanagić discovered the first pyramids in Europe, which are 29,000 years old.

A team from the Czech Republic measured the value of life energy in the city of Visoko, then on top of the Bosnian Pyramid of the Sun, and on top of the tumulus in Vratnica. The life energy of the volunteers who participated in the test increased by 15-20% on the Pyramid and the tumulus, as shown in the graphs.

The graphs show different values of life energy. The energy of the pyramids will increase the life energy in a healthy person. If you have a health problem (and you don't know about it at all), the increase in the value of life energy is reduced. Positive impulse of the pyramid causes a curative reaction in patients, which is manifested by quick detoxification of the organism. Your immune system starts working at 100% again.

83. SLOVAK JULIUS ČINGER CLAIMS THAT HE WAS CURED OF LUNG CANCER THANKS TO HIS STAY IN THE RAVNE TUNNELS

Quite a few testimonies about the healing properties of the Prehistoric Ravne Tunnel Complex and the water from the tunnel have been recorded in the past few years. The latest one comes from Slovakia. It is Julius Činger's testimony, who arrived in Visoko this weekend, but this time with great news.

Namely, Julius used to suffer from lung cancer, as attested to by the medical findings of the Oncology Department of the University Hospital in Bratislava. Furthermore, due to the spread of the cancer, he also had many other health problems related to this serious disease. Lung cancer was recorded in the medical findings from February this year, and according to the latest one from May 27, which he had brought with him, the cancer was gone!

- I'm Julius Činger from Slovakia. I'm 51, and I suffered from lung cancer. I've heard about this place (Ravne Complex), so I came here and stayed for four days. I entered the tunnels and drank the healing water from the tunnels. After I had done new tests in May, about fifteen days ago, it turned out that the tumor disappeared. I am a proof, a living proof, of the healing power of these tunnels, said Julius who arrived in Visoko with new medical findings and yet another confirmation of the exceptional properties of the Prehistoric Ravne Tunnel Complex.

84. RAVNE 4 - DISCOVERY OF NEW UNDERGROUND PREHISTORIC TUNNELS

On November 4, 2019, a big new discovery was made in the Bosnian Valley of the Pyramids.

In the past 14 years, workers from the “Archaeological Park: Bosnian Pyramid of the Sun” Foundation found entrances to the ‘KTK tunnels’ and cleared out 150 m of the tunnels and the entrance to the Ravne tunnels. So far 2,400 m of the tunnels have been cleared out and secured, the ‘Ravne 2’ tunnels, 30 m of which are open, the Healing tunnels (renamed the ‘Ravne 5’ Tunnels - 65 m) and the ‘Ravne 3’ tunnels (110 m in total).

While working in the ‘Ravne 2’ park, Foundation workers discovered a small hollow area under the conglomerate rock. Director of the Foundation, Semir Osmanagić, Phd, formed a team for the first scientific prospecting, consisting of field archaeologist, Amna Agić, field geologist, Richard Hoyle, worker supervisor, Mustafa Bajić, volunteer supervisor, Marie-Sophie Gristi, and operator of instruments for energy phenomena measurement, Evelina Čehajić.

Control measurements were carried out before entering the hollow area. The team then squeezed through a narrow passage 30 cm high at exactly 9:15 a.m. The journey through the prehistoric tunnels took a full two hours. The measurements were carried out at two other points in the tunnels (22 m and 60 m from the entrance). Energy parameters are extraordinary. Conditions for stay are safe.

During the prospecting, the team noticed a large number of dry walls and artificially created tunnels extending in all directions. The average height of the tunnel was 80-100 cm.

The new ‘Ravne 4’ tunnels are located 300 m south of the ‘Ravne 3’ tunnel and are that much closer to the Bosnian Pyramid of the Sun.

Undoubtedly, it is the same tunnel network that stretches under the entire Bosnian Valley of the Pyramids. The team made the first documentary about the discovery and prospecting of the tunnel including statements of the participants.

Excellent energy characteristics, happy team, and exciting times.

85. 'RAVNE 3' TUNNELS - PHOTOGRAPHY MASTERPIECES BY HARIS

Haris Delibašić, senior guide of the “Archaeological Park: Bosnian Pyramid of the Sun” Foundation, and still an enthusiast and a huge fan of the Bosnian pyramids project, grew up alongside this project. He shared his knowledge and good energy with numerous tourists who had been visiting the pyramids and tunnels.

Over the last few years, he has specialised in photography, paying special attention to details, light and atmosphere.

This time we are attaching a photo gallery he made in different sections of the prehistoric underground tunnels ‘Ravne 3’ in Visoko.

86. ELEVEN GEOMETRIC, MATHEMATICAL, ASTRONOMICAL AND TOPOGRAPHIC PROOFS OF THE EXISTENCE OF THE BOSNIAN PYRAMIDS

The oldest superior pyramid complexes in the world are very sophisticated structures that cannot be explained without understanding their archaeoastronomical, geometrical, mathematical, and geodetic features. Egyptologists and archaeologists are still spinning in circles of irrelevant discoveries of primitive tools, ceramic objects and mummies that were made thousands of years after the construction of the pyramids in Egypt: on the Giza plateau (the so-called pyramids of Khufu, Khafre, Menkaure and other smaller pyramids), Dahshur pyramids (the Red Pyramid, Bent Pyramid, and Black Pyramid), the Meidum pyramids, Saqqara pyramids, and Hawara pyramids. A similar situation is found in the Chinese pyramids in Shaanxi Province, Koh Ker Pyramid in Cambodia, Pyramid of the Sun in the city of Teotihuacan, Mexico, Tikal Pyramid in Guatemala, Cahokia Heights in Illinois, United States, etc. The research of the Bosnian Valley of the Pyramid can set an example for all of them. These eleven pieces of evidence indicate the importance of archaeoastronomy, topography/geodesy and the mathematical-geometric approach.

1. At the beginning of the excavation in April 2006, the Urban Planning and Land Registry Department of the Municipality of Visoko declared that the distance between the tops of the Bosnian Pyramid of the Sun, Bosnian Pyramid of the Moon and Bosnian Dragon Pyramid was identical. It was 2,170 m. In other words, these three pyramids form an equilateral triangle with 60 degree angles. There are endless combinations of triangles in nature or geometry, but only the equilateral triangle has three sides of equal length and three equal interior angles. The ancient builders considered the equilateral triangle a perfect geometric shape and as such an element of the so-called Sacred geometry.
2. The Foundation associate, Saša Nađfeji from Belgrade, discovered in 2019 that the following structures lie on a straight line: (the Pyramid of the Bosnian Dragon, Bosnian Pyramid of Love, Bosnian Pyramid of the Sun, unnamed structure, entrance to Ravne tunnels, and entrance to Ravne 3 tunnels).

3. Capstones of the Bosnian Pyramid of Love, the triangular western sides of the Temple of Mother Earth, and the river Fojnica/entrance to the tunnels from the city, form another equilateral triangle.
4. The Foundation field geologist, Richard Hoyle from Great Britain, discovered at the end of 2019 that capstones of the Bosnian Pyramid of the Sun, Bosnian Pyramid of Love, and the tops of the Četnica and Krtnica hills lie on the line of the golden ratio (section). The golden ratio is also an element of Sacred geometry and was used to build the pyramids in Giza.
5. The next element of Sacred geometry is the Flower of Life (the Seed of Life). In 2020, Richard Hoyle showed that this cosmic formula of life is valid for the Bosnian Pyramid of the Sun, Bosnian Pyramid of Love, Krtnica and Četnica hills, with the centre at the top of the Bosnian Pyramid of the Sun.
6. Back in 2006, it was proven that the golden ratio also applies to the main pyramids (Sun, Moon, Dragon, Love) and the Temple of Mother Earth.
7. Croatian researcher Igor Šipić, PhD, proved that, seen from Earth, the main seven stars (“the Seven Sisters”) in an open star cluster called the Pleiades, are placed within the golden ratio. He drew a parallel with the Bosnian Valley of the Pyramids and determined that these structures match with the five stars of the Pleiades. It is noteworthy that stories about the stars of the Pleiades exist in oral traditions in India, the USA, Mexico, Egypt, and other ancient locations.
8. Following the movement of the shadow of the Bosnian Pyramid of the Sun, it was determined that on the day of the summer solstice (June 21) it forms a ‘pyramid’ by the western side of the Bosnian Pyramid of the Moon. The top of that “shaded” pyramid has the same height as the top of the Bosnian Pyramid of the Moon when seen from the top of the Bosnian Pyramid of the Sun. The two pyramids “touch” at their bases.
9. In midsummer, the shadow of the Bosnian Pyramid of the Sun completely covers the western side of the Bosnian Pyramid of the Moon, and the top of the shadow touches the capstone of the pyramid (It’s ingenious!).

10. During the autumnal equinox (September 21, 2019), the shadow of the Bosnian Pyramid of Love at sunset covers the western side and the capstone of the Bosnian Pyramid of the Moon.
11. In June 2006, the BiH Geodetic Institute released a statement claiming that the northern side of the Bosnian Pyramid of the Sun faces the true north, in other words, the North Star. That means this orientation is perfect, with a negligible deviation of 0 degrees, 0 minutes, and 12 seconds. In order to make the calculation, researchers from the Institute used the military topographic map TK 25 and the instrument called Total Station TS 600-Topcon, and conducted field research twice (November 2005, March 2006). The sides of the Bosnian pyramids of the Sun, the Moon, and the Dragon are accurately aligned with the cardinal directions (east-west, north-south). The deviations are smaller than with the Egyptian or Chinese pyramids. The edges of the Bosnian pyramid of Love are oriented to the cardinal directions (similar to the pyramid in Monte Alban, Mexico).

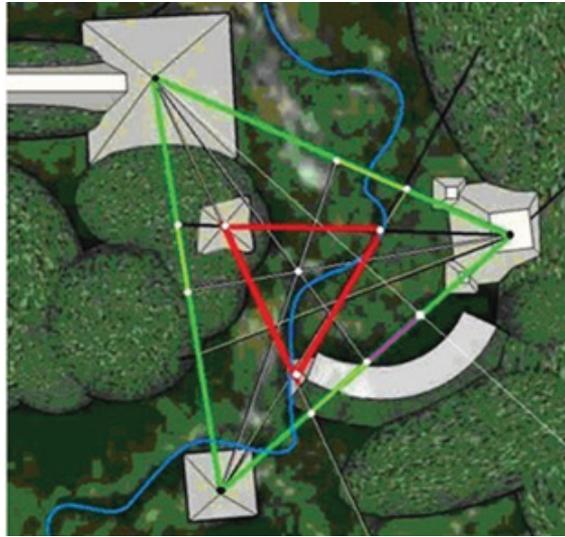

The Bosnian pyramid complex is a result of intelligent design. Ancient builders manipulated millions of tons of materials and placed structures in mathematically and geometrically very precise relationships. Sacred geometry served them to achieve the basic purpose of the pyramids as energy machines. New generations of researchers of pyramids and megalith sites will have to adopt a multidisciplinary scientific methodology to understand the monuments they are investigating.

Bosnian Valley of the Pyramids

Tops of three pyramids (the Pyramid of the Sun, Pyramid of the Moon, and Pyramid of the Dragon) form an equilateral triangle.

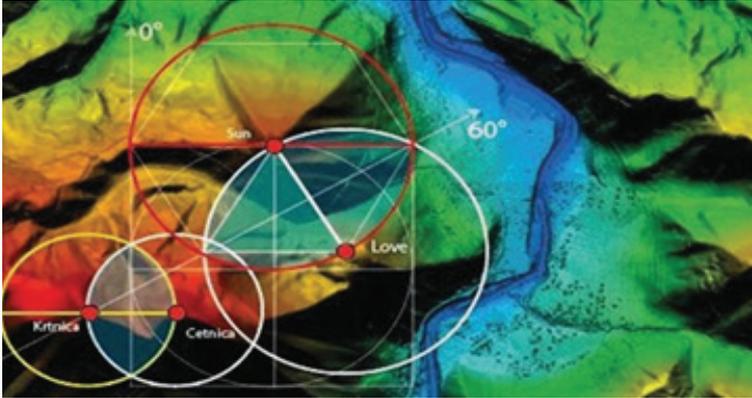

Within the first, there is another equilateral triangle (Love, Earth, Fojnica).
Triangle within a triangle = Sacred geometry.

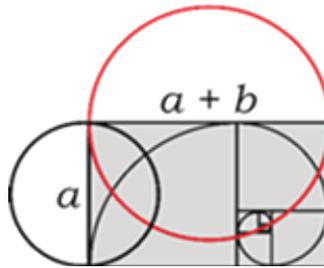

Straight line:
Temple of
Mother Earth,
Love Pyramid,
Bosnian Pyramid
of the Sun,
Underground
tunnel complex
Ravne

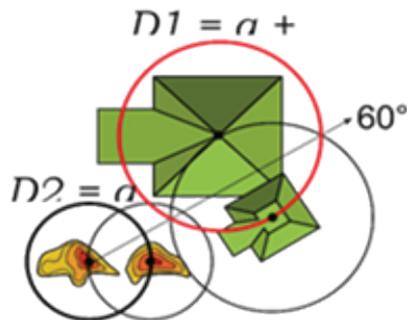

Straight line: Earth, Love, Sun, unnamed structure,
Ravne, Ravne 3

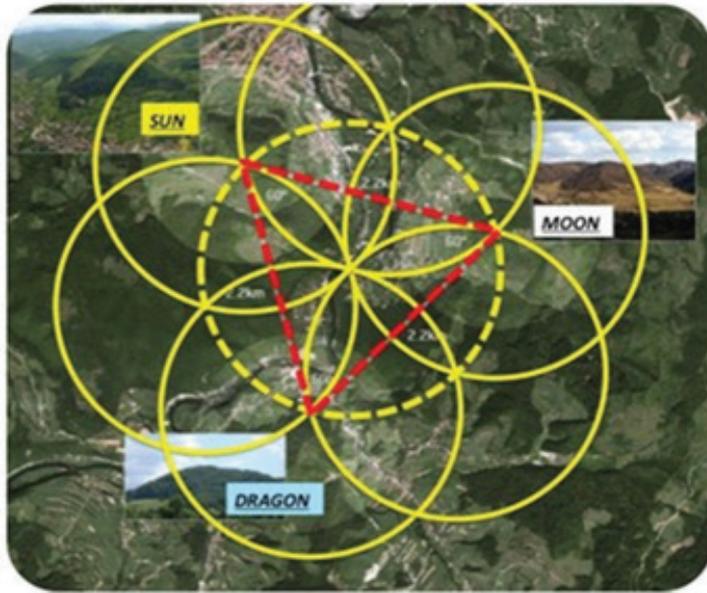

Golden ratio: Sun, Love, Krtnica, Četnica

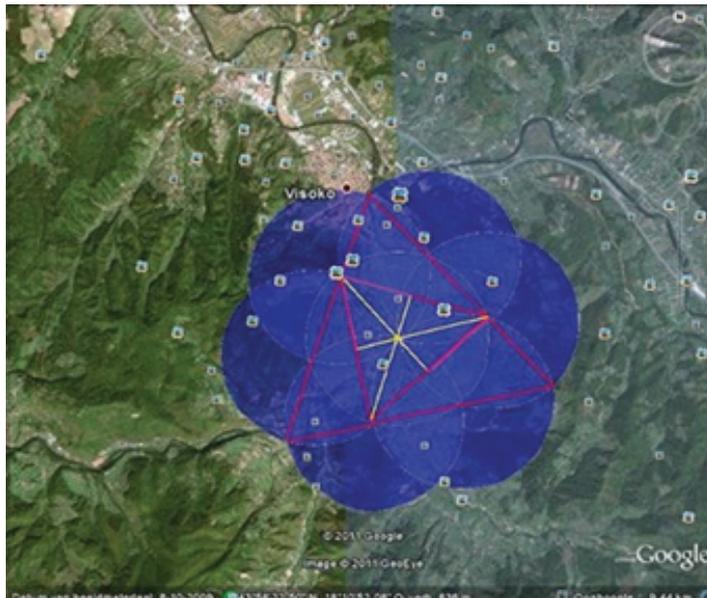

Golden ratio

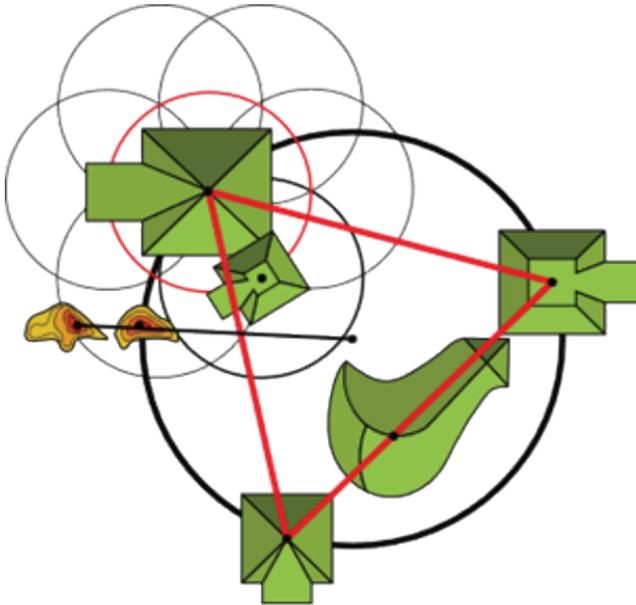

Golden ratio: Sun, Love, Krtnica, and Četnica

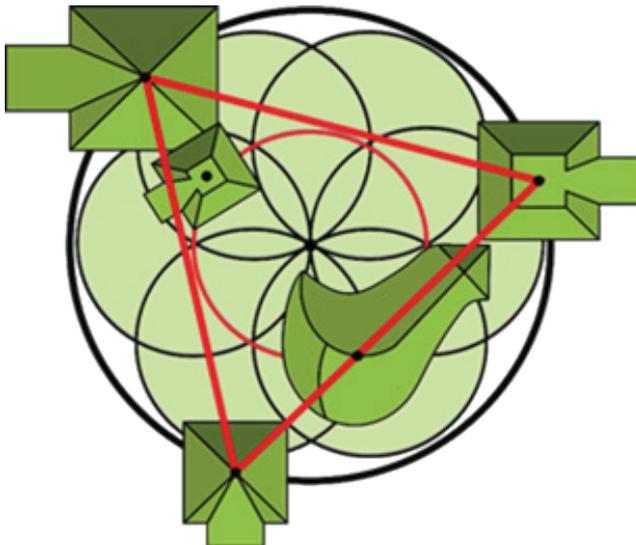

Flower of Life (Seed of Life): Sun, Moon, Dragon

Flower of Life (Seed of Life): Sun, Moon, Dragon

Seed of Life: Sun, Love, Krtnica, Četnica

Seed of Life and the equilateral triangle
(Sun, Moon, Dragon, Love, Earth)

The Golden Ratio: The Pleiades star cluster and Bosnian pyramids

In the afternoon of September 21, 2019, the shadow of the Bosnian Pyramid of Love reached half of the western side of the Bosnian Pyramid of the Moon (on the left) and completely covered the western side of the Bosnian Pyramid of the Moon at sunset (on the right)

Shadow of the Bosnian Pyramid of the Sun moves towards the western side of the Bosnian Pyramid of the Moon in the August afternoon, midsummer, (on the left), while at sunset it completely covers the western side of the Bosnian Pyramid of the Moon, and the top of the shadow touches the capstone of the pyramid.

At sunset, on the summer solstice, June 21, the shadow of the Bosnian Pyramid of the Sun forms a 'shaded' pyramid to the right of the western side of the Bosnian Pyramid of the Moon. All astronomical phenomena have always been observed from the same point: from the capstone of the Bosnian Pyramid of the Sun, which therefore also served as an astronomical observatory.

Northern side of the Bosnian Pyramid of the Sun has the most precise orientation towards real north with a deviation of 0 degrees, 0 minutes and 12 seconds.

87. WHY VIRUSES DON'T LIKE PREHISTORIC RAVNE TUNNELS IN VISOKO?

The most talked microorganism today is a virus. These tiny creatures, existing between the two worlds, organic and inorganic, are only visible under an electron microscope and are much smaller than bacteria. They are composed of genetic material (DNA/RNA) and a protein coat. For example, the coronavirus has a crown-shaped envelope and hence its name. Viruses occupy only living cells and use their chemical machinery to reproduce and thereby cause disease in plants, animals, and humans.

Negative ions neutralize microorganisms: viruses, bacteria, and fungi.

Negative ions are negatively charged molecules that bind to and break down microorganisms. The more negative ions, the more favorable atmospheric environment for people, animals, and plants.

The “Archaeological Park: Bosnian Pyramid of the Sun” Foundation carries out regular measurements of the negative ions concentration at different locations. Average negative ion concentration per cm³:

- Flats and offices: 25-100 pcs/cm³,
- Cities: 100-200 pcs/cm³,
- Villages: 100-300 pcs/cm³,
- Mountains (Igman, Bjelašnica): 750-1,000 pcs/cm³,
- A little house in front of the entrance to the Ravne Underground Labyrinth: 150-500 pcs/cm³,
- Inside the Ravne Underground Labyrinth: 5,000 - 40,000 pcs/cm³.

During the winter months, the negative ions concentration is somewhat lower, up to a maximum of 40,000 pcs/cm³, while in summer it reaches 60,000 pcs/cm³! These values are a few dozen times higher than in the healthiest pine forests on Mount Igman.

I have measured the concentration on the lakes (the highest one is on Lake Cerknica in Slovenia - 5,000 pcs/cm³), beside rivers (usually 1,000-2,500 pcs/cm³), in forests and on mountains (500-2,500 pcs/cm³), on megalith and pyramid sites (250-2,500 pcs/cm³). However, the tunnels under the Bosnian pyramids are a miracle and ahead of other locations worldwide.

Besides famous Ravne tunnels, the Foundation is currently working on

four other separate entrances that are several hundred meters apart: the 'Ravne 2', 'Ravne 3', and 'Ravne 4' tunnels and the Healing tunnels. Negative values range from 1,500 to 10,000 pcs/cm³. The newly-built 'Green Crystal Pyramid' in the 'Archaeological and Tourist Park Ravne 2' also has high values that range from 1,000 to 10,000 pcs/cm³. Since the tunnels are a part of a larger pyramid complex, it is not the only measurable, scientifically proven energy phenomenon.

Very low frequency of 7.83 Hz, known in science as the Schumann

Resonance is measured on the pyramids and in tunnels. This was the natural vibration of our planet, which since the 1990s has been disturbed by intensive development of technology (TV, microwave ovens, telecommunications devices, satellite and mobile antennas, power distribution network, etc.). The values in most locations in the world range from 10 to 16 Hz, which means that we no longer live with Earth's natural frequency. Thus, staying in the Ravne tunnels is a return to natural balance for human cells. 'We are coming back home', this is how many visitors describe how they felt when they were in the tunnels. Also, we measure an ultrasound frequency of 28 kHz, which is the frequency of levitation. Although the excessive mass of our body does not allow us to levitate in tunnels, most people feel 'light'. Our cells respond to the frequency of levitation.

Furthermore, favorable electromagnetic frequencies, high level of life (orgone) energy, absence of harmful cosmic radiation, negligible level of underground radioactivity, absence of geopathogenic radiation, etc., created an ideal environment for the regeneration and self-healing process.

Modern medicine will need several more years to understand and recognize these energy phenomena and their positive effects on human health. The Foundation is a pioneer undertaking on a global scale.

However, what I can already accept today are the positive effects of negative ions on humans. Clinical studies have proven that negative ions eliminate/destroy harmful microorganisms.

Among the positive effects of negative ions are the following:

- sore throat, bronchial cough, and nausea relief,
- sinus infection and congestion relief,
- allergy relief,

- migraine relief,
- reduction of asthma attacks,
- energy boost,
- relief from arthritis pain,
- blood pressure control,
- better breathing,
- cholesterol regulation,
- inflammation reduction,
- they help with insomnia, relaxation, and meditation,
- quick recovery from injuries and surgeries,
- immunity boost,
- pH regulation,
- they help body to cleans blood and lymph,
- they neutralize viruses, bacteria, fungi,
- they improve liver, kidney, and lung function,
- they improve body detoxification,
- they improve repair of damaged cells,
- they help with depression and memory loss,
- they improve concentration,
- they improve healing of wounds and corns.

We have noticed that a small percentage of visitors do not experience an improvement in their health, mental and energy parameters. Here is what happens with them: repulsion for the project (they frown when they enter the tunnels, don't listen to the guides, treat everything they see with contempt), and the result is that they come out of the tunnel even more negative. The energy of the pyramids amplifies what we carry with us. Wearing toxic clothing (polyester, etc.) also has a negative impact on the results.

So, it is up to us.

The builders of the Bosnian pyramid and the underground tunnel complexes were wise. They created an energy machine whose purpose is a communication device, regeneration, and health protection, and to improve the molecular structure of water and food and the "bioenergy envelope" (aura), balance and expand the chakra energy, boost immunity, improve the Earth's atmosphere, and maintain its electromagnetic stability.

We found five long (17-200 m) open sections with water in the Ravne tunnels. It is not water that is of surface origin but has been there for thousands of years. The water is crystal clear, clean, and healthy. There are no microorganisms. This is due to negative ions that serve as a

barrier to viruses, bacteria and fungi.

Now we know why viruses don't like the Ravne tunnels.

88. THE RAVNE TUNNELS ARE 50 TIMES HEALTHIER THAN STAYING IN BJELAŠNICA MOUNTAIN

A member of the expert team of the “Archaeological Park: Bosnian Pyramid of the Sun” Foundation, Evelina Čehajić, carried out a series of energy phenomena measurements during the summer weekend of June 27-29, 2020. She did this on the mountains of Igman and Bjelašnica, in the cities of Sarajevo and Visoko, and in four prehistoric underground tunnels in the Ravne complex in Visoko, BiH.

The results are much more in favour of prehistoric power machines. The most important factor of measurement that directly affects human health is the concentration of negative ions and their excess in relation to (unhealthy) positive ions.

The values were measured with two instruments ‘Air Ion Counter’ manufactured by Alpha Lab Inc., in the USA, which can be purchased at retail for \$530. All values above 1,000 negative ions per cm³ are good and have beneficial effects on human health.

The complete results of the measurements are shown in the attached tables. Average values by location are as follows:

- Sarajevo, Municipality of Novi Grad, 400 pcs/cm³, 600 positive ion/cm³ (excess positive ions),
- Town of Visoko, 550 pcs/cm³, 700 positive ion/cm³ (excess positive ions),
- Bjelašnica mountain, 850 pcs/cm³, 1200 positive ion/cm³ (surprisingly low level of negative ions at the top of Bjelašnica, at the last station of the cable car (see photo), higher concentration of positive ions),
- Igman mountain, 800 pcs/cm³, 850 positive ion/cm³ (lower values than expected in the forest on Igman, excess harmful positive ions),
- ‘Ravne 5’ Tunnels, 4,000 pcs/cm³, 3,000 positive ion/cm³ (highest values 5,500 pcs/cm³),

- ‘Ravne 3 Tunnels’, 22,000 pcs/cm³, 15,000 positive ion/cm³ (highest values 23,000 pcs/cm³),
- ‘Ravne 4 Tunnels’, 5,000 pcs/cm³, 3,000 positive ion/cm³ (highest values 10,000 pcs/cm³),
- Ravne Tunnels, 40,000 pcs/cm³, 35,000 positive ion/cm³ (highest values 55,000 pcs/cm³ in Meenal Mehta tunnels, and 52,000 pcs/cm³ around ceramic block K-5)

Experience in measurement shows that the concentrations of negative ions are a bit lower during the winter period, and higher in the summer. In the case of Ravne complex, the difference is around 30%.

In cities, the values of negative ions are also higher in summer (400-550 pcs/cm³) than in winter (150-250 pcs/cm³). However, the bad thing is that there are more positive ions in the air, which prevents the effect of negative ions.

The most disappointing values are recorded on the Olympic mountains Bjelašnica and Igman, which have always been synonymous with healthy and refreshing mountain air. In winter, the values of negative ions are 5-6 times higher than in cities, which is obvious to everyone. However, these values do not increase in summer. They remain below 1,000 pcs/cm³, and it can be safely said that staying on these two mountains does not have the healing effect it once had.

Osmanagić’s research and measurements carried out around the world showed concentrations of negative ions in numerous mountain and megalith sites that range from 1,500 to 2,500 pcs/cm³. The highest concentration of negative ions was at Lake Cerknica, in Slovenia, where it reached 5,000 pcs/cm³, which is a therapeutic level.

This time too, fantastic results were recorded in all Ravne tunnels, including the Healing tunnels, which are not open to the public, and in which the concentration of negative ions reaches 5,500 pcs/cm³. “Ravne 3” tunnels, where numerous artefacts were found during excavations in 2018-2019, have negative ion values up to 23,000 pcs/cm³. In the newly discovered ‘Ravne 4’ tunnels, negative ion values reach 10,000 pcs/cm³. Guests of the ‘Ravne 2’ park are offered an archaeological tour that includes a visit to the ‘Ravne 3’ and ‘Ravne 4’ tunnels, the ‘Orgone Chamber’, and the ‘Green Crystal Pyramid’, where they also get healing therapy, in addition to scientific and archaeological “therapy”.

Especially interesting story revolves around the longest and most spectacular Ravne tunnels. In some parts of the park, where the ‘Meditation Route’, the Meenal Mehta tunnels and the ‘K-5 Chamber’ were opened this year, the values of negative ions reach an incredible 55,000 pcs/cm³. Therefore, it is not surprising that there are numerous testimonials about their medicinal properties that appeared during 2020. Conclusion: being deep in the tunnels of Ravne is 50 times healthier than going to Bjelašnica.

89. PROF. DR MED. SCI. SAJMA DAUTOVIĆ: 'I FELT THE ENERGY OF THE PYRAMIDS ON MYSELF'

Prominent doctor, infectious disease specialist, prof. Sajma Krkić-Dautović, Dr. Med. Sci. from Sarajevo, visited the Ravne Complex on August 8, 2020. She decided to launch a pilot project with her patients who have Lyme disease.

In a statement about her experience, she pointed out the following:
'I have been keeping track of this project since 2006 and have believed in your work since the beginning. I first visited the pyramids in 2019. Before that I was sick, I had asthmatic bronchitis, sore throat, pneumonia, and severe allergies. After my first visit to the tunnels in July 2019, I felt the pyramid's energy. Three additional visits to the Ravne tunnels in the fall of 2019 led to the fact that the following winter, for the first time, I did not have any problems. I don't cough, I don't have allergies, pneumonia, I don't use inhalers. This is a major project; I want you to continue in spite of all difficulties you've had.'

90. THE RAVNE 3 TUNNEL ARTEFACTS

Written by: Field archaeologist of the Foundation, Amna Agić, MSc

Ravne 3 tunnels

Volunteers

Volunteers from the “Archaeological Park: Bosnian Pyramid of the Sun” Foundation discovered the Ravne 3 tunnels in August 2018 during the volunteer season. After discovering and entering the Ravne 3 tunnels, the volunteers discovered several different artefacts. Some of them were metal objects, 12 of them to be exact, then a 28-cm-long bank blade, an iron buckle, and 34 ceramic fragments. During the archaeological research in the Ravne 3 tunnels in 2019, volunteers from all over the world made their contribution.

A few different groups took turns over a period of several months. Preliminary archaeological research of the Ravne 3 tunnel led us to amazing discoveries. We discovered several different cultural layers, which is of the utmost importance for us as well as for the development of the archaeology of the Visoko region. In cultural layers, in several different probes, we found a number of different artefacts. Cultural layers in our probes were filled with traces of anthropogenic activity inside the Ravne 3 tunnel.

According to field archaeologist, Amna Agić, in Ravne 3 tunnels mostly there are ceramic fragments. A total of 3,132 fragments of ceramics belong to different time periods, starting from the Neolithic period (New Stone Age), the Roman era, down to the Middle Ages. Based on the number of fragments found, we came to the conclusion that we found at least six different types of vessels.

Ceramic fragments from the Middle Ages

Medieval ceramic vessel

Terra sigillata

A total of 28 fragments of Terra sigillata pottery were found. It is luxury ceramics used throughout the Roman Empire from the 1st century BC to the 3rd century AD. It is orange or light red, and it's polished. The term literally means ware made of clay impressed with a design. There are no decorations on the objects.

Remains visible on the surface were found in 2018. Bank blade is one of the most significant objects found in Ravne 3 tunnels. It dates back to the Roman era, and it is well known in science that the Romans were present in Bosnia and Herzegovina until the beginning of the 5th century AD. Similar analogies with this object were found in several different locations in Bosnia and Herzegovina, such as Mogorjelo near Čapljina, Panik near Bileća, and Proboj near Ljubuški. A typological classification has also been determined, which recognises three types of bank blades - A, B, and C. The specimen from the Ravne 3 tunnel is classified as type A, which has a tubular handle. Analogies similar to type A were found both in Sremska Mitrovica and Kosovo.

Five pieces of tegula were found. Tegulas, together with imbrex (latimbricies/ tegulae), form a roof of a building. They were used in ancient Greece and Roman architecture as waterproof building covers. They were made of baked clay, but sometimes also of marble or bronze. The tegulas usually had a flat surface. The imbrex had semi-circular canals, which fit between two tegulas, so that water would not pass through.

The ornament on the tegula is probably some kind of braided ornament as well as variants of the random strokes that the masters left on the clay by dragging their fingers. The tegulas usually have seals of the workshops or military units that produced them.

Piece of jewelry - a pendant

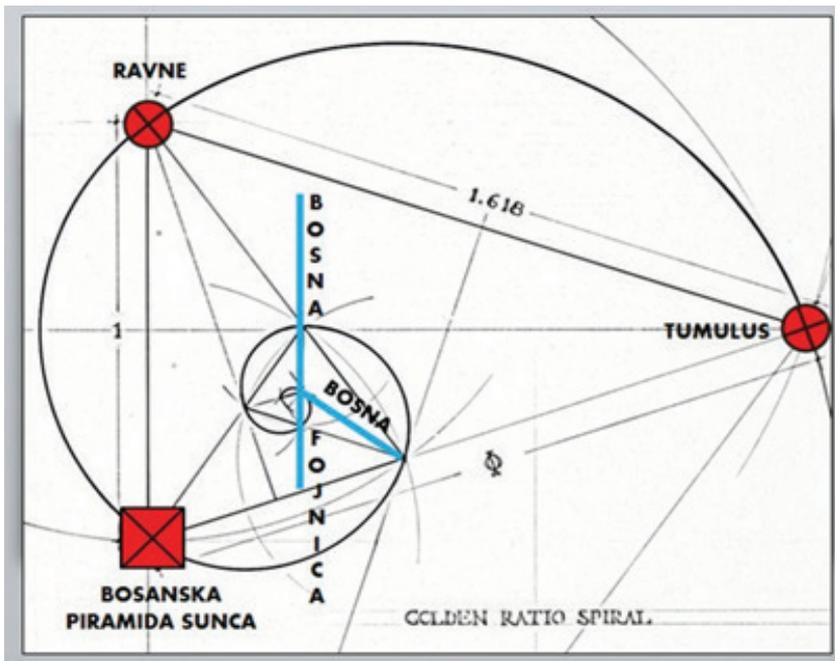

The material this object is made of is bronze. It is small, 1.5 cm long and high, with three holes on the side. On the surface of the object is a floral motif, or an animal head motif, depending on the eye of the beholder. It is possible that the object was under Celtic influence, and it dates from the Roman period.

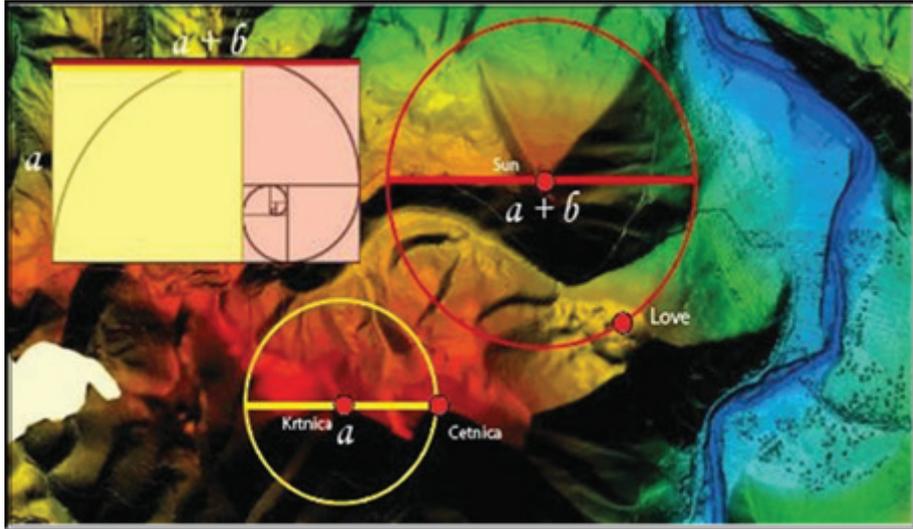

91. FANTASTIC DISCOVERIES IN VISOKO IN 2021

The expert team of the “Archaeological Park: Bosnian Pyramid of the Sun” Foundation announced the results of the Uranium-Thorium dating of the stalagmite found above the drywall: age - 19,000 years! This means that the drywall was built much earlier and is proof of the oldest construction in Europe!!!

Incredible Sacral geometry of the Bosnian pyramids: In the placement of objects (pyramids and tunnels) in the Bosnian Valley of the Pyramids, two spirals with the golden section, an equilateral and isosceles triangles were discovered, surpassing the placement of the Giza pyramids. Ingenious astronomical characteristics of the Bosnian pyramids: The shadow of the Bosnian Pyramid of the Sun forms a ‘pyramid’ that completely covers the western side of the Bosnian Pyramid of the Moon in midsummer. At the beginning of the summer, it forms a ‘pyramid’ of the same height on the south side, and at the beginning of autumn it forms a ‘pyramid’ of the same height on the north side.

92. GREAT MEASUREMENT RESULTS OF ENERGY VALUES IN RAVNE TUNNELS IN 2022

Regular measurements of energy parameters in Ravne tunnels show the existence of an amazing healing environment.

The expert team of the “Archaeological Park: Bosnian Pyramid of the Sun” Foundation carried out measurements on March 7, 2022. The weather was cold with an ambient temperature of -1 °C and a high humidity of 92%. It was snowing.

The temperature in the Ravne tunnels is stable, in the range of 12 to 14 °C. The humidity is at its normal level of 83%. These two values are very important for the structural stability of the tunnel.

The oxygen level ranges from 19.5 to 20.9%, which is good. Even at depths of 350 m you can breathe perfectly well.

The level of harmful radioactivity in the environment is 0.12 µSv, and in the tunnels it is even twice as low. This is far from dangerous levels for human health, which are thousands of times higher.

There is no harmful electromagnetism (EM smog) in the tunnels, and no harmful mobile phones and the Wi-Fi signals.

The level of orgone or life energy is 50% or even 100% higher than it is outside.

The concentration of negative ions near the Foundation’s souvenir shop was 350 pcs/cm³. A healing level of 12,000 pcs/cm³ was already reached beside the egg-shaped ceramic block, beside block K-2 it was a brilliant 33,000 pcs/cm³, and on the new roundabout between K-2 and K-5, 36,000 pcs/cm³. Again, the highest values were on the Meditation healing route number 3, where they surpassed 65,000 pcs/cm³.

CONCLUSION

The arrogance and closed-mindedness of the majority of experts who hold positions at universities and scientific institutes must be replaced by readiness to receive new knowledge. Our distant past is different from the one we are taught, and which is dogmatically imposed on us. The history of advanced human societies is much longer than what is officially recognized. Many cultures in the past developed, reached their peaks, and then disappeared, most often in cataclysmic events. Pyramids, as key structures, were at the centre of many societies from the distant past. They were built in North and South America, Africa, Asia, Australia, and Europe. A multitude of astronomical, mathematical, and geometrical knowledge was incorporated into thousands of these structures. The pyramids stored information about societies. They are also spiritual centres. The pyramids, perhaps the most important and mysterious structures, are generators of several types of energy with an extremely important impact on the environment.

In the 21st century, the science of pyramids will become an important instrument that will open the door to a new world where physical, energy, and spiritual aspects are intertwined. This is the only way we will be able to fully explain the purpose and function of these structures. The discovery of the Bosnian pyramid complex in Visoko is extremely important for the creation of a new scientific paradigm. We have to say goodbye forever to the old world, the surviving concepts, methods, and closed-mindedness. Multidisciplinary scientific research, with a combination of classic and modern satellite methods, GPR and thermal techniques, sophisticated dating and alternative methods, will help us gain knowledge of advanced cultures from the past.

There we will find many answers to the questions that pressure our civilization and we will get off the wrong road we are on. Unlike the ancient civilizations, we have lost the balance between the spiritual and the material, and we have become alienated from nature.

Let us surround ourselves with a positive atmosphere on this path. It is no coincidence that I named one of the pyramids in Bosnia and Herzegovina the Pyramid of Love. We know words are powerful, and the strongest of all is the word love. When a huge pyramid bears such a name, then we color the entire Visoko valley with love.

Let us enjoy discovering something new or something long forgotten. That is the beauty of research.

AUTHOR

Discoverer of the Bosnian pyramids and Principal Investigator of the Project (2005 to present). Ph.D. on Mayan pyramids, University of Sarajevo, Bosnia-Herzegovina (2007). Director of Center for Archaeology at American University in Bosnia-Herzegovina (2011-2012), Founder of “Archaeological Park: Bosnian Pyramid of the Sun” Foundation, Sarajevo (2005 to present). Honorable Member of the Bosnian Academy of Science and Art ‘Kulin Ban’, Foreign member of Russian Academy of Natural Sciences, Moscow, Russia (2007) and Croatian Academy of Science and Art in Diaspora, Basel, Switzerland (2015).

Author of 18 books on pyramids around the world and ancient civilizations, translated into 17 languages (1986 to present). First “Honorable citizen” of the town of Visoko (2006). “Man of the Year” in Bosnia-Herzegovina (2021 and 2007). Recipient of the United States Congressional Certificate of Recognition (2013) “for continuous support in promoting cultural and economic independence for people new to the USA.” First honoree of the Amelia B. Edwards Award for “outstanding research and advancement of knowledge of pyramids around the world”, Chicago, USA (2016). Awarded “Diamond in the Pyramid Science”, Bengaluru, India (2016) “for having done exceptional outstanding fundamental work in creating basic awareness for the Pyramid energy power”.
